CONSOLIDATED AUDITED ANNUAL FINANCIAL STATEMENTS

AND MANAGEMENT'S DISCUSSION & ANALYSIS

A. Consolidated Audited Annual Financial Statements

Edgar Filing: TRANSALTA CORP - Form 40-F

For consolidated audited annual financial statements, including the report of independent chartered accountants with respect thereto, see pages 69 through 109 of the TransAlta Corporation 2007 Annual Report to shareholders included herein. See Exhibit 13.4 for the related supplementary note entitled "Reconciliation to United States Generally Accepted Accounting Principles" for a reconciliation of the important differences between Canadian and United States generally accepted accounting principles.

B. Management's Discussion & Analysis

For management's discussion & analysis, see pages 27 through 68 of the TransAlta Corporation 2007 Annual Report to shareholders included herein under the heading Management's Discussion & Analysis.

For the purposes of this Form 40-F, only pages 69 through 109 and 27 through 68 of the TransAlta Corporation 2007 Annual Report to shareholders as referred to above shall be deemed incorporated herein by reference and filed, and the balance of such 2007 Annual Report, except as otherwise specifically incorporated by reference in the TransAlta Corporation Annual Information Form filed as Exhibit 13.1 hereto, shall not be deemed to be filed under the Exchange Act with the Securities and Exchange Commission as part of this Form 40-F.

DISCLOSURE CONTROLS AND PROCEDURES

As required by Rule 13a-15 under the Securities Exchange Act of 1934, management has evaluated, with the participation of our Chief Executive Officer and Chief Financial Officer, the effectiveness of our disclosure controls and procedures as of the end of the period covered by this report. Disclosure controls and procedures refer to controls and other procedures designed to ensure that information required to be disclosed in the reports we file or submit under the Exchange Act are recorded, processed, summarized and reported, within the time periods specified in the rules and forms of the Securities and Exchange Commission. Disclosure controls and procedures include, without limitation, controls and procedures designed to ensure that information required to be disclosed by us in our reports that we file or submit under the Exchange Act is accumulated and communicated to management, including our Chief Executive Officer and Chief Financial Officer, as appropriate to allow timely decisions regarding our required disclosure. In designing and evaluating our disclosure controls and procedures, management recognizes that any controls and procedures, no matter how well designed and operated, can provide only reasonable assurance of achieving the desired control objectives, and management was required to apply its judgment in evaluating and implementing possible controls and procedures. Based on the foregoing evaluation, our Chief Executive Officer and Chief Financial Officer have concluded that, as of December 31, 2007, the end of the period covered by this report, our disclosure controls and procedures were effective at a reasonable assurance level.

MANAGEMENT'S REPORT ON INTERNAL CONTROL

OVER FINANCIAL REPORTING

Management is responsible for establishing and maintaining adequate internal control over financial reporting.

Internal control over financial reporting refers to a process designed by, or under the supervision of, our chief executive officer and chief financial officer and effected by our board of directors, management and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

- pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of our assets;

- provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that our receipts and expenditures are being made only in accordance with authorizations of our management and members of our board of directors; and
- provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of our assets that could have a material effect on our financial statements.

Management evaluated the effectiveness of our internal control over financial reporting as of December 31, 2007 using the framework set forth in the report of the Treadway Commission's Committee of Sponsoring Organizations (COSO), Internal Control - Integrated Framework. Management has concluded that our internal control over financial reporting was effective as of December 31, 2007. Certain matters relating to the scope of Management's evaluation and limitations of management's conclusions are described below. See Limitations and Scope of Management's Report on Internal Control over Financial Reporting.

Our independent registered public accounting firm, Ernst & Young LLP, has issued an audit report expressing an opinion on the effectiveness of our internal control over financial reporting as of December 31, 2007. For Ernst & Young LLP's report see page 71 of the TransAlta Corporation 2007 Annual Report to shareholders under the heading Independent Auditors' Report on Internal Controls Under Standards of the Public Company Accounting Oversight Board (United States).

There has been no change in the internal control over financial reporting during the year covered by this report that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

LIMITATIONS AND SCOPE OF MANAGEMENT'S

REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING

Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process, and it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Management has not evaluated the internal controls of the Sheerness, CE Generation and Genesee 3 joint ventures (collectively, the Excluded Entities), in accordance with Frequently Asked Question No. 1, Management's Report on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, of the Office of the Chief Accountant of the Division of Corporation Finance of the U.S. Securities and Exchange Commission (revised Oct. 6, 2004). Accordingly, management's evaluation of the Company's internal control over financial reporting did not include an evaluation of the internal controls of any of the Excluded Entities, and management's conclusion regarding the effectiveness of the Company's internal control over financial reporting does not extend to the internal controls of any of the Excluded Entities.

Proportionate consolidation of the Excluded Entities contributes to the Company's financial statements in the amount of \$1,477.0 million of the Company's total assets, \$706.6 million of net assets, \$491.4 million of revenues and \$95.7 million of operating income. The Company's financial statements include the accounts of the Excluded Entities, accounted for via proportionate consolidation, in accordance with EITF 00-1, but management has been unable to assess the effectiveness of internal control at the Excluded Entities because the Company does not have the ability to dictate or modify the controls of the Excluded Entities and does not have the ability, in practice, to assess those controls.

AUDIT COMMITTEE FINANCIAL EXPERT

The Registrant's board of directors has determined that it has at least one audit committee financial expert serving on its Audit and Risk Committee (the ARC). Mr. William D. Anderson has been determined to be an audit committee financial expert, within the meaning of Section 407 of the United States Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley), and is independent, as that term is defined by the New York Stock Exchange's (NYSE) listing standards applicable to the Registrant. Mr. Gordon S. Lackenbauer has also been determined to be an audit committee financial expert for purposes of Section 407 of Sarbanes-Oxley and independent under the applicable NYSE listing standards. Under Securities and Exchange Commission rules the designation of persons as audit committee financial experts does not make them experts for any other purpose, impose any duties, obligations or liability on them that are greater than those imposed on members of their committee and the board of directors who do not carry this designation or affect the duties, obligations or liability of any other member of their committee.

CODE OF ETHICS

The Registrant has adopted a code of ethics as part of its Corporate Code of Conduct that applies to all employees and officers which has been filed with the SEC. In addition, the Registrant has adopted a code of conduct applicable to all directors of the Company and a separate financial code of conduct which applies to all financial management employees. The Registrant's Corporate Codes of Conduct are available on its Internet website at www.transalta.com. There has been no waiver of the codes granted during the 2007 fiscal year.

PRINCIPAL ACCOUNTANT FEES AND SERVICES

For the years ended December 31, 2007 and 2006, Ernst & Young LLP and its affiliates were paid approximately \$2,838,740 and \$3,596,689, respectively, as detailed below:

	Year-ended December 31	
	2007	2006
Ernst & Young LLP		
Audit Fees	\$ 2,623,699	\$ 3,286,212
Audit-Related Fees	\$ 168,968	\$ 300,892
Tax Fees	\$ 45,743	\$ 9,585
All Other Fees	\$	\$
Total	\$ 2,838,740	\$ 3,596,689

No other audit firms provided audit services in 2007 or 2006.

The nature of each category of fees is described below.

Audit Fees

Audit fees were paid for professional services rendered by the auditors for the audit of the Company's annual financial statements or services provided in connection with statutory and regulatory filings or engagements, including the translation from English into French of the Company's financial statements and other documents. Total audit fees paid in 2007 include payments related to 2007 in the amount of \$1,147,390 and for 2006 in the amount of \$1,476,309. Total audit fees for 2006 include payments related to 2006 of \$1,193,763 and for 2005 in the amount of \$2,092,449.

Audit-Related Fees

The audit-related fees in 2007 and 2006 were primarily for work performed by Ernst & Young LLP in relation to the Corporation's financings.

Tax Fees

The majority of tax fees for 2007 related to the finalization of tax credit recoveries

Pre-Approval Policies and Procedures

The ARC has considered whether the provision of services other than audit services is compatible with maintaining the auditors' independence. The ARC has adopted a policy that prohibits the Company from engaging the auditors for prohibited categories of non-audit services and requires pre-approval of the ARC for other permissible categories of non-audit services, such categories as determined under Sarbanes-Oxley.

Percentage of Services Approved by the ARC

For the year ended December 31, 2007, none of the services described above were approved by the ARC pursuant to paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

OFF-BALANCE SHEET ARRANGEMENTS

See page 52 of Exhibit 13.3.

TABULAR DISCLOSURE OF CONTRACTUAL OBLIGATIONS

See page 51 of Exhibit 13.3 and page 99 under the heading "Commitments" of Exhibit 13.2.

IDENTIFICATION OF THE AUDIT COMMITTEE

The Registrant has a separately-designated standing ARC. The members of the ARC are:

William D. Anderson (Chair)

Timothy W. Faithfull

Michael M. Kanovsky

Gordon S. Lackenbauer

Donna S. Kaufman (ex-officio member)

FORWARD LOOKING INFORMATION

This document, documents incorporated herein by reference, and other reports and filings made with the securities regulatory authorities, include forward-looking statements. All forward looking statements are based on TransAlta's beliefs as well as assumptions based on information available at the time the assumption was made. In some cases, forward-looking statements can be identified by terms such as "may", "will", "believe", "expect", "potential", "enable", "continue" or other comparable terminology. These statements are not guarantees of TransAlta's future performance and are subject to risks, uncertainties and other important factors that could cause TransAlta's actual performance to be materially different from those projected. Some of the risks, uncertainties, and factors include, but are not limited to electricity demand and generation capacity, plant availability, cost and availability of fuel necessary for the production of electricity, legislative and regulatory developments, costs associated with environmental compliance, overall costs, competition, global capital markets activity, changes in prevailing interest rates, currency exchange rates, inflation levels and general economic conditions in geographic areas where TransAlta operates, results of financing efforts, changes in counterparty risk and the impact of accounting policies issued by Canadian and U.S. standard setters. Given these uncertainties, readers are cautioned not to place undue reliance on this forward-looking information, which is given as of the date hereof or otherwise, and TransAlta undertakes no obligation to update publicly or revise any forward-looking information, whether as a result of new information, future events or otherwise.

UNDERTAKING

TransAlta Corporation undertakes to make available, in person or by telephone, representatives to respond to inquiries made by the Commission staff, and to furnish promptly, when requested to do so by the Commission staff, information relating to: the securities registered pursuant to Form 40-F; the securities in relation to which the obligation to file an annual report on Form 40-F arises; or transactions in said securities.

SIGNATURES

Pursuant to the requirements of the Exchange Act, the Registrant certifies that it meets all of the requirements for filing on Form 40-F and has duly caused this annual report to be signed on its behalf by the undersigned, thereto duly authorized, in the City of Calgary, Province of Alberta, Canada.

PRESENTATION OF INFORMATION

Edgar Filing: TRANSALTA CORP - Form 40-F

Unless otherwise noted, the information contained in this annual information form (Annual Information Form) is given as at or for the year ended December 31, 2007. Amounts are expressed in Canadian dollars unless otherwise indicated. Financial information is presented in accordance with Canadian generally accepted accounting principles.

SPECIAL NOTE REGARDING FORWARD-LOOKING STATEMENTS

This Annual Information Form, the documents incorporated by reference in this Annual Information Form, and other reports and filings made with the securities regulatory authorities in Canada and the United States include forward-looking statements. All forward-looking statements are based on TransAlta Corporation's (TransAlta or the Corporation) beliefs and assumptions from information available at the time the assumption was made. In some cases, forward-looking statements can be identified by terms such as may, will, believe, expect, potential, enable, continue or other comparable terminology. Forward-looking statements relate to, among other things, statements regarding the anticipated business prospects and financial performance of TransAlta. These statements are not guarantees of TransAlta's future performance and are subject to risks, uncertainties and other important factors that could cause TransAlta's actual performance to be materially different from those projected, including those material risks discussed in this Annual Information Form under the heading Risk Factors, and in TransAlta's Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) for the year ended December 31, 2007 under the heading Risk Factors and Risk Management. The material assumptions in making these forward-looking statements are disclosed in the MD&A under Outlook, Risk Factors and Risk Management and Critical Accounting Policies and Statements, and in this Annual Information Form under Competitive Environment, and Competitive Strengths. Given these uncertainties, the reader should not place undue reliance on this forward-looking information, which is given as of the date it is expressed in this Annual Information Form or otherwise, and TransAlta undertakes no obligation to update publicly or revise any forward-looking information, whether as a result of new information, future events or otherwise.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta's MD&A for the year ended December 31, 2007 and TransAlta's Audited Consolidated Financial Statements for the year ended December 31, 2007 are hereby specifically incorporated by reference in this Annual Information Form. Copies of these documents are available on SEDAR at www.sedar.com.

CORPORATE STRUCTURE

Name and Incorporation

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta was formed by Certificate of Amalgamation issued under the *Canada Business Corporations Act* on October 8, 1992. On December 31, 1992 a Certificate of Amendment was issued in connection with a plan of arrangement involving the Corporation and TransAlta Utilities Corporation (TransAlta Utilities) under the *Canada Business Corporations Act*. The plan of arrangement, which was approved by shareholders on November 26, 1992, resulted in common shareholders of TransAlta Utilities exchanging their common shares for shares of the Corporation on a one-for-one basis. Upon completion of the arrangement, TransAlta Utilities became a wholly-owned subsidiary of TransAlta. The registered office and principal place of business of TransAlta is at 110 - 12th Avenue S.W., Calgary, Alberta, Canada, T2R 0G7.

Information relating to TransAlta Utilities is set forth in TransAlta Utilities Annual Information Form for the year ended December 31, 2007, a copy of which is available on SEDAR at www.sedar.com.

Intercorporate Relationships

Edgar Filing: TRANSALTA CORP - Form 40-F

The principal subsidiaries of the Corporation and their respective jurisdictions of formation are set out below.

Unless the context otherwise requires, all references to the Corporation and to TransAlta herein refer to TransAlta Corporation and its subsidiaries, including TransAlta Utilities and TransAlta Energy Corporation (TransAlta Energy).

OVERVIEW

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta and its predecessors have been engaged in the production and sale of electric energy since 1911. The Corporation is among Canada's largest non-regulated wholesale electricity generation and energy marketing companies with an aggregate net ownership interest of approximately 8,488 megawatts (MW) of electrical generating capacity (1) in facilities having approximately 10,209 MW of aggregate gross electrical generating capacity. The Corporation is focused on generating electricity in Canada, the United States, Mexico and Australia through its diversified portfolio of facilities fuelled by coal, gas, hydro, wind and geothermal resources. The following is a brief overview of the Corporation's principal facilities.

In Canada, the Corporation holds a net ownership interest of approximately 5,634 MW of electrical generating capacity in thermal, gas-fired, wind-powered and hydroelectric facilities, including 4,937 MW in Alberta and 697 MW in Ontario.

Note:

(1) TransAlta measures capacity as net maximum capacity (see glossary for definition of this and other key terms) which is consistent with industry standards. Capacity figures represent capacity owned and in operation unless otherwise stated.

In the United States, the Corporation's principal facilities include a 1,404 MW thermal facility and a 248 MW gas-fired facility, both located in Centralia, Washington, which supply electricity to the Pacific northwest. The Corporation holds a 50 per cent interest in CE Generation, LLC ("CE Generation"), resulting in an aggregate net ownership interest of approximately 385 MW of geothermal and gas fired electrical generating capacity in facilities in California, Texas, Arizona and New York. The Corporation also has 6 MW of electrical generating capacity through gas-fired and hydroelectric facilities located in Washington and Hawaii.

In Mexico, the Corporation owns two facilities with a combined capacity of 511 MW. (See "Recent Developments" below in this AIF for updated information regarding the Mexican assets.)

The Corporation also has 300 MW of net electrical generating capacity in Australia.

The Corporation is organized into two business segments: Generation and Corporate Development and Marketing. The Generation group is responsible for constructing, operating and maintaining electricity generation facilities. The Commercial Operations Development group is responsible for managing the sale of production, purchases of natural gas, transmission capacity and market risks associated with the Corporation's generation assets and for non-asset backed trading activities. Both segments are supported by a corporate group which includes finance, treasury, legal, human resources and other administrative functions. The corporate group is also responsible for the Corporation's sustainable development initiatives, including investments in renewable energy resources.

GENERAL DEVELOPMENT OF THE BUSINESS

Edgar Filing: TRANSALTA CORP - Form 40-F

The significant events and conditions affecting TransAlta's business during the last three financial years are summarized below. Certain of these events and conditions are discussed in greater detail under the heading "Business of TransAlta" in this Annual Information Form.

Recent Developments

- On February 20, 2008, the Corporation announced it had signed a purchase and sale agreement with Intergen Global Ventures B.V. pursuant to which Intergen agrees to pay the Corporation US \$303.5 million in cash for its Mexican assets.
- On February 13, 2008, the Corporation announced that, commencing in 2009, it would be constructing a 66 MW wind generation facility in southern Alberta, consisting of 22 Vestas V90 3 MW wind turbines. The total capital costs for this Blue Trail wind power project is expected to be \$115 million. The capacity from this project is expected to be sold on the spot market.
- On February 1, 2008, the Board of Directors of the Corporation announced it had approved an increase to the annual dividend to holders of common shares from \$1.00 per share to \$1.08 per share.

Year Ended December 31, 2007

- During the third quarter, the Corporation completed an uprate on the Sundance Unit 4 facility. A final measurement took place in the fourth quarter of 2007 and the generating capacity added as a result of this uprate was 53 MW.
- On September 11, 2007, the Corporation announced it had received regulatory approval to increase the number of shares it may purchase under its Normal Course Issuer Bid (NCIB) program. The Corporation may now purchase for cancellation up to 20.2 million shares or approximately 10 per cent of the 202 million common shares issued and outstanding as of April 23, 2007.
- On July 17, 2007, the Corporation amended the power purchase agreement with New Brunswick Power Distribution and Customer Service Corporation (New Brunswick Power) to increase capacity from 75 MW to 96 MW.

MW. As a result, total capital costs for the Kent Hills wind power project will also increase by \$40 million, from \$130 million to \$170 million. The Corporation also signed a purchase and sale agreement with Vector Wind Energy, a wholly owned subsidiary of Canadian Hydro Developers Inc., to acquire its Fairfield Hill wind power site, including an option to develop the site at a future date.

- On June 21, 2007, TransAlta Utilities entered into an agreement with Bucyrus Canada Limited and Bucyrus International Inc. for the purchase of a dragline to be used primarily in the supply of coal for the Keephills 3 joint venture project. The total dragline purchase costs are approximately \$150 million, with final payments for goods and services due by May 2010. The total payments made under this agreement in 2007 were \$18 million.
- On February 26, 2007, the Corporation and EPCOR Power Development Corporation (EPCOR) announced that they were proceeding with building the 450 MW Keephills 3 power project located approximately 70 kilometres west of Edmonton, Alberta. The capital cost for the project, including mine capital, is expected to be approximately \$1.6 billion. Through the Keephills 3 Limited Partnership (K3LP), an affiliate of the Corporation, TransAlta and EPCOR will be equal partners in the ownership of Keephills 3, with TransAlta Energy responsible for managing the joint venture and EPCOR responsible for the construction. Upon completion, which is expected at the end of the first quarter in 2011, TransAlta Utilities will operate the facility and EPCOR and TransAlta will independently dispatch and market their share of the unit s electrical output. The project has received approval from the Alberta Energy and Utilities Board and from Alberta Environment.
- On January 19, 2007, the Corporation announced that it had been awarded a 25-year Power Purchase Agreement (PPA) to provide 75 MW of wind power to New Brunswick Power. Under the agreement, TransAlta will construct, own and operate a wind power facility in New Brunswick. The capital cost of the project is estimated to be \$130 million. The project is subject to regulatory and environmental approvals and is expected to begin commercial operations by the end of 2008. Natural Forces Technologies Inc., an Atlantic Canada based wind developer, is TransAlta s co-development partner in this project.
- On January 2, 2007, the Corporation redeemed, at par, all of its outstanding 7.75 per cent preferred securities, with an outstanding principal amount of \$175 million.

Year ended December 31, 2006

- On December 18, 2006, TransAlta Utilities assigned its rights in the development agreement it held with EPCOR, governing the joint development of the Keephills 3 power project, to K3LP. K3LP subsequently sold a 50% undivided interest in the Keephills 3 power project to the EPCOR Power Development (K3) Limited Partnership and has entered into a joint venture agreement governing the continued development of the Keephills 3 power project. In the event the Keephills 3 power project proceeds to operation, TransAlta Utilities will be the operator of the project pursuant to an operations and maintenance agreement and coal supply agreement.
- On November 27, 2006, TransAlta announced it would immediately stop mining operations at its Centralia, Washington coal mine. TransAlta also announced that it had entered into agreements to purchase and transport coal from the Powder River Basin to fuel TransAlta s Centralia thermal facility.

- On November 17, 2006, TransAlta Utilities entered into a settlement agreement with Canadian National Railway Company for a portion of outstanding claims for lost margin and incremental expenses relating to the train derailment and resulting oil spill into Lake Wabamun in 2005. The terms of the settlement are subject to a confidentiality agreement and cannot be disclosed.
- On February 17, 2006, a wholly-owned subsidiary of TransAlta, together with a subsidiary of Mid-American Energy Company (Mid-American), entered into an agreement to purchase a 10 MW hydro facility in Hawaii to be held directly by the Wailuku Holding Company LLC, a company jointly and equally owned by TransAlta and Mid-American.
- On February 15, 2006, TransAlta announced it had signed a five-year agreement with the Ontario Power Authority (OPA) for the supply of electricity from TransAlta's Sarnia Regional Cogeneration Power Plant. Under the

terms of the agreement, Transalta will be available to supply an average of 400 MW of electricity to the Ontario electricity market. The supply contract is effective until December 31, 2010.

- On February 1, 2006, TransAlta Utilities entered into a development agreement with EPCOR to jointly pursue the Keephills 3 power project. Keephills 3 is a proposed 450 MW facility adjacent to TransAlta's existing Keephills facility, approximately 70 kilometres west of Edmonton, Alberta.

Year ended December 31, 2005

Edgar Filing: TRANSALTA CORP - Form 40-F

- On December 9, 2005, the Corporation announced that its wholly-owned subsidiary, TransAlta Energy Marketing (U.S.) Inc. had entered into an agreement for the sale of generation from the Corporation's Centralia generating facility for the period from January 1, 2007 to December 31, 2010. The agreement has a value of approximately US \$450 million.
- On September 12, 2005, the Corporation announced that its 279 MW Wabamun Unit 4 generating facility had resumed full operations on September 11, 2005 following the successful implementation of its return to service plan. TransAlta was forced to shut down the Wabamun facility on August 3, 2005 due to a train derailment and resulting oil spill into Lake Wabamun, Alberta. The Wabamun unit was on standby until an appropriate return to service plan was developed and reviewed with regulators and Canadian National Railway Company. The Corporation estimated operating income was impacted by \$15 to \$18 million as a result of the Wabamun shutdown.
- On March 1, 2005, the Corporation announced the completion of the 450 MW Genesee 3 generating facility, a joint venture between the Corporation and EPCOR. See Generation Business Segment - Alberta - Thermal facilities .
- On February 15, 2005, the Corporation redeemed, at par, all of its outstanding 7.5 per cent and 8.15 per cent preferred securities, with an outstanding principal amount of \$175 million and \$125 million, respectively.
- On January 3, 2005, the Corporation announced that it had shut down and retired Units 1 (62 MW) and 2 (57 MW) of its Wabamun facility, effective December 31, 2004. See Generation Business Segment - Alberta - Thermal facilities .

BUSINESS OF TRANSALTA

Generation Business Segment

Edgar Filing: TRANSALTA CORP - Form 40-F

The following table summarizes the Corporation's generation facilities which are operating, under construction or under development, as at January 31, 2008:

Region	Facility	Capacity (MW)	Ownership (%)	Net Capacity Ownership Interest	Fuel	Revenue Source	Contract Expiry Date
Canada	Keephills	766	100	766	Coal	Alberta PPA	2020
Alberta	Sheerness	780	25	195	Coal	Alberta PPA	2020

	Sheerness Unit No. 2	390	25	1990
Genesee	Genesee 3	450	50	2005
Total		4,798		

Notes:

Edgar Filing: TRANSALTA CORP - Form 40-F

- (1) Wabamun unit 4 is expected to be removed from service upon the expiry of its license in 2010.
- (2) Facility under development.

The Keephills, Sundance and Wabamun facilities (the Alberta thermal plants) are located approximately 70 kilometres west of Edmonton, Alberta and are owned by the Corporation. The Sheerness facility is jointly owned by TransAlta Cogeneration, L.P. (TA Cogen), an Ontario limited partnership, and ATCO Power (2000) Ltd. (ATCO Power). The Genesee facility is jointly owned by the Corporation and EPCOR. The Corporation completed the sale of its 50 per cent interest in the Sheerness facility to TA Cogen on July 30, 2003. The Corporation's thermal plants are generally base load plants, meaning that they are expected to operate for long periods of time at or near their rated capacity.

Availability(1) is an important measure of the economic success of a thermal plant. The weighted equivalent availability factor for the Alberta thermal plants in 2007 was 87.1 per cent compared with 88.7 percent in 2006, 87.6 per cent in 2005 and 86.5 per cent in 2004. For the Sheerness facility, the weighted equivalent availability factor was 94.4 percent in 2007 compared to 92.2 percent in 2006, 91.0 per cent in 2005 and 90.2 per cent in 2004. For the Genesee 3 facility, the weighted equivalent availability factor was 92.9 percent in 2007 compared to 96.9 per cent in 2006 and 91.8 per cent in 2005.

Fuel requirements for TransAlta's thermal power facilities are supplied by surface strip coal mines located in close proximity to the facilities. TransAlta owns two surface mines in Alberta that supply coal to its Alberta thermal plants. The Whitewood mine supplies the Wabamun plant and the Highvale mine supplies the Sundance and Keephills facilities. TransAlta estimates that the recoverable coal reserves contained in these mines are potentially sufficient to supply the anticipated requirements for the life of these facilities including possible life extension and plant expansion.

Coal for the Sheerness facility is provided from the adjacent Sheerness mine. The coal reserves of the mine are owned, leased or controlled jointly by TA Cogen, ATCO Power and Prairie Mines & Royalties Limited (PMRL). TA Cogen and ATCO Power have entered into coal supply agreements with PMRL, which operates the mine, to supply coal until 2026.

Note:

Edgar Filing: TRANSALTA CORP - Form 40-F

- (1) Availability means the weighted average equivalent availability factor and is defined in the glossary of terms (Appendix B).

Coal for the Genesee 3 facility is provided from the adjacent Genesee mine. The coal reserves of the mine are owned, leased or controlled jointly by PMRL and EPCOR. The Corporation has entered into coal supply agreements with PMRL, which operates the mine, to supply coal for the life of the facility.

In February 2001, the Corporation announced a proposal for a 900 MW expansion at its Keephills facility. Although the Corporation received regulatory approval to proceed with the expansion, an application was made to the AEUB to amend its 900 MW permit to allow for the construction of a smaller 450 MW facility using improved technology.

On February 1, 2006, the Corporation entered into a development agreement with EPCOR to jointly pursue the Keephills 3 power project. On December 18, 2006, the Corporation assigned its rights in the development agreement which it held with EPCOR for the joint development of the Keephills 3 power project to K3LP, an affiliate of the Corporation. K3LP subsequently sold a 50% undivided interest in the Keephills 3 power project to the EPCOR Power Development (K3) Limited Partnership and has entered into a joint venture agreement governing the continued development of the Keephills 3 power project.

On February 26, 2007, the Corporation and EPCOR commenced construction of the net 450 MW Keephills 3 power project. The capital cost for the project, including mine capital, is expected to be approximately \$1.6 billion. Through K3LP, TransAlta and EPCOR will be equal partners in the ownership of Keephills 3, with TransAlta Energy responsible for managing the joint venture and EPCOR responsible for construction. Upon completion, which is expected at the end of the first quarter in 2011, TransAlta Utilities will operate the facility and EPCOR and TransAlta will independently dispatch and market their share of the unit's electrical output. Through a subsidiary, the Corporation will also provide coal to the facility through the Highvale mine. The project received approval from the Alberta Energy and Utilities Board and from Alberta Environment.

Gas-fired Facilities

The following table summarizes the Corporation's western Canadian gas-fired generation facilities:

Location	Plant	Capacity (MW)	Ownership (%)	Commissioning Dates
Lloydminster, SK	Meridian	220	25	1999
Fort McMurray, AB	Poplar Creek	356	100	2001
Fort Saskatchewan, AB	Fort Saskatchewan	118	30	1999
Total		694		

The Meridian plant is located in Lloydminster, Saskatchewan and is owned by TA Cogen and Husky Oil Operations Limited. The Meridian plant sells electricity to Saskatchewan Power Corporation, a crown corporation owned by the Province of Saskatchewan, and steam to a heavy oil upgrader in Lloydminster, Saskatchewan. The Corporation completed the sale of its 50 per cent interest in the Meridian facility to TA Cogen on December 1, 2004.

The Poplar Creek plant is located in Fort McMurray, Alberta and is owned by the Corporation. The Poplar Creek plant provides electricity and steam to Suncor Energy Inc.'s oil sands project. This 356 MW cogeneration plant became fully operational in the first quarter of 2001 and delivers approximately 200 MW of electricity and steam to Suncor Energy Inc. (Suncor). Any surplus power not used by Suncor is available for

Edgar Filing: TRANSALTA CORP - Form 40-F

sale by the Corporation to other parties, in which case Suncor is entitled to a share of that revenue, under certain conditions.

The Fort Saskatchewan plant is located in Fort Saskatchewan, Alberta and is owned by TA Cogen and Air Liquide Canada Inc . The 118 MW Fort Saskatchewan gas-fired combined cycle cogeneration plant in Alberta provides electricity and steam to Dow Chemical Canada Inc.

The Corporation's interests in the Meridian and Fort Saskatchewan facilities are held through TA Cogen. See TA Cogen .

Hydroelectric facilities

Edgar Filing: TRANSALTA CORP - Form 40-F

Location	Plant	Capacity (MW)	Ownership (%)	Commissioning Dates
Bow River System	Horseshoe	14	100	1911
	Kananaskis	19	100	1913, 1951
	Ghost	51	100	1929, 1954
	Cascade	36	100	1942, 1957
	Barrier	13	100	1947
	Bearspaw	17	100	1953, 1954
	Pocaterra	15	100	1955
	Interlakes	5	100	1955
	Spray	103	100	1951, 1960
	Three Sisters	3	100	1951
	Rundle	50	100	1951, 1960
North Saskatchewan River System	Brazeau	355	100	1965, 1967
	Bighorn	120	100	1972
Total		801		

The Corporation's hydroelectric facilities are primarily peaking plants, meaning they are generally only operated during times of peak demand.

Wind Generation Facilities

Edgar Filing: TRANSALTA CORP - Form 40-F

The following table summarizes the Corporation's wind generation facilities:

Location	Plant	Capacity (MW)	Ownership (%)	Commissioning Dates
Fort MacLeod	McBride Lake	76	50	2003
Pincher Creek	Castle River and Other	46	100	1997 - 2001
Pincher Creek	Summerview	70	100	2004
New Brunswick	Kent Hills (1)	96	100	2008
Alberta	Blue Trail (1)	66	100	2009
Total		354		

Note:

Edgar Filing: TRANSALTA CORP - Form 40-F

(1) Facility under development reflects expected capacity and commissioning date.

The Corporation owns and operates approximately 154 MW of net capacity (excluding facilities under development) and operates approximately 192 MW of capacity primarily in three wind farms in southwestern Alberta.

Castle River is a 42 MW facility comprised of 59 Vestas V47 (660 kW) turbines and 1 Vestas V44 (600 kW) turbine located at Pincher Creek, Alberta. The facility is 71 per cent contracted primarily to ENMAX Energy Corp. and is the sole Green Energy® provider to the City of Calgary's Ride the Wind Light Rail Transit program. The Corporation also owns and operates seven additional turbines totalling 4 MW primarily located in the Pincher Creek and Waterton areas of southwestern Alberta.

McBride Lake, one of Canada's largest wind generation facilities, is a 76 MW facility comprised of 114 Vestas V47 (660 kW) turbines located at Fort MacLeod, Alberta. It was constructed by the Corporation and was completed and producing electricity in the third quarter of 2003. McBride Lake is operated by the Corporation and is jointly owned with ENMAX Green Power Inc., with each partner owning a 50 per cent interest. The output from the facility is 100 per cent contracted in the form of a 20-year PPA with ENMAX. The Corporation is also entitled to receive Wind Power Production Incentive (WPPI) payments from the federal government at \$12/MWh in respect of the McBride Lake facility until 2013.

On October 13, 2004, TransAlta announced the commencement of commercial operations at its \$100 million Summerview 68 MW wind farm located approximately 15 kilometres northeast of Pincher Creek, Alberta. Along with an existing 1.8 MW turbine in the area, the Summerview facility, which comprises 38 x 1.8 MW turbines, brings the total owned wind generation capacity to approximately 152 MW and total operated capacity to approximately 189 MW. The Summerview

wind farm is a merchant facility but is entitled to receive WPPI payments from the Federal Government at \$10/MWh until 2014.

On January 19, 2007, the Corporation announced that it had been awarded a 25 year PPA to deliver 75 MW of wind power to New Brunswick Power. Under the agreement, TransAlta will construct, own and operate a wind power facility in New Brunswick. On July 17, 2007, the Corporation announced it had amended its power purchase agreement with New Brunswick Power from 75 MW to 96 MW bringing the total capital costs for the project to an estimated \$170 million. The project is subject to regulatory and environmental approvals and is expected to begin commercial operations by the end of 2008. The facility will use 3 MW turbines and once complete, will provide an estimated 280,000 MWh per year of electrical energy. Natural Forces Technologies Inc. (Natural Forces), an Atlantic Canada based wind developer is TransAlta's co-development partner in this project and Natural Forces has an option to purchase up to 17% of the Kent Hills project within 180 days of its completion.

The Corporation also signed a purchase and sale agreement with Vector Wind Energy, a wholly owned subsidiary of Canadian Hydro Developers Inc., for acquisition of its Fairfield Hill wind power site, located in New Brunswick, including the option to develop the site at a future date.

On February 13, 2008, the Corporation announced that, commencing in 2009, it would be constructing a 66 MW wind generation facility in southern Alberta, consisting of 22 Vestas V90 3 MW wind turbines. The total capital costs for this Blue Trail wind power project is expected to be \$115 million. The capacity from this project is expected to be sold on the spot market.

All of the electricity generated and sold by the Corporation's wind division is from generation facilities that are EcoLogo-certified. The Corporation is an EcoLogo-certified distributor of Alternative Source Electricity through Environment Canada's Environmental Choice program. EcoLogo certification is granted to products with environmental performance that meet or exceed all government, industrial safety and performance standards. The Corporation's wind facilities constructed after April 2001, also qualify for the Green E and Green Leaf certifications.

Alberta PPAs

Edgar Filing: TRANSALTA CORP - Form 40-F

All of the Corporation's Alberta thermal and hydroelectric facilities, other than the Wabamun and Genesee 3 facilities, operate under Alberta PPAs. The PPA for the Wabamun plant expired on December 31, 2003. The Alberta PPAs establish committed capacity and electrical energy generation requirements and availability targets to be achieved by each thermal plant, energy and ancillary services obligations for the hydroelectric plants, and the price at which electricity is to be supplied. The Corporation bears the risk or retains the benefit of volume variances (except for those arising from events considered to be *force majeure*, in the case of the thermal plants) and any change in costs (unless due to a change in law) required to maintain and operate the facilities.

Under the Alberta PPAs, for the formerly regulated thermal facilities, the Corporation is exposed to electricity price risk if availability declines below contracted levels (other than as a result of outages caused by an event of *force majeure*). In such circumstances, the Corporation must pay a penalty for the lost availability based upon a price equal to the 30-day rolling average of Alberta's market electricity prices. This rolling average provision attempts to mitigate price spikes that can occur as a result of sudden outages. The Corporation attempts to further mitigate this exposure by maintaining contracted and uncontracted capacity in the market, through operating and maintenance practices, and through hedging activities.

The Corporation's hydroelectric facilities are not contracted on a facility-by-facility basis; rather, facilities are aggregated in a single Alberta PPA which provides for financial obligations for energy and ancillary services based on hourly targets. These targeted amounts are met by the Corporation through physical delivery or third party purchases.

The Corporation's compensation under the Alberta PPAs is based on a pricing formula which replaced the cost of service regime that applied previously under utility regulation. Key elements of the pricing formula are the amount of common equity deemed to form part of the capital structure, the amount of risk premium attributable to deemed common equity and a recovery of fixed and variable costs. Common equity is deemed to be 45 per cent of total capital and the return on equity is set annually at a 4.5 per cent premium over the rate on a 10-year Government of Canada Bond.

The pricing formula includes a provision for site restoration costs of the thermal generating plants for the whole term of the PPA. Until 2017, if the costs recovered are insufficient, then the Corporation can apply to the Balancing Pool to recover the incremental portion. The Alberta PPAs include, as part of the capacity payment for hydroelectric operations, an amount for decommissioning.

The expiry dates for the Corporation's Alberta PPAs, range from 2013 to 2020. With the expiry of the PPA at the Wabamun facility, the Corporation procured an extension of the license to operate Unit four of the Wabamun facility until March 31, 2010. The Corporation holds various licenses from Alberta Environment and the AEUB to operate its other facilities, most of which are renewed every few years. The Corporation is evaluating life extension and may procure extensions of the licenses for the other facilities upon the expiry of each respective Alberta PPA. Upon the expiry of the Alberta PPAs and subject to procuring extension of the licenses, the Corporation will then be able to sell its electricity to the Alberta Power Pool and to third party purchasers through direct sales agreements. The Corporation is currently selling most of its electricity from the Wabamun facility on the spot market.

The Alberta PPAs (together with legislation which applies thereto) permit the Balancing Pool, an entity established by the Government of Alberta, directly or indirectly as successor to the power purchaser under the Alberta PPAs, to terminate the Alberta PPAs in certain circumstances. These termination provisions are similar to those found in some PPAs entered into by government-related power purchasers. The Corporation will be entitled to receive a lump sum payment in connection with any such termination, other than a termination resulting from the Corporation's default and will thereafter be able to sell the output from any affected facilities for its own account.

Canada: Ontario

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation's Ontario generating facilities are summarized in the following table:

Location	Plant	Capacity (MW)	Ownership (%)	Commissioning Dates
Sarnia	Sarnia	575	100	2003
Ottawa	Ottawa	68	50	1992
Mississauga	Mississauga	108	50	1992
Windsor	Windsor	68	50	1996
Total		819		

The Sarnia facility is owned by the Corporation. The Corporation acquired 135 MW of electric generation capacity in 2002, and in March 2003 the Corporation acquired the remaining 440 MW of capacity. The combined 575 MW facility provides steam and electricity to nearby facilities owned by Dow Chemical Canada Inc., Lanxess (formerly Bayer Inc.), Nova Chemicals (Canada) Ltd. and Suncor Energy Products Inc. On February 15, 2006, TransAlta announced that it had signed a five-year agreement with the OPA for production at its Sarnia facility. Under the terms of the contract, TransAlta will be available to supply an average of 400 MW of electricity to the Ontario electricity market. The supply contract is effective until December 31, 2010.

The Ottawa plant is owned by TA Cogen. It is a combined cycle cogeneration facility designed to produce 68 MW of electrical energy. This capacity is sold under a long-term contract with the Ontario Electricity Financial Corporation (OEFC), an agency of the Province of Ontario. This agreement expires in 2012. The Ottawa plant also provides thermal energy to the member hospitals and treatment centers of the Ottawa Health Sciences Centre, National Defence Medical Centre and the Perley and Rideau Veterans Health Centre.

The Mississauga plant is owned by TA Cogen. It is a combined cycle cogeneration facility designed to produce 108 MW of electrical energy. This capacity is contracted under a long-term contract with the OEFC which expires in 2017. The Mississauga Plant provided cogeneration services to Boeing Canada Inc. (Boeing) until July 2005 at which time Boeing exercised its right under the cogeneration services agreement to no longer take and pay for cogeneration services due to the recent closure of its manufacturing facility. Boeing remains entitled to any steam credits based on the total plant electricity generation revenue. On or prior to each of January 1, 2013, 2018 and 2023, Boeing may give notice to purchase the Mississauga Plant at fair market value. On January 1, 2028, all provisions under the cogeneration services agreement will

terminate and Boeing will have the option at that time to either require the removal of the Mississauga Plant from the leased lands or purchase the Mississauga Plant at its net salvage value.

The Windsor plant is owned by TA Cogen. It is a combined cycle cogeneration facility designed to produce 68 MW of electrical energy. Currently, 50 MW of the capacity is sold under a long-term contract to the OEFC. This agreement expires in 2016. The Windsor plant also provides thermal energy to Chrysler Canada Inc.'s minivan assembly facility in Windsor. In 2003, an agreement was reached with the OEFC to sell the remaining 18 MW to the Ontario power market when it is economic to do so.

United States

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation's generation facilities in the United States are summarized in the following table:

Location	Plant	Capacity (MW)	Ownership (%)	Commissioning Dates
Washington	Centralia Coal No. 1	702	100	1971
	Centralia Coal No. 2	702	100	1971
	Centralia Gas	248	100	2002
	Skookumchuk	1	100	1970
New York	Saranac	240	37.5	1994
California	Vulcan	34	50	1986
	Del Ranch	38	50	1989
	Elmore	38	50	1989
	Leathers	38	50	1990
	CE Turbo	10	50	2000
	Salton Sea I	10	50	1987
	Salton Sea II	20	50	1990
	Salton Sea III	50	50	1989

	Salton Sea V	49	50	2000
Texas	Power Resources	200	50	1988
Arizona	Yuma	50	50	1994
Hawaii	Wailuku	10	50	1993
Total		2,480		

Centralia

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation owns a two-unit 1,404 MW thermal facility, an adjacent coal mine and a 248 MW gas-fired facility in Centralia, Washington, located south of Seattle. The Corporation also owns a 1 MW hydro-electric generating facility and related assets on the Skookumchuk River near Centralia, which facilities are used to provide reliable water supply to TransAlta's other generation facilities at Centralia. On November 27, 2006, the Corporation stopped all mining operations at its Centralia coal mine.

The Corporation has entered into a number of medium to long-term energy sales agreements from the Centralia facility. The Corporation also sells electricity from the Centralia facility into the Western Electricity Coordinating Council and, in particular, on the spot market in the U.S. Pacific Northwest energy market. The Corporation's strategy is to balance contracted and non-contracted sales of electricity to manage production and price risk.

The Corporation stopped mining operations at its Centralia coal mine on November 27, 2006. Prior to that date, the Centralia mine produced approximately five to six million tons of coal annually, or approximately 70 to 85 per cent of the Centralia plant's annual coal requirements. Although the Corporation estimates that certain coal reserves remain to be extracted, the Corporation has not yet received permits for, nor developed the new area, from which this coal could be produced. The Corporation has entered into contracts to purchase and transport coal from the Powder River Basin in Montana and Wyoming to fuel its facility until it is economic to pursue the extraction of coal at its Centralia mine.

CE Generation

Edgar Filing: TRANSALTA CORP - Form 40-F

On January 29, 2003, TransAlta announced the completion of the acquisition from El Paso Corporation (El Paso) of a 50 per cent interest in CE Generation, for total consideration of approximately US \$240 million, which included approximately US \$35 million for working capital. The CE Generation acquisition included the right to a 50 per cent interest in a geothermal project in the Imperial Valley, California. If TransAlta elects to retain an economic interest and participate in a future phase of this project, Salton Sea VI, TransAlta will be required to pay El Paso certain milestone payments of up to US \$10 million.

CE Generation, through its subsidiaries, is primarily engaged in the development, ownership and operation of independent power production facilities in the United States using geothermal and natural gas resources. CE Generation holds a net ownership interest of approximately 385 MW in 13 facilities, having an aggregate operating capacity of 829 MW, including 327 MW of geothermal generation in California and 490 MW of gas-fired cogeneration in New York, Texas and Arizona.

CE Generation affiliates currently operate 10 geothermal facilities in Imperial Valley, California. Each of the geothermal facilities, excluding CE Turbo and Salton Sea V, sells electricity pursuant to independent, long-term contracts which provide for energy payments, capacity payments and capacity bonus payments. Salton Sea V is currently a merchant facility; however, it has a PPA to sell approximately 20 MW of its net output. The balance of available capacity from Salton Sea V and CE Turbo is sold through market transactions.

CE Generation affiliates currently operate three natural gas-fired facilities in Texas, Arizona and New York State, having an aggregate generation capacity of 502 MW. The Arizona facility sells its output pursuant to long-term contracts while the Texas facility has contracted a tolling agreement for capacity. The New York facility sells its output pursuant to long-term contracts until 2009, after which point its capacity will be sold on the spot market.

Wailuku

On February 17, 2006, a subsidiary of TransAlta, together with a subsidiary of Mid-American entered into an arrangement to purchase a 10 MW hydro facility in Hawaii to be held directly by the Wailuku Holding Company LLC. Each of TransAlta and Mid American hold a 50 per cent interest in the facility. The facility sells electricity pursuant to the terms of a 30 year long-term contract with the Hawaii Electricity Light Company.

Mexico

Campeche

Edgar Filing: TRANSALTA CORP - Form 40-F

In May 2003, the Corporation announced the commencement of commercial operations at its 252 MW combined cycle gas or diesel fired facility located in the Mexican state of Campeche in the Yucatan Peninsula. The Corporation and Mexico's state owned Comisión Federal de Electricidad (CFE) have entered into a 25 year long-term contract for all of the output of this plant, commencing on the date commercial operations began. The Corporation has also entered into a related gas transportation agreement with CFE. In addition to the long-term contract and gas transportation agreement, the Corporation has entered into a corresponding 25 year fuel supply agreement with Pemex Gas y Petro Quimica Basica. CFE bears the price risk on fuel up to the guaranteed heat rate under the long-term contract.

Chihuahua

Edgar Filing: TRANSALTA CORP - Form 40-F

In September 2003, the Corporation announced the commencement of commercial operations at its 259 MW Chihuahua combined-cycle gas-fired facility located near Ciudad de Juarez, Mexico, located approximately 40 kilometres south of the United States/Mexico border. The Corporation has entered into a 25 year long-term contract with CFE for all of the output of this plant, commencing on the date commercial operations began, along with a 25 year gas transportation agreement. In addition, the Corporation has secured a 5 year gas supply contract. CFE bears the price risk on fuel up to the guaranteed heat rate under the long-term contract.

On February 20, 2008, the Corporation announced it had signed a purchase and sale agreement with Intergen Global Ventures B.V. pursuant to which Intergen agrees to pay the Corporation US \$303.5 million in cash for its Mexican assets.

Australia

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation holds interests in Western Australia consisting of the 110 MW Parkeston generation facility through a 50/50 joint venture with NP Kalgoorlie Pty Ltd, a subsidiary of Newmount Australia Limited, and the 245 MW Southern Cross gas and diesel generation facilities. Most of TransAlta's generation supplies two large mining companies through long-term capacity contracts and the remaining amount of surplus energy and capacity is sold into Australia's Wholesale Electricity Market which was introduced in Western Australia in late 2006.

TA Cogen

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation's interest in the 220 MW Meridian gas-fired generation facility in Saskatchewan, the 770 MW Sheerness thermal generation facility, the 118 MW Fort Saskatchewan gas-fired cogeneration facility in Alberta, and the Mississauga, Ottawa and Windsor-Essex facilities in Ontario, are held through TA Cogen, an Ontario limited partnership owned 50.01 per cent by subsidiaries of TransAlta and 49.99 per cent by Stanley Power Inc., a subsidiary of Cheung Kong Infrastructure Holdings Limited.

Commercial Operations Development

Edgar Filing: TRANSALTA CORP - Form 40-F

The Commercial Operations Development group provides a number of strategic functions to the Corporation, including the following:

- Gathering and assessing market intelligence, enabling management to more effectively engage in strategic planning and decision-making for the Corporation. This includes identifying and ranking markets which are the most attractive to enter, and developing strategies and plans to effectively compete in each market where the Corporation operates;
- Identifying specific opportunities to develop, acquire, or divest of generation assets in markets where the Corporation is operating or growing and completing the business arrangements so the Corporation can either make investment or divestiture decisions;
- Negotiating and entering into contractual agreements with customers for the sale of output from the Corporation's generating assets, including electricity, steam or other energy related commodities;
- Scheduling physical deliveries of natural gas supplies used to generate electricity and the electrical generation outputs from each asset to meet contractual obligations while managing the physical and financial risks associated with the generation and transmission of electrical energy, including during those periods of unplanned outages;
- Increasing the value of electricity output and fuel inputs from each generating asset through a variety of regional portfolio optimization strategies in both the current year and over the long-term; and,
- Recommending optimum maintenance schedules and operating levels according to current and anticipated market conditions that will maximize earnings from each of the generation assets.

Beyond these functions, the Commercial Operations Development group derives additional revenue and earnings from the wholesale trading of electricity and other energy related commodities and derivatives.

The group seeks to manage and limit risk exposures from both financial and physical positions, as well as counterparty risks. The key risk control activities of the Commercial Operations Development group, in conjunction with other functions of the Corporation, include credit review approval and reporting, risk measurement monitoring and reporting, validation of transactions, and trading portfolio valuation monitoring and reporting.

The Corporation uses mark-to-market valuation and the application of a value at risk (VAR) determination for risk control practices for its trading portfolios. This approach is a measure of assessing the potential trading losses that the

Corporation could experience over a given time, due to fluctuations in energy prices in each market. The Corporation's policy is to actively manage and limit the group's aggregate VAR exposure within board approved limits.

Competitive Environment

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta is the largest generator of electricity in Alberta, measured by capacity, and has a significant portfolio of generation assets in the Pacific northwest and western U.S. The Corporation also owns and operates generating assets in Eastern Canada, Mexico and Australia.

The Corporation expects that the demand for electricity will grow in its core markets of western Canada and U.S. and reserve margins will continue to tighten. In addition to increased demand, many of the markets in which TransAlta participates have established renewable portfolio targets or standards that require new renewable power investments.

As part of its balanced approach to capital allocation which includes returning capital to shareholders through dividends and share buybacks, TransAlta also has plans for investing in new capacity in its core markets where opportunities exist for renewable and co-generation assets.

Alberta is Canada's fourth largest province by population with approximately 3.5 million residents representing approximately 11 per cent of Canada's total population. Alberta consumed approximately 69,660 GWh of electricity in 2007. As at December 31, 2007, the aggregate installed capacity of generating facilities in Alberta was approximately 12,000 MW.

Electrical utilities in the U.S. Pacific northwest are organized into the Western Electricity Coordinating Council (WECC). The WECC is the largest geographically of the 10 regions in the North American Electric Reliability Council and is divided into four sub-regions, of which Region 1 includes British Columbia, Alberta, Washington, Oregon, Idaho, Montana, Utah, western Wyoming and northern Nevada. This sub-region is referred to as the Northwest Power Pool (NWPP). The WECC estimates that approximately 370,000 GWh of electricity was consumed in the NWPP in 2007. The WECC also reported an estimated aggregate electrical generating capacity of approximately 80,000 MW in the NWPP for the year ending 2007.

Ontario is Canada's largest province with approximately 13 million residents representing approximately 39 per cent of Canada's total population. Ontario consumed approximately 152,000 GWh of electricity in 2007. Ontario Power Generation Inc., the successor to the generation business of Ontario's former integrated electric utility, controls over two-thirds of Ontario's approximately 31,000 MW of installed capacity, the balance of which is owned by municipal electric utilities and private independent power producers or industrial consumers.

In October 2004, the provincial government of New Brunswick officially opened the electricity market to partial competition and corporate reorganization. The Electricity Act (2004) allows wholesale and industrial consumer to either purchase power from either New Brunswick Power or a competing supplier. The new competitive market does not extend to retail customers, businesses or small industries. In 2007, New Brunswick announced the Charter for Change requiring 10% of electricity purchases to be from renewable sources commencing in 2016.

The Corporation expects that the demand for electricity will continue to grow in its target markets. In addition to increased demand, the market for electricity in some of these regions has undergone deregulation. Legislation in Alberta and Ontario and many states in the United States has mandated the unbundling of generation, transmission and distribution services which were traditionally provided by vertically integrated utilities to promote competition in the market for generation, which caused some integrated utilities to sell all or parts of their generation assets. While the pace of this process has changed, the Corporation believes that the combination of increased demand for electricity, deregulation and the increased availability of generation assets may provide it with an opportunity to increase its generation capacity and leverage its Commercial Operations Development capabilities, provided that in doing so, the financial position of the Corporation is not compromised.

Australia is heavily dependent on coal for electricity, more so than any other developed country except Denmark and Greece. About 80% of power produced is derived from coal. Natural gas is increasingly used for electricity, especially in South Australia and Western Australia. The Australian Bureau of Agriculture and Resource Economics (ABARE)

estimated total production of 256,000 GWh for 2007 with a growth rate of approximately 2.5% per annum from 2006 to 2012. The major reform in the Australian electricity industry involved the establishment in southern and eastern Australia of the National Electricity Market (NEM) and in Western Australia, where TransAlta's power assets are located, a new Wholesale Electricity Market (WEM) was introduced in late 2006. Total installed capacity in the WEM is about 4,300 MWs, while TransAlta's capacity in the region is approximately 350 MWs. TransAlta enjoys a solid competitive advantage in power supply to mining operations, especially remote mining operations, and has built up significant knowledge and expertise in this field.

Competitive Strengths

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation believes it is well positioned to achieve its business strategy due to its competitive strengths, which include the following:

Financial strength - The Corporation has investment grade ratings from Moody's Investor Services, Inc. (Moody's), Standard & Poor's, a division of the McGraw-Hill Companies, Inc. (S&P) and Dominion Bond Rating Service Limited (DBRS).

Stable cash flow base - Approximately 70 per cent of the Corporation's generating capacity is contracted through PPAs or LTC's. Revenues received under contractual arrangements are not subject to short-term fluctuations in the spot price for electricity.

Fuel diversity - The Corporation has a diverse mix of fuels used for the generation of electricity, including coal, natural gas, hydro, geothermal and wind. The Corporation believes that this mix reduces the impact on corporate performance in the event of external events affecting one fuel source.

Management team - The Corporation's management team has substantial industry, international and local market experience.

Commercial Operations Development expertise - The Corporation believes that its Commercial Operations Development group has enhanced returns from the Corporation's existing generation base and has allowed the Corporation to obtain more favourable pricing for uncommitted electricity, secure fuel supply on a cost-effective basis and fulfill electricity delivery obligations in the event of an outage.

Ownership or control of coal supply - The Corporation owns, controls or leases extensive coal reserves in Alberta that provide a long-term and stable source of fuel for all of its thermal generation capacity in Alberta. The Corporation's mines in Alberta contain some of the lowest sulphur coal in North America, averaging 0.25 per cent sulphur at the Whitewood mine and 0.25 per cent at the Highvale mine. Coal with lower sulphur content emits less sulphur dioxide when it is burned.

Wind Generation - The Corporation is one of the largest owners and operators of wind generation in Canada. The Wind management team has developed key relationships with customers, suppliers and policy makers that provide a competitive advantage in the development, operations and marketing of wind generation.

Environment - The Corporation is a recognized leader in Sustainable Development and has taken early preventative action on a number of environmental fronts in advance of regulation.

Capital Expenditures

Edgar Filing: TRANSALTA CORP - Form 40-F

Capital expenditures for property and investments (including acquisitions) by TransAlta for the past five years were:

2007	\$599.7 million	2004	\$345.7 million
2006	\$224.9 million	2003	\$757.8 million
2005	\$325.5 million		

ENVIRONMENTAL RISK MANAGEMENT

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta is subject to federal, provincial, state and local environmental laws, regulations and guidelines concerning the generation and transmission of electrical and thermal energy and surface mining. TransAlta is committed to complying with legislative and regulatory requirements and to minimizing the environmental impact of its operations. TransAlta works with governments and the public to develop appropriate frameworks to protect the environment and to promote sustainable development.

TransAlta's approach to managing its environmental, health and safety (EHS) risks has three elements:

- Compliance-based activities, such as permitting and reporting;
- ISO-based EHS Management systems and programs, such as safety programs and auditing; and
- Longer-term strategic initiatives, including climate change and government policy development.

These elements are integrated into TransAlta's corporate-wide operations and management systems. They are designed to mitigate risks of TransAlta's activities to employees, the public and the environment, and to address potential competitive risks from future changes in environmental policy. They are also supportive of TransAlta's corporate commitment to sustainability.

To meet regulatory requirements and improve environmental performance, TransAlta made environmental operating and capital expenditures in fiscal year 2007 of approximately \$46 million. Environmental expenditures are generally defined as expenditures incurred to comply with Canadian or international environmental regulations, conventions or voluntary agreements.

All TransAlta's facilities are in material compliance with existing regulatory requirements. Environmental risk at the plants operated by TransAlta has been reduced by actions in several areas:

- Continued investment in mercury control technology evaluation leading to installation of mercury capture equipment at our Alberta coal plants in 2010;
- Uprate improvements delivering higher efficiency generation at the Sundance plant;
- Continued program of compliance and management system audits at all facilities;
- The planned decommissioning of the older Wabamun thermal plant in 2010;
- Growth of a carbon offset portfolio;
- Continued expansion of the wind energy business, with minimal emissions footprint; and
- Investigation of carbon capture and storage technology.

On a longer time horizon, TransAlta anticipates future environmental regulatory developments in areas such as climate change, air quality and water. Regulatory changes and policy developments are tracked in all relevant jurisdictions.

Edgar Filing: TRANSALTA CORP - Form 40-F

Effective July 1, 2007, the *Climate Change and Emissions Management Amendment Act* was enacted into law in Alberta. Under the legislation, baselines and targets for greenhouse gas (GHG) intensity are set on a facility by facility basis. The legislation requires a 12 per cent reduction in greenhouse gas emission intensity from a baseline of the average of 2003 to 2005 emission levels. TransAlta's climate change strategy addresses the potential competitive risks to its fossil generation plants. The strategy includes increased use of less carbon-intensive fuels such as natural gas and renewable resources, continued investment in emission offsets and internal efficiency improvements and development of clean combustion technology. TransAlta continues to be an active participant with governments in the development of climate change policy in the international, national and provincial arenas.

On April 26, 2007, the Canadian government released details of its proposed environmental legislation. The federal plan calls for an 18 per cent reduction in GHG emission intensity starting in 2010, increasing to a 20 per cent absolute reduction requirement by 2020. The proposed legislation also calls for a reduction in air pollutants such as sulphur dioxide, nitrous oxide, mercury, and particulates starting in the 2012 - 2015 period. Proposed reduction caps range from 45 per cent to 60 per cent of current levels. A number of material details in the federal plan are still to be determined, including its interaction with provincial programs, which will allow a reasonable determination of future compliance costs.

On January 24, 2008, Alberta released the long-term component part of its climate change plan for the province. The plan provided long-term targets for emissions reductions. At this time there is no indication that the reduction requirements for industry will change significantly beyond the regulatory framework already in place.

In the United States, the Washington State Climate Bill 6001 was enacted and came into effect July 22, 2007. TransAlta's operations will not be impacted by the bill's performance standards at the current time, provided the facilities do not change ownership or enter into power sales contracts longer than five years. Additionally, further emissions requirements are being considered for the Centralia plant for mercury and nitrous oxide, however final determinations are several months away. Federally, the U.S. Government continues to contemplate a number of proposed greenhouse gas bills but to date no clear outcome or schedule is evident.

Mercury reduction requirements in Alberta are established at a 70 per cent reduction by 2010. TransAlta submitted its mercury control plan in March of 2007. Requirements for capital control equipment are clear in Alberta, and work is on schedule to select and install the necessary control technology. Mercury control requirements in the United States are on a similar schedule, although Washington State's specific rules for TransAlta's Centralia plant are not yet finalized.

TransAlta is an active participant in the Canadian Clean Power Coalition, which is committed to developing clean coal technology in Canada. The coalition has several engineering initiatives underway which will provide important guidance on ultimate clean coal solutions for TransAlta's facilities. The Corporation is also exploring the possibilities for a CO₂ network pipeline through the ICON industry consortium.

Environmental issues concerning water use are managed within the ISO 14001 framework. TransAlta continues to work with regulators in each jurisdiction in which it operates, to ensure water is used wisely on site and that all regulations pertaining to water and wetlands management, both on and off site, are met at all times.

TransAlta's environmental efforts have been recognized by the Dow Jones Sustainability Index for eight years in a row. The Index represents the best environmental performance leaders worldwide. TransAlta was also named a climate disclosure leader in 2007 by virtue of its contribution to the global Carbon Disclosure Project.

To date, TransAlta does not believe that its competitive position in the wholesale generation business has been adversely affected by environmental concerns. We continue to make operational improvements and investments to its existing generating facilities to reduce the environmental impact of generating electricity.

RISK FACTORS

Regulatory and political risks exist in all jurisdictions in which TransAlta operates. TransAlta seeks to manage these risks by working with regulators and other stakeholders to resolve issues as fairly and expeditiously as possible. For a discussion of risk factors affecting TransAlta, please refer to "Risk Factors and Risk Management", in TransAlta's MD&A for the year ended December 31, 2007, which is incorporated by reference herein.

EMPLOYEES

Edgar Filing: TRANSALTA CORP - Form 40-F

As of December 31, 2007, the Corporation had 2,204 full and part-time employees, of which 1,559 were employed in TransAlta's generation business and 136 were employed in TransAlta's energy marketing business. Approximately 1,029 of the Corporation's employees are represented by labour unions. The Corporation is currently a party to 13 different collective bargaining agreements. On November 5, 2007, 126 unionized workers at the Poplar Creek facility went on a legal strike. The union and the Corporation reached agreement on December 5, 2007 and the workers returned to work on December 12, 2007. Overall in 2007, the Corporation renewed 8 of the agreements and an additional 2 collective agreements will be re-negotiated in 2008. The risk profile for each of these negotiations is low.

CAPITAL STRUCTURE

General

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation's authorized share capital consists of an unlimited number of common shares and an unlimited number of first preferred shares, issuable in series. As at March 13, 2008, there were 201,118,565 common shares outstanding and no first preferred shares were outstanding.

Common Shares

Edgar Filing: TRANSALTA CORP - Form 40-F

Each common share of the Corporation entitles the holder thereof to one vote for each common share held at all meetings of shareholders of the Corporation, except meetings at which only holders of another specified class or series of shares are entitled to vote, to receive dividends if, as and when declared by the Board of Directors, subject to prior satisfaction of preferential dividends applicable to any first preferred shares, and to participate rateably in any distribution of the assets of the Corporation upon a liquidation, dissolution or winding up and subject to prior rights and privileges attaching to first preferred shares. The common shares are not convertible and are not entitled to any pre-emptive rights. The common shares are not entitled to cumulative voting.

First Preferred Shares

Edgar Filing: TRANSALTA CORP - Form 40-F

The Corporation is authorized to issue an unlimited number of first preferred shares, issuable in series and, with respect to each series, the Board of Directors is authorized to fix the number of shares comprising the series and determine the designation, rights, privileges, restrictions and conditions attaching to such shares, subject to certain limitations.

The first preferred shares of all series rank senior to all other shares of the Corporation with respect to priority in payment of dividends and with respect to distribution of assets in the event of liquidation, dissolution or winding up of the Corporation, or a reduction of stated capital. Holders of first preferred shares are entitled to receive cumulative quarterly dividends on the subscription price thereof as and when declared by the Board of Directors at the rate established by the Board of Directors at the time of issue of shares of a series. No dividends may be declared or paid on any other shares of the Corporation unless all cumulative dividends accrued upon all outstanding first preferred shares have been paid or declared and set apart. In the event of the liquidation, dissolution or winding up of the Corporation, or a reduction of stated capital, no sum shall be paid or assets distributed to holders of other shares of the Corporation until the holders of first preferred shares shall have been paid the subscription price of the shares, plus a sum equal to the premium payable on a redemption, plus a sum equal to the arrears of dividends accumulated on the first preferred shares to the date of such liquidation, dissolution, winding up, or reduction of stated capital, as applicable. After payment of such amount, the holders of first preferred shares shall not be entitled to share further in the distribution of the assets of the Corporation.

The Corporation's Board of Directors may include, in the share conditions attaching to a particular series of first preferred shares, certain voting rights effective upon the Corporation failing to make payment of six quarterly dividend payments, whether or not consecutive. These voting rights continue for so long as any dividends remain in arrears. These voting rights are the right to one vote for each \$25 of subscription price on all matters in respect of which shareholders vote, and additionally, the right of all series of first preferred shares, voting as a combined class, to elect two directors of the Corporation if the Board of Directors then consists of less than 16 directors, or three directors if the Board of Directors consists of 16 or more directors. Otherwise, except as required by law, the holders of first preferred shares shall not be entitled to vote or to receive notice of or attend any meeting of the shareholders of the Corporation.

Subject to the share conditions attaching to any particular series providing to the contrary, the Corporation may redeem first preferred shares of a series, in whole or from time to time in part, at the redemption price applicable to each series and the Corporation has the right to acquire any of the first preferred shares of one or more series by purchase for cancellation in the open market or by invitation for tenders at a price not to exceed the redemption price applicable to the series.

CREDIT RATINGS

Issuer Rating

Edgar Filing: TRANSALTA CORP - Form 40-F

As of December 31, 2007, the Corporation's issuer rating from S&P was BBB (stable) and from Moody's was Baa2 (stable).

Commercial Paper

Edgar Filing: TRANSALTA CORP - Form 40-F

As of December 31, 2007, the Corporation's guaranteed commercial paper was rated R-1(low) (stable) by DBRS. The Corporation's non-guaranteed commercial paper was rated R-2(high) (stable) by DBRS.

Senior Unsecured Long-Term Debt

Edgar Filing: TRANSALTA CORP - Form 40-F

As of December 31, 2007, the Corporation's senior unsecured long-term debt is rated BBB (stable) by DBRS, BBB (stable) by S&P and Baa2 (stable) by Moody's. The ratings for debt instruments range from a high of AAA to a low of D in the case of both DBRS and S&P and from a high of Aaa to a low of C in the case of Moody's.

According to the DBRS rating system, debt securities rated BBB are of adequate credit quality. Protection of interest and principal is considered acceptable, but the entity is more susceptible to adverse changes in financial and economic conditions, or there may be other adverse conditions present which reduce the strength of the entity and its rated securities. High or Low grades indicate the relative standing within a rating category. DBRS also assigns rating trends to each of its ratings to give investors an understanding of DBRS' opinion regarding the outlook for the rating in question.

According to the S&P rating system, debt securities rated BBB exhibit adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on such obligations than on obligations in the higher rating categories. The ratings from AA to B may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

According to the Moody's rating system, debt securities rated Baa are subject to moderate credit risk. They are considered medium-grade and as such may possess certain speculative characteristics. Numerical modifiers 1, 2 and 3 are applied to each rating category, with 1 indicating that the obligation ranks in the higher end of the category, 2 indicating a mid-range ranking and 3 indicating a ranking in the lower end of the category.

Note Regarding Credit Ratings

Edgar Filing: TRANSALTA CORP - Form 40-F

Credit ratings are intended to provide investors with an independent measure of credit quality of an issue of securities. The credit ratings accorded to the Corporation's outstanding securities by S&P, Moody's and DBRS, as applicable, are not recommendations to purchase, hold or sell such securities inasmuch as such ratings do not comment as to market price or suitability for a particular investor. There is no assurance that the ratings will remain in effect for any given period or that a rating will not be revised or withdrawn entirely by S&P, Moody's or DBRS in the future if, in its judgement, circumstances so warrant.

DIVIDENDS

Edgar Filing: TRANSALTA CORP - Form 40-F

In setting its dividend, TransAlta's Board of Directors considers the Corporation's financial performance and balances liquidity requirements, capital reinvestment and returning capital to shareholders. The payment and level of future dividends on the common shares are determined by the Board of Directors of TransAlta upon consideration of such factors. TransAlta has declared and paid the following dividends per share on its outstanding common shares for the past three years:

Period		Dividend per Common Share
2005	First Quarter	\$0.25
	Second Quarter	\$0.25
	Third Quarter	\$0.25
	Fourth Quarter	\$0.25
2006	First Quarter	\$0.25
	Second Quarter	\$0.25
	Third Quarter	\$0.25
	Fourth Quarter	\$0.25
2007	First Quarter	\$0.25
	Second Quarter	\$0.25
	Third Quarter	\$0.25
	Fourth Quarter	\$0.25

On January 1, 2008, TransAlta paid cash dividends of \$0.25 per common share. On January 31, 2008, the Corporation's Board of Directors declared a cash dividend of \$0.27 per common share, payable on April 1, 2008 to shareholders of record on March 1, 2008.

MARKET FOR SECURITIES

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta's common shares are listed on the Toronto Stock Exchange (TSX) under the symbol TA and the New York Stock Exchange under the symbol TAC . TransAlta's preferred securities were listed on the Toronto Stock Exchange under the symbol TA.PR.C until January 2, 2007 at which time they were redeemed (see General Development of the Business). The following table sets forth the reported high and low trading prices and trading volumes of the Corporation's common shares as reported by the TSX for the periods indicated:

Month	Price (\$) High	Low	Volume
<u>2007</u>			
January	27.25	24.38	14,675,110
February	25.71	24.01	20,305,992
March	25.37	23.59	13,911,140
April	28.23	24.76	18,912,768
May	28.62	26.00	18,495,876
June	28.45	26.07	20,985,557
July	32.36	26.80	23,767,597
August	30.31	27.06	19,190,389
September	31.53	29.16	11,674,133
October	34.00	29.85	22,731,155
November	34.50	31.27	16,342,705
December	34.43	31.20	11,258,481
<u>2008</u>			
January	34.00	29.85	15,201,560
February	35.80	32.01	27,280,079
March 1 to 7	35.73	34.00	4,405,703

DIRECTORS AND OFFICERS

Edgar Filing: TRANSALTA CORP - Form 40-F

The name, province or state and country of residence of each of the directors and officers of TransAlta as at March 13, 2008, their respective position and office and their respective principal occupation during the five preceding years, are set out below. The year in which each director was appointed to serve to the Board is also set out below. Each director is appointed to serve until the next annual meeting of TransAlta or until his or her successor is elected or appointed.

Edgar Filing: TRANSALTA CORP - Form 40-F

Name, Province (State) and Country of Residence	Year first became Director	Principal Occupation
<p>William D. Anderson Ontario, Canada</p>	<p>2003</p>	<p>Corporate Director. Mr. Anderson was President of BCE Ventures (a subsidiary of BCE Inc.) from 2001 to 2005 (telecommunications) and prior to that, CFO of BCE Inc., Bell Canada Inc. and Bell Cablemedia plc (telecommunications). As President of BCE Ventures, he was responsible for a number of significant operating companies as well as being CEO of Bell Canada International Inc. In his CFO roles, Mr. Anderson was responsible for all financial operations of the respective companies and he executed numerous debt and equity financings, corporate acquisition and disposition transactions as well as corporate and operational restructurings.</p> <p>Mr. Anderson is a director of Gildan Activewear Inc. and of MDS Inc. He is a past director at BCE Emergis Inc., Bell Cablemedia plc, Bell Canada International Inc., CGI Group Inc., Four Seasons Hotels Inc., Sears Canada Inc., and Videotron Holdings plc.</p> <p>At TransAlta, Mr. Anderson is Chair of the Audit and Risk Committee of the Board.</p> <p>Mr. Anderson holds a bachelor degree in business administration from the University of Western Ontario (London, ON) and is a Chartered Accountant.</p>
<p>Stanley J. Bright (1) Maryland, U.S.A.</p>	<p>1999</p>	<p>Corporate Director. Mr. Bright was President, CEO and Chairman of MidAmerican Energy Company from 1997 to 1999 (electric and gas utility). He was also President, CEO and Chairman, and CEO of predecessor companies, including the Iowa-Illinois Gas & Electric Company (IIG&E), from 1991 to 1997. As the CEO of IIG&E, Mr. Bright led the consolidation of a number of Midwest utilities in anticipation of emerging market competition, giving rise to the creation of MidAmerican Energy. As the President, CEO and Chairman of the new entity, Mr. Bright led the realization of significant synergies while working through the post-merger transition. The Company also structured a long-term rate plan with the Iowa Public Service Commission. He retired as CEO of MidAmerican in 1999 but continued as a director until 2006.</p> <p>At TransAlta, Mr. Bright is Chair of the Human Resources Committee of the Board.</p> <p>Mr. Bright holds a bachelor degree in accounting from The George Washington University (Washington, DC) and is a Certified Public Accountant.</p>
<p>Timothy W. Faithfull England, U.K.</p>	<p>2003</p>	<p>Corporate Director. Mr. Faithfull is a 36-year veteran of Royal Dutch/Shell plc (energy), where he filled diverse roles that spanned the globe. As President and CEO of Shell Canada Limited, he was responsible for bringing the \$6 billion Athabasca Oil Sands Project on line, the first fully integrated oil sands venture in 25 years. Mr. Faithfull has extensive experience with commodity exposure and risk management, the result of his time directing the global crude oil trading operation for the Shell International Trading and Shipping Company from 1993 to 1996.</p> <p>Mr. Faithfull is a director of Canadian Pacific Railway Limited, the Shell Pension Trust Limited, and AMEC plc.</p> <p>At TransAlta, Mr. Faithfull is a member of the Audit and Risk Committee and the Human Resources Committee of the Board.</p>

Mr. Faithfull holds a bachelor of arts degree in economics from the University of Oxford (Oxford, UK).

Edgar Filing: TRANSALTA CORP - Form 40-F

Name, Province (State) and Country of Residence	Year first became Director	Principal Occupation
Ambassador Gordon D. Giffin Georgia, U.S.A	2002	<p><i>Lawyer and Senior Partner, McKenna, Long & Aldridge LLP (attorneys).</i> From 1997 to 2001, Mr. Giffin served as the United States Ambassador to Canada with responsibility for managing Canada/US bilateral relations, including energy and environmental policy. Prior to this appointment, he practiced law for 18 years as a senior partner in Atlanta, Georgia and Washington D.C. His practice focused on energy regulatory work at the state and federal levels. Prior to that, he served as Chief Counsel and Legislative Director to United States Senator Sam Nunn, with responsibility for the legal and legislative operations of the office. In 2001, Mr. Giffin returned to private practice where he specializes in state and federal regulatory matters, including those related to trade, energy and trans-border commerce.</p> <p>Mr. Giffin is a director of AbitibiBowater, Canadian Imperial Bank of Commerce, Canadian National Railway Company, Canadian Natural Resources Limited, and Ontario Energy Savings Ltd.</p> <p>At TransAlta, Mr. Giffin is Chair of the Governance and Environment Committee of the Board.</p> <p>Mr. Giffin holds a bachelor of arts from Duke University (Durham, NC) and a juris doctorate from Emory University School of Law (Atlanta, GA).</p>
C. Kent Jespersen Alberta, Canada	2004	<p><i>Corporate Director.</i> Mr. Jespersen has been Chair and CEO of La Jolla Resources International Ltd. since 1998 (advisory and investments). He has also held senior executive positions with NOVA Corporation of Alberta, Foothills Pipe Lines Ltd., and Husky Oil Limited before assuming the presidency of Foothills Pipe Lines Ltd. and later, NOVA Gas International Ltd. At NOVA, he led the non-regulated energy services business (including energy trading and marketing) and all international activities.</p> <p>Mr. Jespersen is Chairman and a director of Orvana Minerals Ltd. and CCR Technologies Ltd. and a director of Matrikon Inc. and of Axia NetMedia Corporation.</p> <p>At TransAlta, Mr. Jespersen is a member of the Governance and Environment Committee and the Human Resources Committee of the Board.</p> <p>Mr. Jespersen holds a bachelor of science in education and a master of science in education from the University of Oregon (Eugene, OR).</p>
Michael M. Kanovsky British Columbia, Canada	2004	<p><i>Corporate Director and Independent Businessman.</i> Mr. Kanovsky co-founded Northstar Energy Corporation (oil and gas) with initial capital of \$400,000 and helped build this entity into an oil and gas producer that was sold to Devon Energy Corporation for approximately \$600 million in 1998. During this period, Mr. Kanovsky was responsible for strategy, finance as well as merger and acquisition activity. He initiated Northstar's entry into electrical cogeneration through its wholly owned power subsidiary, Powerlink Corporation (electricity generation). Powerlink developed one of the first independent power producer (IPP) gas-fired co-generation plants in Ontario and also internationally. In 1997, he founded Bonavista Energy which has grown to a present day market cap of approximately \$6 billion.</p>

Edgar Filing: TRANSALTA CORP - Form 40-F

Mr. Kanovsky is a director of Accrete Energy Corporation, ARC Energy Trust, Bonavista Energy Trust, Devon Energy Corporation, and Pure Technologies Inc..

At TransAlta, he is a member of the Audit and Risk Committee and the Governance and Environment Committee of the Board.

Mr. Kanovsky, a professional engineer, holds a bachelor of science in mechanical engineering from Queen's University (Kingston, ON) as well as a master of business administration from the Richard Ivey School of Business at the University of Western Ontario (London, ON).

Edgar Filing: TRANSALTA CORP - Form 40-F

Name, Province (State) and Country of Residence	Year first became Director	Principal Occupation
<p>Donna Soble Kaufman Ontario, Canada</p>	<p>1989</p>	<p>Lawyer and Corporate Director. Mrs. Kaufman is a former partner with Stikeman Elliott, an international law firm where she practised antitrust law. She has served on a number of boards since 1987 when she became a director of Selkirk Communications Limited, a diversified communications company. A year later she was appointed Chair of the Board and President and CEO. Several other directorships followed. In addition to TransAlta, Mrs. Kaufman currently serves on the boards of BCE Inc. and Bell Canada. She is also a director of HISTORICA, a private-sector education initiative, and a member of the Canadian Advisory Board of Catalyst, a non-profit organization working to advance women in business.</p> <p>At TransAlta, Mrs. Kaufman is Chair of the Board of the Corporation and an ex-officio member of all committees of the Board.</p> <p>Mrs. Kaufman holds a bachelor of civil law degree from McGill University (Montréal, QC) and a master of laws degree from the Université de Montréal.</p>
<p>Gordon S. Lackenbauer (1) Alberta, Canada</p>	<p>2005</p>	<p>Corporate Director. Mr. Lackenbauer was Deputy Chairman of BMO Nesbitt Burns Inc. from 1990 to 2004 (investment banking). Prior to this, he was responsible for the principal activities of the firm, which included fixed income sales and trading, equity and debt, new issue underwriting and syndication. Mr. Lackenbauer has worked with many of Canada's leading utilities and has frequently acted as an expert financial witness testifying on the cost of capital, capital structure, and the fair rate of return before the Alberta Utilities Commission, the National Energy Board, and the Ontario Energy Board. His clients included Alberta Power (now ATCO Electric), Consumers Gas, IPL (now Enbridge), and TransCanada PipeLines, among others.</p> <p>Mr. Lackenbauer is a director of NAL Oil & Gas Trust, CTV Globemedia Inc., and is a Governor of Mount Royal College. He was a director of Tembec Inc. until August 2007.</p> <p>At TransAlta, he is a member of the Governance and Environment Committee and the Audit and Risk Committee of the Board.</p> <p>Mr. Lackenbauer holds a bachelor of arts in economics from Loyola College (Montreal, QC), as well as a master of business administration from the University of Western Ontario (London, ON). He is also a chartered financial analyst.</p>
<p>Martha C. Piper British Columbia, Canada</p>	<p>2006</p>	<p>Corporate Director. Dr. Piper was President and Vice-Chancellor of the University of British Columbia from 1997 to 2006 (education). Prior to her appointment at UBC, she served as Vice-President, Research at the University of Alberta. She served on the Boards of the Alberta Research Council, the Conference Board of Canada, and the Centre for Frontier Engineering Research. Dr. Piper was also appointed by the Prime Minister of Canada to the Advisory Council on Science and Technology, and she served as a member of the Canada Foundation for Innovation.</p> <p>Dr. Piper is a director of the Bank of Montreal and Shoppers Drug Mart Corporation, and is a member of the Canadian delegation to the Trilateral Commission, an organization fostering closer cooperation among the core democratic industrialized areas of the world.</p>

Edgar Filing: TRANSALTA CORP - Form 40-F

At TransAlta, Dr. Piper is a member of the Human Resources Committee and the Governance and Environment Committee of the Board.

Dr. Piper holds a bachelor of science in physical therapy from the University of Michigan (Ann Arbor, MI), a master of arts in child development from the University of Connecticut (Storrs, CT), a doctorate of philosophy in epidemiology and biostatistics from McGill University (Montréal, QC). She has received honorary degrees from 15 international universities. She is an Officer of the Order of Canada and a recipient of the Order of British Columbia.

Edgar Filing: TRANSALTA CORP - Form 40-F

Name, Province (State) and Country of Residence	Year first became Director	Principal Occupation
Luis Vázquez Senties Mexico	2001	<i>Corporate Director and Independent Businessman.</i> Mr. Vázquez is founder, President, CEO and Chairman of Grupo Diavaz, an international constructor of offshore oil and gas platforms, developer of oil and gas fields, and a distributor of natural gas in Mexico (oil and gas). Grupo Diavaz began as a Mexican underwater diving operation that grew to become the world's second largest firm of its kind, servicing the offshore oil and gas industry in both exploration and production efforts.

Mr. Vázquez is Chairman of the Mexican Gas Association and Vice-President of the Mexico Chapter of the World Energy Council. He is a past director of the American Gas Association.

At TransAlta, Mr. Vázquez is a member of the Human Resources Committee of the Board.

Stephen G. Snyder Alberta, Canada	1996	<i>President and Chief Executive Officer of TransAlta Corporation since 1996.</i> Mr. Snyder guided TransAlta through its evolution from an Alberta-focused, regulated utility to an international power generator. Prior to joining TransAlta, Mr. Snyder held several CEO posts, namely with Camco Inc. (now a part of General Electric), GE Canada Inc., and Noma Industries Limited. While at GE, Mr. Snyder led the transformation of GE's Canadian-based businesses into global competitors. At Noma, he built a deeply-rooted Canadian consumer products manufacturer into a North American industrial products company.
--------------------------------------	------	---

Mr. Snyder is a director of the Canadian Imperial Bank of Commerce, Chair of the Calgary Stampede Foundation, and a director of the Calgary Stampede. He is the past-chair of the Calgary Committee to End Homelessness, the Canada-Alberta ecoEnergy Carbon Capture & Storage Task Force, and of the Conference Board of Canada.

Mr. Snyder holds a bachelor of science in chemical engineering from Queen's University (Kingston, ON) as well as a master of business administration from the University of Western Ontario (London, ON).

Note:

(1) Mr. Bright served as a director of Access Air Inc. for the period of December 4, 1997 to January 31, 2000, a privately held start-up airline company. The company Mr. Bright was employed by, and whom he represented, supported this airline in the hope that it would improve air service to the state of Iowa. Access Air Inc. filed for bankruptcy protection on November 29, 1999. Mr. Lackenbauer resigned from the Board of Directors of Tembec Inc. on August 2, 2007. On December 19, 2007, Tembec announced its proposed recapitalization transaction providing a consensual solution to both noteholders and shareholders. If Tembec is successful in its recapitalization efforts, including obtaining the approval of noteholders of a Plan of Arrangement under the *Canada Business Corporations Act*, the matter is subject to the final approval of the Court.

Officers

Edgar Filing: TRANSALTA CORP - Form 40-F

Name	Principal Occupation	Residence
Stephen G. Snyder	President and Chief Executive Officer	Calgary, Alberta
Brian Burden	Executive Vice-President and Chief Financial Officer	Calgary, Alberta
William D.A. Bridge	Executive Vice-President, Generation Technology and PMM	Calgary, Alberta
Dawn L. Farrell	Executive Vice-President, Corporate Development and Marketing	Calgary, Alberta

- Prior to October 2005, Richard Langhammer was President, TransAlta Centralia Generation LLC and TransAlta Centralia Mining LLC, subsidiaries of the Corporation; and prior to December 2003, he was Vice-President, Plant Operations of TransAlta.
- Prior to April, 2007, Kenneth Stickland was Executive Vice-President, Legal.
- Prior to July 2007, Michael Williams was Executive Vice-President, HR & Communications.
- Prior to October 2006, Jeff Curran was Interim Vice-President and Comptroller; prior to May 2006, he was Director, Financial Operations - Generation Technology; prior to June 2004, he was Manager, Investment Analysis; prior to March 2003, he was Manager - Financial Reporting & Planning; and prior to March 2001, he was a Senior Audit Manager with Arthur Andersen LLP.
- Prior to June 2007, Frank Hawkins was Assistant Treasurer.
- Prior to June 2005, Maryse St.-Laurent was Secretary of TC PipeLines, LP since September 2003 and Recording Secretary since January 2001; and Senior Legal Counsel TransCanada Corporation since June 1997.

As of March 13, 2008, the directors and executive officers of TransAlta, as a group, beneficially owned, directly or indirectly, or exercised control or direction over an aggregate of 495,488 common shares of TransAlta. This constitutes less than one percent of TransAlta's outstanding common shares.

INTERESTS OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Edgar Filing: TRANSALTA CORP - Form 40-F

No director or executive officer of the Corporation, no person or company that is the direct or indirect beneficial owner of, or who exercises control or direction over more than 10 per cent of the common shares of the Corporation, and no associate or affiliate of any of them, has or has had any material interest, direct or indirect, in any transaction involving the Corporation since the commencement of the Corporation's last financial year or in any proposed transactions that has materially affected or will materially affect the Corporation.

INDEBTEDNESS OF DIRECTORS, EXECUTIVE OFFICERS AND SENIOR OFFICERS

Edgar Filing: TRANSALTA CORP - Form 40-F

Since January 1, 2007, there has been no indebtedness, other than routine indebtedness, outstanding to TransAlta from any of TransAlta's directors, nominees for election as directors, executive officers, senior officers or associates of any such directors, nominees or officers.

LEGAL PROCEEDINGS AND REGULATORY ACTIONS

Edgar Filing: TRANSALTA CORP - Form 40-F

TransAlta is occasionally named as a party in various claims and legal proceedings which arise during the normal course of its business. TransAlta reviews each of these claims, including the nature of the claim, the amount in dispute or claimed and the availability of insurance coverage. Although there can be no assurance that any particular claim will be resolved in

the Corporation's favour, the Corporation does not believe that the outcome of any claims or potential claims of which it is currently aware will have a material adverse effect on the Corporation, taken as a whole, after taking into account amounts reserved by the Corporation. For further information, please refer to Notes 28 and 30 of the Corporation's audited consolidated financial statements for the year ended December 31, 2007, which note is hereby incorporated by reference herein.

TRANSFER AGENT AND REGISTRAR

Edgar Filing: TRANSALTA CORP - Form 40-F

The transfer agent and registrar for TransAlta's common shares is CIBC Mellon Trust Company in Vancouver, Calgary, Winnipeg, Toronto and Montreal. The transfer agent and registrar for the common shares in the United States is Mellon Investor Services LLC at its principal office in New York, New York.

INTERESTS OF EXPERTS

Edgar Filing: TRANSALTA CORP - Form 40-F

Ernst & Young LLP, Chartered Accountants, 1000, 440 - 2nd Avenue, SW., Calgary, Alberta, T2P 5E9 are the auditors of the Corporation.

TransAlta's auditors, Ernst & Young LLP, are independent in accordance with the Rules of Professional Conduct of the Institute of Chartered Accountants of Alberta and have complied with the SEC's rules on auditor independence.

ADDITIONAL INFORMATION

Edgar Filing: TRANSALTA CORP - Form 40-F

Additional information in relation to TransAlta may be found under TransAlta's profile on SEDAR at www.sedar.com.

Additional information including directors' and officers' remuneration and indebtedness, principal holders of TransAlta's securities and securities authorized for issuance under equity compensation plans (all where applicable), is contained in TransAlta's Proxy Circular for its most recent annual meeting of shareholders that involved the election of directors and can be obtained upon request from the Corporate Secretary of TransAlta Corporation.

Additional financial information is provided in TransAlta's audited consolidated financial statements and MD&A for its most recently completed financial year.

AUDIT AND RISK COMMITTEE

General

Edgar Filing: TRANSALTA CORP - Form 40-F

The members of TransAlta's Audit and Risk Committee (ARC) satisfy the requirements for independence under the provisions of Canadian Securities Regulators, Multilateral Instrument 52-110 Audit Committees, Section 303A of the New York Stock Exchange Rules and Rule 10A-3 under the U.S. Securities and Exchange Act of 1934. The ARC's Charter requires that it be comprised of a minimum of three independent directors. It currently has four independent members, William D. Anderson (Chair), Timothy W. Faithfull, Michael M. Kanovsky and Gordon S. Lackenbauer, and the Chair of the Board, Donna Soble Kaufman (who is independent), attends all meetings as an ex-officio member of the committee. All members of the committee (including the Chair of the Board) are financially literate pursuant to both Canadian and U.S. securities requirements and each of Mr. William D. Anderson and Mr. Gordon S. Lackenbauer have been determined by the Board to be an audit committee financial expert, within the meaning of Section 407 of the United States Sarbanes-Oxley Act of 2002 (Sarbanes-Oxley Act).

Mandate of the Audit and Risk Committee

The mandate of the ARC is to assist the Board in its oversight responsibility to the shareholders of the Corporation, the investment community and others relating to the integrity of the Corporation's financial statements, the quality of its financial reporting processes, the systems of internal accounting and financial controls, the risk identification assessments conducted by management and the programs established to address such risks, the internal audit function, the external auditors' qualifications, independence, performance and reports and to provide oversight with respect to legal compliance programs established by management which may have a material effect on the financial statements of the Corporation. The

ARC also reviews the Corporation's compliance with the Corporation's code of conduct, financial code of conduct and the Corporation's policy with respect to the hiring of employees of the external auditors.

The ARC's function is oversight. Management is responsible for the preparation, presentation and integrity of the financial statements of the Corporation. Management and the internal audit group of the Corporation are responsible for maintaining appropriate accounting and financial reporting principles and policy and internal controls and procedures for compliance with accounting standards and applicable laws and regulations.

While the ARC has the responsibilities and powers set forth herein, it is not the duty of the ARC to plan or conduct audits or to determine that the Corporation's financial statements are complete and accurate and in accordance with generally accepted accounting principles. This is the responsibility of management and the external auditors.

Management is responsible for preparing the interim and annual financial statements and financial disclosure of the Corporation and for maintaining a system of internal controls to provide reasonable assurance that assets are safeguarded and that transactions are authorized, executed, recorded and reported properly. The ARC's role is to provide direct, meaningful and effective oversight of the Corporation's financial reporting and counsel to management without assuming responsibility for management's day-to-day duties.

Audit and Risk Committee Charter

The Charter of the Audit and Risk Committee is attached as Appendix A .

Relevant Education and Experience of Audit and Risk Committee Members

Edgar Filing: TRANSALTA CORP - Form 40-F

The following is a brief summary of the education or experience of each member of the ARC that is relevant to the performance of their responsibilities as a member of the ARC, including any education or experience that has provided the member with an understanding of the accounting principles used by TransAlta to prepare its annual and interim financial statements.

Name of ARC Member	Relevant Education and Experience
W. D. Anderson	Mr. Anderson is a Chartered Accountant. Mr. Anderson has served as Chief Executive Officer of a public company and as Chief Financial Officer of several public companies. In such capacities, Mr. Anderson actively supervised persons engaged in preparing, auditing, analyzing or evaluating financial statements. Mr. Anderson has also served as a principal financial officer, accounting officer and controller and as a director and audit committee member of several public companies.
T. W. Faithfull	Mr. Faithfull holds a Bachelor of Arts degree in Economics and has acquired significant financial experience and exposure to accounting and financial issues as Chief Executive Officer of Shell Canada Limited and in his other capacities during his 36 years with the Royal Dutch/Shell group of companies.
M. M. Kanovsky	Mr. Kanovsky has over 30 years of financial and industry experience gained through working in the investment banking business as well as a director, officer and audit committee member of several public companies and trusts. Mr. Kanovsky is a graduate of the MBA program from the Richard Ivey School of Business at the University of Western Ontario.
G. S. Lackenbauer	Mr. Lackenbauer has over 35 years of experience in the investment banking industry. Mr. Lackenbauer has also appeared as an expert financial witness with respect to financial markets, capital structure, cost of capital and fair return on common equity, in over 40 regulatory proceedings. Mr. Lackenbauer also has extensive experience as a director or governor of public companies and not-for-profit organizations. Mr. Lackenbauer holds a Bachelor of Arts in Economics, a MBA degree from the University of Western Ontario and is a Chartered Financial Analyst.

Other Board Committees

Edgar Filing: TRANSALTA CORP - Form 40-F

In addition to the Audit and Risk Committee, TransAlta has two other standing committees: the Governance and Environment Committee and the Human Resources Committee. Mrs. Kaufman, the Chair of the Board, is a non-voting ex-officio member of all committees. The voting members of these committees as of December 31, 2007 are:

Governance and Environment Committee

Chair: Ambassador Gordon D. Giffin
C. Kent Jespersen
Michael M. Kanovsky
Gordon S. Lackenbauer
Dr. Martha C. Piper

Human Resources Committee

Chair: Stanley J. Bright
Timothy W. Faithfull
C. Kent Jespersen
Dr. Martha C. Piper
Luis Vázquez Senties

The Charters of the Governance and Environment Committee and the Human Resources Committee may be found on TransAlta's website under Corporate Responsibility - Governance at www.transalta.com. Further information about the Board and the Corporation's corporate governance may also be found on our website.

Fees Paid to Ernst & Young LLP

Edgar Filing: TRANSALTA CORP - Form 40-F

For the years ended December 31, 2007 and December 31, 2006, Ernst & Young LLP and its affiliates were paid \$2,838,740 and \$3,596,689 respectively, as detailed below:

Year ended Dec. 31 Ernst & Young LLP		2007		2006
Audit fees	\$	2,623,699	\$	3,286,212
Audit related fees		168,968		300,892
Tax fees		45,743		9,585
Total	\$	2,838,740	\$	3,596,689

No other audit firms provided audit services in 2007 or 2006.

The nature of each category of fees is described below:

Audit Fees

Audit fees were paid for professional services rendered by the auditors for the audit of the Corporation's annual financial statements or services provided in connection with statutory and regulatory filings or engagements, including the translation from English to French of the Corporation's financial statements and other documents. Total audit fees for 2007 include payments related to 2007 (\$1,147,390) and 2006 (\$1,476,309). Total audit fees for 2006 include payments related to 2006 (\$1,193,763) and 2005 (\$2,092,449).

Audit-Related Fees

The audit-related fees in 2007 were primarily for work performed by Ernst & Young LLP in relation to miscellaneous accounting advice provided to the Corporation.

Tax Fees

Majority of tax fees for 2007 relate to the finalization of tax credit recoveries.

Pre-Approval Policies and Procedures

Edgar Filing: TRANSALTA CORP - Form 40-F

The ARC has considered whether the provision of services other than audit services is compatible with maintaining the auditors' independence. In May 2002, the ARC adopted a policy that prohibits TransAlta from engaging the auditors for prohibited categories of non-audit services and requires pre-approval of the ARC for other permissible categories of non-audit services, such categories being determined under the Sarbanes-Oxley Act.

Representatives of Ernst & Young LLP will be in attendance at the Meeting, will have the opportunity to make a statement if they so wish and will be available to respond to questions.

APPENDIX A

TRANSALTA CORPORATION
TRANSALTA UTILITIES CORPORATION
TRANSALTA ENERGY CORPORATION

AUDIT AND RISK COMMITTEE

CHARTER

A. **Establishment of Committee and Procedures**

1. Composition of Committee

The Audit and Risk Committee (the Committee) of the Board of Directors of TransAlta Corporation (the Corporation) shall consist of not less than three Directors. All members of the Committee shall be determined by the Board to be independent as required under the provisions of Canadian Securities Regulators' Multilateral Instrument 52-110 Audit Committees, Section 303A of the New York Stock Exchange rules and Rule 10A-3 of the U.S. Securities and Exchange Act of 1934, as such rules apply to audit committee members. All members of the Committee must be financially literate pursuant to both Canadian and U.S. securities requirements and at least one member must be determined by the Board to be an audit committee financial expert within the meaning of Section 407 of the Sarbanes-Oxley Act of 2002. Determinations as to whether a particular director satisfies the requirements for membership on the Committee shall be made by the full Board of Directors (the Board) at the recommendation of the Governance and Environment Committee.

2. Appointment of Committee Members

Members of the Committee shall be appointed from time to time by the Board, on the recommendation of the Governance and Environment Committee, and shall hold office until the next annual meeting of shareholders, or until their successors are earlier appointed, or until they cease to be Directors of the Corporation.

3. Vacancies

Edgar Filing: TRANSALTA CORP - Form 40-F

Where a vacancy occurs at any time in the membership of the Committee, it may be filled by the Board. The Board shall fill any vacancy if the membership of the Committee is less than three directors.

4. Committee Chair

The Board shall appoint a Chair for the Committee on the recommendation of the Governance and Environment Committee.

5. Absence of Committee Chair

If the Chair of the Committee is not present at any meeting of the Committee, one of the members of the Committee who is present at the meeting shall be chosen by the Committee to preside at the meeting.

6. Secretary of Committee

The Committee shall appoint a Secretary who need not be a director of the Corporation.

A-1

7. Meetings

The Chair of the Committee or any of its members may call a meeting of the committee. The Committee shall meet at least quarterly and at such other time during each year as it deems appropriate. In addition, the Chair of the Committee or any of its members may call a special meeting of the Committee at any time. Although the Company's Chief Executive Officer may attend meetings of the Committee, the Committee shall also meet in separate executive sessions.

8. Quorum

A majority of the members of the Committee present in person or by telephone or other telecommunication device that permit all persons participating in the meeting to speak to each other, shall constitute a quorum.

9. Notice of Meetings

Notice of the time and place of every meeting shall be given in writing (including by way of written facsimile communication or email) to each member of the Committee at least 48 hours prior to the time fixed for such meeting, provided, however, that a member may in any manner waive a notice of a meeting; and attendance of a member at a meeting constitutes a waiver of notice of the meeting, except where a member attends a meeting for the express purpose of objecting to the transaction of any business on the ground that the meeting is not lawfully called. Notice of every meeting shall also be provided to the external and internal auditors.

10. Attendance at Meetings

At the invitation of the Chair of the Committee, other Board members, officers or employees of the Corporation, the external auditors, outside counsel and other experts or consultants may attend any meeting of the Committee.

11. Procedure, Records and Reporting

Subject to any statute or the articles and by-laws of the Corporation, the Committee shall fix its own procedures at meetings, keep records of its proceedings and report to the Board generally not later than the next scheduled meeting of the Board.

12. Review of Charter

The Committee shall evaluate its performance and review and reassess the adequacy of its Charter at least annually or otherwise, as it deems appropriate, and if necessary propose changes to the Board.

13. Outside Experts and Advisors

The Committee Chair, on behalf of the Committee, or any of its members is authorized, at the expense of the Corporation, when deemed necessary or desirable, to retain independent counsel, outside experts and other advisors to advise the Committee independently on any matter.

B. General Mandate of Committee

The Committee provides assistance to the Board in fulfilling its oversight responsibility to the shareholders, the investment community and others, relating to the integrity of the Corporation's financial statements, the financial reporting process, the systems of internal accounting and financial controls, the risk identification assessment conducted by management and the programs established by management and the Board in response to such

assessment, the internal audit function and the external auditors' qualifications, independence, performance and reports. In so doing, it is the Committee's responsibility to maintain an open avenue of communication between the Committee, the external auditors, the internal auditors and management of the Corporation.

The function of the Committee is oversight. Management is responsible for the preparation, presentation and integrity of the interim and annual financial statements and related disclosure. Management of the Corporation is also responsible for maintaining appropriate accounting and financial reporting policies and systems of internal controls and procedures that are in compliance with accounting standards, applicable laws and regulations and that provide reasonable assurances that assets are safeguarded, that transactions are authorized, executed, recorded and reported properly.

While the Committee has the responsibilities and powers set forth herein, it is not the duty of the Committee to plan or conduct audits or to determine that the Corporation's financial statements are complete and accurate and are in accordance with generally accepted accounting principles. This is the responsibility of management and the external auditors. The designation of a member or members as an audit committee financial expert is based on that individual's education and experience, which the individual will bring to bear in carrying out his or her duties on the Committee. Designation as an audit committee financial expert does not impose on such person any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of the Committee and Board in the absence of such designation.

Management is also responsible for the identification and management of the Corporation's risks and the development and implementation of policies and procedures to mitigate such risks. The Committee's role is to provide oversight in order to ensure that the Corporation's assets are protected and safeguarded within reasonable business limits.

C. Duties and Responsibilities of the Committee

The Committee shall have the following specific duties and responsibilities:

1. Audit and Financial Matters:

The Committee shall:

(a) have direct responsibility for the compensation and oversight of the external auditors including nominating the external auditors to the Board for appointment by the shareholders at the Corporation's general annual meeting. In performing its function, the Committee shall:

- (i) review the experience and qualifications of the external auditors' senior personnel who are providing audit services to the Corporation and the quality control procedures of the external auditors, including obtaining confirmation that the external auditors are in compliance with Canadian and U.S. regulatory registration requirements;

- (ii) review and approve the basis and amount of the external auditors' fees and ensure the Corporation has provided appropriate funding for payment of compensation to the external auditors;

- (iii) review and discuss with the external auditors all relationships that the external auditors and their affiliates have with the Corporation and its affiliates in order to determine the external auditors' independence, including, without limitation, (i) requesting, receiving and reviewing, at least annually, a formal written statement from the external auditors delineating all relationships that may reasonably be thought to bear on the independence of the external auditors with respect to the Corporation, (ii) discussing with the external auditors any disclosed relationships or services that the external auditors believe may affect the objectivity and independence of the external auditors,

and (iii) recommending that the Board take appropriate action in response to the external auditors' report to satisfy itself of the external auditors' independence;

(iv) resolve disagreements between management and the external auditors regarding financial reporting;

(v) pre-approve audit services including all non-prohibited non-audit services provided by the external auditors; the Chair of the Committee, on behalf of the Committee, may at his discretion approve all non-prohibited non-audit services provided by the external auditors, and report all such approvals to the Committee at its next scheduled meeting;

(vi) inform the external auditors and management that the external auditors shall have access directly to the Committee at all times, as well as the Committee to the external auditors; and

(vii) instruct the external auditors that they are ultimately accountable to the Committee as representatives of the shareholders of the Corporation;

(b) review with management and the Corporation's external auditors the Corporation's financial reporting in connection with the annual audit and the preparation of the financial statements, including, without limitation, the annual audit plan of the external auditors, the judgment of the external auditors as to the quality, not just the acceptability, of and the appropriateness of the Corporation's accounting principles as applied in its financial reporting and the degree of aggressiveness or conservatism of the Corporation's accounting principles and underlying estimates;

(c) review with management and the external auditors all financial statements and financial disclosure and

(i) recommend to the Board for approval the Corporation's audited annual financial statements including the notes thereto and, Management's Discussion and Analysis ,

(ii) review any report or opinion to be rendered in connection therewith;

(iii) review with the external auditors the cooperation they received during the course of their review and their access to all records, data and information requested;

- (iv) discuss with management and the external auditors all significant transactions which were not a normal part of the Corporation's business;

- (v) review the management processes for formulating sensitive accounting estimates and the reasonableness of the estimates;

- (vi) review with management and the external auditors any changes in accounting principles and their applicability to the business;

- (vii) review with management and the external auditors alternative treatments of financial information within generally accepted accounting principles that have been discussed with management, ramifications of the use of such alternative disclosures and treatments and the treatment preferred by the external auditors;

- (viii) satisfy itself that there are no unresolved issues between management and the external auditors that could reasonably be expected to materially affect the financial statements;

- (d) review with management and the external auditors the Corporation's interim financial statements, including the notes thereto, Management's Discussion and Analysis and earnings release, and approve the release thereof by management to the public;
- (e) review and discuss with management and external auditors the use of pro forma or adjusted non-GAAP information and the applicable reconciliation;
- (f) on behalf of the Committee, the Chair shall review as required the public disclosure of financial information extracted or derived from the financial statements;
- (g) review with management at least annually the approach and nature of the disclosure of financial information and earnings guidance provided to analysts and rating agencies;
- (h) review and recommend to the Board for approval the Corporation's issuance and redemption of securities, financial commitments and limits, and any material changes underlying any of these commitments;
- (i) at least annually, obtain and review a report by the external auditors describing the auditing firm's internal quality-control procedures, any material issues raised by the most recent internal quality-control review or peer review of the auditing firm, any inquiry or investigation by governmental or professional authorities within the preceding five years undertaken respecting one or more independent audits carried out by the external auditors, and any steps taken to deal with any such issues;
- (j) review quarterly with senior management, the chief legal officer and, as necessary, outside legal advisors, and the Corporation's internal and external auditors, the effectiveness of the Corporation's internal controls to ensure the Corporation is in compliance with legal and regulatory requirements and with the Corporation's policies;
- (k) review quarterly with the chief legal officer, and, if necessary, outside legal advisors, significant legal, compliance or regulatory matters that may have a material effect on the financial statements of the business;
- (l) recommend to the Human Resources Committee the appointment and termination or transfer of the Vice-President, Internal Audit;

(m) review and consider, as appropriate, any significant reports and recommendations made by internal audit relating to internal audit issues, together with management's response thereto;

(n) review changes in accounting practices or policies and the financial impact these may have on the Corporation;

(o) discuss with the external auditors their perception of the Corporation's financial and accounting personnel, any recommendations which the external auditors may have, including those contained in the management letter, with respect to improving internal financial controls, choice of accounting principles or management reporting systems, and review all management letters from the external auditors together with management's written responses thereto;

(p) review with management, the external auditors and, as necessary, internal and external legal counsel, any litigation, claim or contingency, including tax assessments, that could have a material effect upon the financial position of the Corporation, and the manner in which these matters may be, or have been, disclosed in the financial statements;

(q) review annually the Annual Pension Report and financial statements of the Corporation's pension plans including the actuarial valuation, asset/liability forecast, asset allocation, manager performance and plan operating costs;

(r) together with the Human Resources Committee of the Board, review annually and as required the overall governance of the Corporation's Pension Plans, approve the broad objectives of the plans and report to the Board at least annually;

(s) review annually the internal audit department charter, review with the internal auditors the Corporation's internal control procedures, the scope and plans for the work of the internal audit group, the annual checklist of responsibilities of the Committee; review the adequacy of resources and ensure that the internal auditors have unrestricted access to all functions, records, property and personnel of the Corporation and inform the internal auditors and management that the internal auditors shall have unfettered access directly to the Committee at all times, as well as the Committee to the internal auditors;

(t) meet separately with management, the external auditors and internal auditors to review issues and matters of concern respecting audits and financial reporting;

(u) review the annual audit of expense accounts and perquisites of the Directors, the CEO and his direct reports, including the use of the Corporation's assets, as well as the Corporation's annual sponsorship, donations and political contributions;

(v) review management's processes relating to the assessment of potential fraud, programs and controls to mitigate the risk of fraud and the process put in place for monitoring the risks within targeted areas;

(w) review disclosures made to the Committee by the CEO and CFO during their certification process for the relevant periodic reports filed with securities regulators to ensure that information required to be disclosed is recorded, processed, summarized and reported within the time periods specified for the reporting period. Obtain assurances from the CEO and CFO as to the adequacy and effectiveness of the Corporation's disclosure controls and procedures and systems of internal control over financial reporting and that any fraud involving management or other employees who have a significant role in the Company's internal controls was reported to the Committee;

(x) ensure that the Corporation's business practices and ethical behaviours are communicated to employees and contractors on an annual basis, to review at least annually the Corporate Code of Conduct and the policies and practices in place to ensure compliance. Inquire of the internal and external auditors as to any instances of deviation from the Corporate Code of Conduct which has come to their attention and the action taken as a result of same;

(y) establish procedures for the receipt, retention and treatment of complaints received by the Corporation regarding accounting, internal accounting controls or auditing matters and the confidential, anonymous submission by employees of concerns regarding accounting or auditing matters;

(z) review all incidents, complaints or information reported through the Ethics Help Line and/or management;

A-6

(aa) review disclosure made to the Committee by the chief executive officer, chief financial officer and/or chief legal officer of a material violation of applicable securities laws, a material breach of a fiduciary duty under applicable laws or a similar material violation by the Corporation or by any officer, director, employee or agent of the Corporation, which has been reported to the Committee, determine whether an investigation is necessary regarding any such report and report to the board;

(bb) discuss with management and the external auditors any correspondence from or with regulators or governmental agencies, any employee complaints or any published reports that raise material issues regarding the Corporation's financial statements or accounting policies;

(cc) annually prepare a report from the Committee to shareholders or others, concerning the work of the Committee during that year in the discharge of its responsibilities; and

(dd) review and approve the Corporation's hiring policies for employees or former employees of the external auditors and monitor the Corporation's adherence to the policy.

2. Risk Management

The Committee provides oversight of management's establishment of an overall risk culture for the Corporation. The Committee shall oversee and approve the processes established and developed by management for the identification of the Corporation's principal risks, the evaluation of potential impact and the implementation of appropriate systems to mitigate and manage the risks.

The Committee shall:

(a) review annually with the Board management's assessment of the significant risks to which the Corporation is exposed; discuss with management the Corporation's policies and procedures for identifying and managing the principal risks of its business in order to ensure that management:

A. has identified appropriate business strategies taking into account the principal risks identified, and

B. is maintaining systems and procedures to manage or mitigate those risks, including programs of loss prevention, insurance and risk reduction and disaster response and recovery programs;

- (b) receive and review managements quarterly risk assessment update including an update on residual risks and emergent risks and next steps;
- (c) review the Corporation s enterprise risk management framework and reporting methodology;
- (d) review annually the Corporation s Financial and Commodity Exposure Management Policies and approve changes to such policies; review and authorize strategic hedging program guidelines and risk tolerance; review and monitor quarterly results of financial and commodity exposure management activities, including foreign currency and interest rate risk strategies, counterparty credit exposure and the use of derivative instruments;
- (e) review the Corporation s annual insurance program, including the risk retention philosophy and resulting uninsured exposure and corporate liability protection programs for directors and officers including directors and officers insurance coverage;
- (f) periodically consider the respective roles and responsibilities of the external auditor, the internal audit department, internal and external counsel concerning risk management of the Corporation and review their performance in relation to such roles and responsibilities; and

A-7

(g) annually, together with management report to the Board of Directors on:

- A. the Corporation's strategies in light of the overall risk profile of the Corporation;
- B. the nature and magnitude of all significant risks;
- C. the processes, policies, procedures and controls in place to manage these significant risks; and
- D. the overall effectiveness of risk management processes including highlighting risk management problems and the actions that have been or will be taken to address them.

D. Compliance and Powers of the Committee

(a) The responsibilities of the Committee complies with applicable Canadian laws and regulations, such as the rules of the Canadian Securities Administrators, and with the disclosure and listing requirements of the Toronto Stock Exchange, as they exist on the date hereof. In addition this Charter complies with the applicable US laws, such as the Sarbanes-Oxley Act of 2002, and the rules and regulations adopted thereunder, and with the New York Stock Exchanges' corporate governance standards, as they exist on the date hereof. This Charter is reviewed from time to time by the Corporate Secretary together with the Chair of the Committee in order to ensure on going compliance with such standards.

(b) The Committee may, at the request of the Board or on its own initiative, investigate such other matters as are considered necessary or appropriate in carrying out its mandate.

APPENDIX B

GLOSSARY OF TERMS

This Annual Information Form includes the following defined terms:

AEUB means the Alberta Energy and Utilities Board;

Alberta PPA means an Alberta government mandated power purchase arrangement;

availability means the weighted average equivalent availability factor, which is a term used to calculate availability for a pool or fleet of units of varying sizes. It is a measure of time and energy expressed in percentage of continuous operation, 24 hours a day, 365 days a year, that a generating unit is capable of generating electricity, whether or not it is actually generating electricity;

capacity means net maximum capacity that a unit can sustain over a period of time;

gigawatt hour or **GWh** means one million kilowatt hours of electrical power;

kilowatt or **kW** means 1,000 watts of electrical power;

kilowatt hour or **kWh** means one hour during which one kilowatt of electrical power has been continuously produced;

megawatt or **MW** means 1,000 kilowatts or one million watts of electrical power;

megawatt hour or **MWh** means 1,000 kilowatt hours;

PPA means a power purchase agreement having an initial term of five years or greater;

Edgar Filing: TRANSALTA CORP - Form 40-F

watt means the scientific unit of electrical power, being the rate of energy use that gives rise to the production of energy at a rate of one joule per second;

watt hour is a measure of energy production or consumption equal to one watt produced or consumed for one hour; and

WPPI means the Government of Canada's Wind Power Production Incentive available to approved wind generation facilities commissioned between April 1, 2002 and March 31, 2007.

It's obvious...the world is changing.

we're ready.

As one of western North America's leading power generation companies, TransAlta is uniquely positioned to take on the challenges of our changing times.

We have a highly diversified portfolio of generation assets primarily located in western North America with a variety of fuel types including renewables.

Our fuel diversity provides strong ongoing potential hydro, wind, geothermal, natural gas and coal.

We maintain a low- to moderate-risk business model, driven by our investment grade balance sheet and long-term contracts.

Our asset base can be continuously renewed for the long-term sustainability of the Company through efficient investments. This strength is reflected in the strong cash flow we generate and our balanced approach to capital allocation.

We consistently take a long-term view, keeping our focus on operations, costs and productivity, and sustaining a strong balance sheet. These fundamental keys to success are as true today as they were in the past.

Looking ahead, we see exciting market opportunities, and we have a sound strategy to deliver consistent and growing shareholder value.

We re ready...

TRANSALTA CORPORATION Annual Report 2007

2

Our customers know they can depend on us to supply their steadily growing demand for electricity.

We're well positioned to meet their needs for reliable, competitively priced electricity.

We keep TransAlta's existing assets in optimal condition to ensure they're available to supply our customers' critical electricity needs when called on. And, as key markets like Alberta grow, we're adding much-needed new supply — upgrading or retrofitting our existing plants and constructing new

renewable, cogeneration, and thermal assets.

Our goal is to build on our strengths to become a super-regional, western wholesale power generation company.

Electricity is a long-cycle, capital-intensive industry.

With a strong balance sheet and financial flexibility, TransAlta is ready and able to weather financial turbulence and commodity cycles.

Our financial strength enables us to contract our assets for better and longer terms, and provides us with the necessary access to Canadian and U.S. capital markets at all times.

It also gives us an edge in capitalizing on opportunities as they arise.

Our goal is to continue to strike the right balance between dividends, share buybacks, and growth investments to deliver consistent, sustainable value to our shareowners.

Above: *Centralia
Thermal Plant*

A number of advanced technologies are emerging for using coal as a cleaner fuel source.

New technologies, like carbon capture and storage, have the potential to reduce many of our environmental challenges. Once commercially viable, they will play a critical role in the retrofitting of TransAlta's thermal generation facilities.

Carbon capture is a technically viable, environmentally safe means of reducing

greenhouse gasses, and is ideally suited for our thermal energy plants.

These emerging technologies give us an excellent opportunity to prolong the life cycle of our thermal plants and continue to run them and serve our customers. And what's good for the environment is also good for business.

Above: *TransAlta employees are ready for the technological challenges ahead.*

TRANSALTA CORPORATION Annual Report 2007

8

We've been a sustainable development leader for over a decade and our efforts are producing results.

In the last few years we've reduced our sulphur dioxide intensity by 62 per cent and our nitrogen oxide intensity by seven per cent. We've also made significant strides in reducing mercury emissions. By testing new technology at our Sundance plant, we believe we'll be able to reduce our overall mercury emissions by another 70 per cent by 2010.

We have also taken steps to reduce our greenhouse gas emission intensity by improving the efficiency of our thermal plants and investing in alternative energy projects. Over the last decade, we've become Canada's leading provider of wind power generation and we continue to invest in this clean, renewable source of energy.

**reduced our
sulphur dioxide
intensity by**

We've been recognized for our environmental leadership, with a listing on the North American Dow Jones Sustainability Index (DJSI) and on the FTSE4Good global index. The Carbon Disclosure Project also selected us as one of 16 Canadian companies highlighted for proactively addressing the challenges posed by climate change.

Our goal is to continue to find ways to reduce our environmental footprint while delivering value to our shareowners.

Message to Shareholders

**STEVE
SNYDER**

**President &
CEO**

TransAlta had a strong and productive year in 2007. Thanks to all of our employees, we achieved record results for our comparable earnings and for cash flow. Return on capital employed increased, total shareholder returns exceeded our target, and our balance sheet at the end of the year remained strong.

We were successful in keeping operating costs below the rate of inflation. We successfully implemented the first phase of our Centralia fuel transition plan. We advanced our growth strategy by completing the uprate on our Sundance Unit 4 and began work on both the Keephills 3 and Kent Hills projects. We accomplished all this while meeting our safety targets, and achieving our lowest employee injury frequency rate.

These accomplishments, along with steadily improving financial results and the potential for positive market conditions ahead, position TransAlta to deliver low double-digit earnings per share growth and strong cash flow in 2008 and the years ahead.

Building a Strategic Advantage

Edgar Filing: TRANSALTA CORP - Form 40-F

We are a wholesale power generation company with financial strength and flexibility focused on the growing western markets. Our Company has elements of a regulated entity, due to the nature of our long-term contracts, and also that of an independent power producer as we also have access to merchant markets. That makes us unique relative to most of our peers in the North American energy sector.

Approximately 70 per cent of our capacity is contracted under government-mandated power purchase agreements or long-term contracts. These contracts support our low- to

MESSAGE TO SHAREHOLDERS

11

moderate-risk business profile and our capabilities to deliver steady, stable earnings and cash flow. They secure our commitment to growing total shareholder returns. Our modest merchant exposure provides market upside potential.

The soundness of this strategy has been seen in our performance over the last 10 years. That period was marked by challenging credit and commodity markets. Many independent power producers went bankrupt. At TransAlta, we not only retained our investment grade credit rating, we improved it, while maintaining our dividend.

We are a
wholesale power
generation
company with
financial strength
and flexibility
focused on the
growing western
markets.

A strong balance sheet and investment grade credit rating benefit investors in a long-cycle, capital intensive, commodity-sensitive business. It improves our competitiveness by lowering our cost of capital compared to non-investment grade companies. It enables TransAlta to contract its assets with customers on more favourable terms. We prize financial flexibility, which allows us to access the capital markets at the lowest all-in cost of financing. This financial strategy has supported our strong total shareholder return over the last decade.

We have consistently paid a dividend. I believe the dividend is an important part of the value proposition we offer shareholders. In the last decade we have paid over \$2 billion in dividends to shareholders. On February 7th, 2008, TransAlta's Board of Directors announced an increase in the annual dividend to \$1.08 from \$1.00. This eight per cent increase reflects our growing earnings, the confidence in our business, and our commitment to build sustainable earnings and dividend growth.

In addition to this steady dividend, our capital allocation decisions balance investment in new capacity, share repurchases, and opportunities to optimize the portfolio as we did early in 2008 with the sale of our Mexican business for \$304 million. Growing economies in our markets have created some very attractive opportunities to create shareholder value by investing in additional capacity such as renewable energy and co-generation facilities. These new assets can deliver excellent returns and long-term, stable cash flow.

Share buyback is also part of our balanced capital allocation plan. In 2007, under our normal course issuer bid (NCIB) we spent \$75 million to purchase approximately 2.4 million shares. For 2008, as we look at our requirements for liquidity, the need to maintain our key financial ratios, and cash from the divestiture of our Mexican business, we expect to continue to repurchase shares in accordance with the TSX NCIB rules.

Our unique combination of resources and proven strengths differentiates our Company and positions it to fully capture the upside potential from today's buoyant electricity markets. Our legacy assets are profitable cash generators. We own long-term coal reserves, untapped hydro resources, optioned wind development sites, reservoirs for CO2 storage, and highly sought brownfield sites with connectivity to transmission. We have access to water and

On Feb. 20, 2008, TransAlta announced the sale of its Mexican business (511 MW gas-fired plants). The sale is still subject to regulatory approval. For a more detailed breakdown of our assets, please turn to page 26.

multiple fuels. All provide TransAlta with a multitude of development options to profitably expand our portfolio, meet growing power demand, and create value for shareowners.

In addition, we have the skills required to achieve top decile operations at our plants and mines, build out our fleet, navigate and influence regulatory and environmental challenges, and optimize our portfolio to capture near-term upside and protect shareowners from increasing price volatility.

Ready for Change

Simply put, our industry must struggle to break the current triple E equation: energy growth = economic growth = environmental problems.

The environment we operate in is changing.

Simply put, our industry must struggle to break the current triple E equation: energy growth = economic growth = environmental problems. It's hard to grow the economy and the standard of living competitively without using more energy, and it's hard to use more energy and not impact the environment.

Longer-term, the industry is facing one of the most profound technological shifts in its history. This change is driven by the need to reduce the power industry's environmental footprint, particularly the production of greenhouse gases. Consequently, we are going to have to implement new technologies that can cost-effectively reduce our emissions and still allow our plants, especially our thermal-fueled facilities, to be competitive. That's a tough challenge.

But we saw this shift coming many years ago and have been preparing for it.

We have been a leader in developing renewable power and the purchase of emission offsets. Both initiatives will help us to bridge the transition until full-scale carbon capture

MESSAGE TO SHAREHOLDERS

MANAGEMENT TEAM (left to right)

Richard Langhammer, Executive Vice-President, Generation Operations; Ken Stickland, Executive Vice-President, Legal; Will Bridge, Executive Vice-President, Generation Technology & Procurement & Material Management; Steve Snyder, President & Chief Executive Officer; Dawn Farrell, Executive Vice-President, Commercial Operations & Development; Mike Williams, Executive Vice-President, Human Resources, Information Technology & Communications; Brian Burden, Executive Vice-President & Chief Financial Officer

technology can be developed and commercialized. We also continuously invest in our plants to improve efficiency and increase productivity which also minimizes emissions. Over the last several years, we have put in place a rigorous asset-planning process to predict the optimal timing of investments in our fleet.

TransAlta, like our industry, is at a key juncture in its history. Ahead of us are the best growth opportunities and market conditions we have seen.

We are working with policy-makers to develop an economic framework to provide incentives for investment in CO₂ capture and sequestration. As we transition to this new framework, the terms of our Alberta power purchase arrangements (PPA's) allow us to recover the costs related to legislated changes that affect our Alberta plants.

We are also partnering with key equipment manufacturers to obtain the necessary incentives and support to build a pilot project on a TransAlta site. By selecting the technology that will allow us to meet the most exacting environmental standards while delivering the lowest-cost electricity to our customers, we can continue to grow earnings after the Alberta PPAs expire.

In 2007 we continued our progress in evaluating ways to cost-effectively run our thermal plants for life cycles beyond 40 years while meeting the toughest environmental standards. This has the potential to create the greatest value for the Company in the coming years. Our high-level estimates today show a compelling advantage in prolonging our thermal plants' life cycle relative to building a new plant.

Between 2008 and 2009, we will conduct detailed engineering assessments on each of our units to determine more precisely what technical changes are required to operate these assets for an additional 10-20 years. We will also continue to work toward finding the right CO₂ capture technology. This won't

Edgar Filing: TRANSALTA CORP - Form 40-F

be easy, but the potential payoff for our shareowners will be compelling if the all-in cost of investing in our current fleet proves to be superior to building new plants.

There is an urgent need for new power capacity in many of our markets. Reserve margins are nearing or are already below 15 per cent. That is an industry warning signal for decreased reliability of supply, and it creates opportunities for new investments in North America. I believe these investment opportunities have returns that are now better than what we could only find internationally in years past. To take advantage of these conditions, we will focus our development efforts on western North America. Our goal is to build on our strength as a super-regional, western wholesale power competitor.

TRANSALTA CORPORATION Annual Report 2007

To succeed in this effort, we'll have to navigate through some tough impediments—transmission constraints, rising component costs, and equipment and labour shortages. But, with nearly 100 years of operating experience behind us, I believe we'll be successful. In the recent past, we have developed key long-term strategic supplier relationships with industry leaders to help secure materials and services when needed and at more predictable prices.

We'll also invest in technologies where we have proven competencies and enjoy a competitive edge: wind, natural gas co-generation, geothermal, and small-scale hydro. We are currently considering approximately 1,000 megawatt (MW) of project opportunities in these segments.

A decade ago, our industry believed it would move to a deregulated wholesale power model. This has not happened. The U.S. in particular is now a patchwork of traditional rate-of-return-based power companies and others with hybrid elements of both market-based and traditional regulation. Recognizing that reality, and consistent with our growth objective and retaining a low-to-moderate risk profile, we must now consider opportunities to acquire regulated assets. These efforts will be focused on the western North American markets as we build an even stronger competitive position.

TransAlta, like our industry, is at a key juncture in its history. Ahead of us are the best growth opportunities and market conditions we have seen. But there are also challenges—including environmental challenges, technological change, an increasing trend to more regulatory oversight, transmission constraints, and considerable cost uncertainties around alternate fuel sources. With a strong balance sheet and a disciplined and balanced approach to capital allocation, we are well positioned to capitalize on the market potential and deliver excellent shareholder returns, while meeting these challenges head on.

All these efforts are supported by our superb team of employees. Time after time they have demonstrated resiliency, an ability to rise to challenges, a focus on shareholder value, and an unwavering dedication to excellence. Their skills, combined with the contribution of our worldwide suppliers and our commitment to our customers, ensures we can deliver on the opportunities ahead of us. I want to sincerely thank our employees, our suppliers, and our customers for their role in our mutual success.

Change is coming, and we're ready. As always, thank you for your support.

A strong balance sheet and investment grade credit rating benefit investors in a long-cycle, capital intensive, commodity-sensitive business.

Sincerely,

STEVE SNYDER

President & Chief Executive Officer

MESSAGE TO SHAREHOLDERS

Performance Metrics for a Changing World

Availability and Production

	05	06	07	Target 08 10
Availability (%)	89.4	89.0	87.2	90 92
Production (GWh)	51,810	48,213	50,395	Optimize

Availability is a key factor in determining revenue in many of our contracts. Availability is the percentage of time a generating unit is capable of running, regardless of whether or not it is generating electricity. As plants need maintenance and occasionally break down, 100 per cent availability over an extended period of time is not achievable. Our goal is to achieve top decile availability in the industry of 92 per cent.

	05	06	07	Target 08 10
OM&A (\$/installed MWh)	8.16	7.93	7.81	Offset inflation

Production is also a significant driver of revenue in certain contracts. Production is the amount of electricity generated and is measured in gigawatt hours (GWh). Our goal is to optimize production through planned maintenance programs, the use of monitoring programs to minimize unplanned outages and derates, and generate power from our plants when it is most economic.

Productivity

	05	06	07	Target 08 10
Injury Frequency Rate	1.41	1.96	1.76	Reduce >10% annually
Sustaining Capex (\$millions)	287	207	371	Target 08 10 290 3251

Managing our maintenance and administration costs is essential to improving the bottom line. Productivity is measured as operations, maintenance and administration (OM&A) expense per installed megawatt hour (MWh). Our goal is to offset the impact of inflation on OM&A.

1 Based on average yearly spend for 2008 2010

Safety

	05	06	07	Target 08 10
Earnings per share (comparable basis) (\$)	0.82	1.16	1.31	Increase >10% annually
Cash from operations (\$millions)	620	490	847	850 950

Safety is a core value at TransAlta. We take it very seriously and measure ourselves against industry-wide standards. The Injury Frequency Rate (IFR) measures all fatal, lost time and medical aid injuries. While our ultimate goal is to have zero injury incidents, we are aggressively targeting a 10 per cent reduction year over year in our IFR.

Sustaining Capital Expenditures

	05	06	07	Target Range Minimum
Cash flow to	4.7	5.5	6.6	

Edgar Filing: TRANSALTA CORP - Form 40-F

We are in a long-cycle capital-intensive business that needs consistent and stable capital expenditures. Sustaining capital expenditures are investments made to maintain our current operations. They include routine and major maintenance on our plants, equipment for our mines, and investment in our information systems. Our goal is to make sustaining capital expenditures more predictable and in line with our long-range plans.

interest (times)				of 4
Cash flow to total debt (%)	23.0	26.2	30.7	Minimum of 25
Debt to invested capital (%)	43.9	44.5	46.8	Maximum of 55
				Target
	05	06	07	08 10
Comparable ROCE (%)	7.4	9.0	9.7	>10
TSR (%)	47.6	9.2	29.0	>10 annually

Earnings Per Share and Cash Flow

Comparable earnings per share (EPS) is frequently used to measure a company s ongoing profitability. Our target is to generate low double-digit EPS growth on a comparable basis annually.

Cash generated from operations is used to maintain our equipment, meet our debt repayment obligations, return capital to shareowners through dividends and share buybacks, and invest in new capacity. Our goal is to generate cash from operations of \$850 \$950 million per year.

Investment Ratios

Financial strength and flexibility are critical to the Company s ability to create value, capitalize on opportunities and manage industry cyclicality. Our goal is to maintain investment grade credit ratings and operate the business within established financial ratio ranges. These ratios include: cash flow to interest, cash flow to total debt, and debt to invested capital. Credit rating agencies use these ratios when evaluating the financial strength of the Company.

Sustainable Long Term Shareholder Value

We measure returns to our shareholders and investors in two ways: comparable return on capital employed (Comparable ROCE) and total shareholder return

(TSR). Comparable ROCE measures the economic value created from capital investments. TSR is the total amount returned to investors over a specific holding period and includes capital gains and dividends. Our goal is to achieve greater than 10 per cent for both ROCE and TSR.

TRANSALTA CORPORATION Annual Report 2007

Sustainable Development

Committed to a Sustainable Future

At TransAlta, we see sustainability as a responsible and pro-active balancing of careful growth, environmental stewardship, and positive and rewarding relationships with our employees and the communities near our operations. This approach has positioned the Company as a leader in sustainable development, a responsibility we take very seriously.

We have established a pattern of taking action and testing solutions ahead of regulation. Examples include mercury reduction testing at our Alberta plants, early and sustained greenhouse gas emissions trading and developing markets for fly-ash, a by-product of coal combustion.

By voluntarily leading the way, we can share what we learn with policy-makers and the rest of industry, typically resulting in more workable and practical answers. TransAlta is a trusted industry advisor to governments and is involved in emerging regulations across all of our jurisdictions.

Economic Sustainability

During 2007, the Governments of Canada, Alberta, Ontario, and Washington state each released their environmental plans to tackle air emissions. TransAlta is working with all governments to encourage broad, uniform initiatives. We believe a consistent approach will further environmental achievements and better support communities and economic growth.

The rapidly evolving regulatory framework has resulted in closer scrutiny of how companies manage environmental risk. TransAlta's continued

Environmental Sustainability

Our emissions reduction strategy encompasses: investigating emission reduction technologies and improving fuel usage; technology retrofits for older facilities or in building new plants; offsets purchasing; and growing our renewables portfolio.

Air emissions associated with generating electricity are a key environmental issue. We have continually decreased our greenhouse gas emissions intensity since 2000, and have been leading a major mercury emission reduction project for the purpose of decreasing our mercury emissions in Alberta by 70 per cent by 2010. TransAlta's nitrous dioxide and nitrous oxide emission intensities have also decreased steadily since 2000. We will continue to aggressively pursue technologies and operational improvements, knowing that we are leading change in our industry.

For the last two years, we have examined a number of options for low carbon power generation. While we believe that the responsible approach is to continue to investigate alternative or complementary solutions, we know that we are, and will continue to be, primarily a thermal power provider. The challenge is to keep it viable and socially acceptable.

We believe carbon capture and sequestration is a significant part of the solution. Our intent is to prove the possibilities of carbon capture in Alberta in conjunction with other industry members and government.

Social Sustainability Workplace Safety and Community Relations

TransAlta's Environment, Health, and Safety management system ensures that our safety processes continually improve and that performance is communicated to the Board level. Our long-standing

Edgar Filing: TRANSALTA CORP - Form 40-F

investment grade rating is one indicator of how the market evaluates our sustainability efforts.

environment, health and safety program, Target Zero, guides the organization toward our goal of zero safety incidents.

TransAlta's total shareholder return in 2007 was 29 per cent. Comparable earnings were up 13 per cent at \$1.31 per share compared to \$1.16 per share in 2006. Cash flow increased to \$847 million in 2007. We use this cash to maintain our plants, pay down debt, return capital to shareholders through dividends and share buybacks, and reinvest in new assets. Over the last 10 years TransAlta has delivered 140 per cent cumulative total shareholder return; including more than two billion dollars in dividends.

In 2007, we succeeded in improving employee safety performance by 50 per cent, achieving our best safety record ever. We believe this success has been achieved through increased management commitment and intervention and through implementing rigorous safety programs, inspections and audits at all of our facilities. However, our contractor injury frequency rate increased by 17 per cent. This is a significant

SUSTAINABLE DEVELOPMENT

2007 data are estimates based on best available data at time of report production. For more detail, refer to the 2007 Report on Sustainability . Total GHG emissions increased from 2006 to 2007 due largely to higher plant availability.

concern for us as it is our goal to keep all of our employees and contractors safe while on our sites. Contractor safety management is a major focus area as we move forward.

Labour issues continued to be a challenge in 2007, along with an aging workforce. We will continue to address both of these issues with new strategies for recruitment, succession planning, and rotational job placement to keep our people challenged and engaged.

Public consultation is an integral part of our business, as we strive to minimize our impacts. A stakeholder relations strategy was developed at our Alberta Thermal operations in 2007, formalizing processes at the heart of our operations. In New Brunswick, stakeholder consultation for our newest wind farm, Kent Hills, was instrumental in educating the public and regulators who had never been exposed to wind generation, and resulted in permits being issued in a very short nine months.

Our involvement with Aboriginal communities near our operations continued with funding of elder programming, scholarship programs and targeted community involvement. We built upon our relationship with the Paul Band near our Alberta Thermal operations with the funding of a liaison position. We

also made considerable progress in providing awareness to many First Nations of our transmission business through a Transmission Advisory Committee.

Community investment continues to be a key part of our commitment to sustainable communities around our operations. Details on our involvement in 2007 are described on the following page.

Looking Ahead

We are pursuing organic growth opportunities in the western U.S. and Canada with the goal of establishing a super-regional, wholesale generation company. We will focus on increasing our renewables portfolio, and in the short-term pursue wind, natural gas co-generation, geothermal, and small-scale hydro opportunities. Our early involvement in offsets trading has become a competitive advantage.

TransAlta's 2007 Report on Sustainability will be released in June 2008 at www.transalta.com.

Connecting with Communities

At TransAlta, strengthening communities where our employees live and work is a commitment we take seriously. Investing over \$5 million in the focus areas of arts and culture, environment, education, and health and human services, as well as employee and retiree volunteer time, exemplifies this commitment.

Building on our sustainable business practices, we committed \$1.25 million to create the TransAlta Professor of Environmental Management and Sustainability at the Institute of Sustainable Energy, Environment and Economy (ISEEE) at the University of Calgary. Former TransAlta Vice-President Sustainable Development Dr. Bob Page leads innovative research, education, and outreach as part of this important initiative.

We extended our relationships with existing partners and made significant new investments, including a \$600,000 donation to the Fast Track early childhood intervention program at Hull Child and Family Services. This school-based program focuses on changing school cultures and individual behaviours, while creating additional opportunities for youth and families. We also provided significant support to The Young Canadians School of Performing Arts through the Calgary Stampede Foundation, providing continued high-quality

training and year-round program opportunities for students. We also furthered our investment in the TransAlta Tri-Leisure Centre, a multi-use community health and wellness facility located near our Alberta Thermal operations.

Our employees and retirees are actively engaged in their communities. When communities near our Centralia, Washington operations experienced severe flooding, TransAlta dispatched teams of employees to support rescue and relief efforts. In less than 11 days, these employees contributed 2,000 hours to the community along with financial and in-kind donations. The Company further responded by contributing heavy equipment, warehousing and distribution expertise, in addition to \$50,000 in financial support.

Thanks to employee and retiree commitment to the United Way, TransAlta's United Way campaign achieved a new record of over \$1.3 million, including a dollar-for-dollar corporate match. Employees contributed about 14,400 hours to the community, through volunteer projects like painting seniors' homes, a youth camp cleanup, food bank drives, building a school playground and Days of Caring. Senior executives led by example, providing expertise to community organizations through the Company's Executive Connections program.

TRANSALTA'S INVESTMENT

in the ISEEE at the University of

Calgary is part of our \$5 million

commitment to communities

where our employees live and work.

CONNECTING WITH COMMUNITIES

Message from the Chair

DONNA SOBLE

KAUFMAN

Chair of the Board

In 2007, TransAlta continued to execute on its plan and deliver value to our shareowners. It was a good year for your Company and we are pleased to report record results in several key areas. This reflects our continued focus on consistent, long-term value for our shareowners. I believe it also reflects the hard work and dedication of TransAlta's employees.

Our industry is experiencing a period of unprecedented change. We are seeing increasing financial turbulence, varying commodity cycles and fundamental shifts in environmental legislation and regulatory frameworks.

Your Company is Ready

We are ready to weather this change because we have continued to focus on maintaining our strong balance sheet while striking an effective balance between dividend growth, share buybacks, and capital investment. We also have a strategy fully supported by your Board to continue to create shareowner value, by capitalizing on TransAlta's resources and proven skills to become a super-regional, wholesale power company.

TransAlta is ready because we have continued to invest in new and innovative technologies, and we have continued to champion sustainable development. We are proud that leading organizations like the Carbon Disclosure Project have recognized our efforts. In 2007, it selected TransAlta as one of 16 Canadian companies highlighted for proactively addressing the challenges posed by climate change. It ranked TransAlta third of 200 in a survey of Canada's largest companies.

Edgar Filing: TRANSALTA CORP - Form 40-F

Finally, our commitment to an ethical culture and strong corporate governance provides us with a solid foundation to operate from, which is critically important in the face of increasing change and industry-wide instability. On this front, TransAlta is not only keeping pace with Canada's rising governance standards, we are continuing to lead the way. For example, in the area of compensation we have

TRANSALTA CORPORATION Annual Report 2007

20

been recognized by the *Globe & Mail* newspaper for being among the first to adopt share ownership instead of options as the most responsible manner to align management incentives with shareowner interests. And, for the sixth consecutive year, the newspaper recognized TransAlta as one of the best-governed corporations in Canada, and the top company in the utilities sector for corporate governance. In the past, we've also been awarded an AAA rating for corporate governance from the Clarkson Centre for Business Ethics and Board Effectiveness.

Your Company is recognized for having a highly independent Board of Directors with an effective combination of skill and expertise. Our directors have broad experience in the energy industry, finance, risk management, operations, law and current oversight practices. This knowledge base, together with the expertise of our management team, has resulted in the structures and processes that provide the transparency our investors expect.

In the years to come, we will continue to make investments in sustainability and focus on governance initiatives, not just because it is the right thing to do, but because it makes good business sense. Over the past several years, this has become a consistent theme in Board discussions with our management team. Building a sustainable company that continually drives toward long-term growth for our shareowners is inherent in our governance model.

Our commitment to our shareowners is to deliver a strong, sustainable yield with a low-to-moderate risk profile. Along with our management team, we have always taken a long-term approach to our business. We recognize that you, our shareowners, entrust this duty to us and we are determined to continue to earn that trust.

After a record year in 2007, we have turned our attention to 2008 and beyond, with your interests foremost in our minds.

Thank you for placing your confidence in us.

DONNA SOBLE KAUFMAN

Chair of the Board

February 26, 2008

MESSAGE FROM THE CHAIR

BOARD OF

DIRECTORS

(left to right)

Gordon Giffin,

Kent Jespersen,

Luis Vázquez Senties,

Tim Faithfull,

Martha Piper,

Steve Snyder,

Stanley Bright,

Donna Soble Kaufman,

Bill Anderson,

Michael Kanovsky,

Gordon Lackenbauer

WILLIAM D. ANDERSON *Corporate Director* Mr. Anderson was President of BCE Ventures (a subsidiary of BCE Inc.) from 2005 and prior to that, the CFO of BCE Inc. and of Bell Cablemedia plc. As President of BCE Ventures he was responsible for a number of significant operating companies as well as being CEO of Bell Canada International Inc. In his CFO roles, Mr. Anderson was responsible for all financial operations of the respective companies and he executed numerous debt and equity financings, corporate acquisition and disposition transactions as well as corporate and operational restructurings.

Mr. Anderson is a director of Gildan Activewear Inc. and of MDS Inc. He is a past director at BCE Emergis Inc., Bell Cablemedia plc, Bell Canada International Inc., CGI Group Inc., Four Seasons Hotels Inc., Sears Canada Inc., and Videotron Holdings plc. At TransAlta, Mr. Anderson is Chair of the Audit and Risk Committee of the Board.

Mr. Anderson holds a bachelor's degree in business administration from the University of Western Ontario (London, ON), and is a Chartered Accountant.

STANLEY J. BRIGHT *Corporate Director* Mr. Bright was President, CEO, and Chairman of MidAmerican Energy Holdings Company from 1997 to 1999. He was also President, CEO, and Chairman, and CEO, of predecessor companies, including the Iowa-Illinois Gas & Electric Company (IIG&E), from 1991 to 1997. As the CEO of IIG&E, Mr. Bright led the consolidation of a number of Midwest utilities in anticipation of emerging market competition, giving rise to the creation of MidAmerican. As the President, CEO, and Chairman of the new entity, Mr. Bright led the realization of significant synergies while working through the post-merger transition. The company also structured a long-term rate plan with the Iowa Public Service Commission. Mr. Bright retired as CEO of MidAmerican in 1999 but continued as a director until 2006.

At TransAlta, Mr. Bright is Chair of the Human Resources Committee of the Board.

Mr. Bright holds a bachelor's degree in accounting from The George Washington University (Washington, DC), and is a Certified Public Accountant.

TIMOTHY W. FAITHFULL *Corporate Director* Mr. Faithfull is a 36-year veteran of Royal Dutch/Shell plc, where he filled diverse roles that spanned the globe. As President and CEO of Shell Canada Limited, he was responsible for bringing the \$6 billion Athabasca Oil Sands Project on line, the first fully integrated oil sands venture in 25 years. Mr. Faithfull has extensive experience with commodity exposure and risk management, the result of his time directing the global crude oil trading operation for the Shell International Trading and Shipping Company from 1993 to 1996.

Mr. Faithfull is a director of Canadian Pacific Railway Limited, the Shell Pension Trust Limited, and AMEC plc. At TransAlta, Mr. Faithfull is a member of the Audit and Risk Committee and the Human Resources Committee of the Board.

Mr. Faithfull holds a bachelor's of arts degree in economics from the University of Oxford (Oxford, UK).

Edgar Filing: TRANSALTA CORP - Form 40-F

GORDON D. GIFFIN *Corporate Director, Lawyer and Senior Partner, McKenna, Long & Aldridge LLP.* From 1997 to 2001, Ambassador Giffin served as the United States Ambassador to Canada with responsibility for managing Canada/U.S. bilateral relations, including energy and environmental policy. Prior to this appointment, he practiced law for 18 years as a senior partner in Atlanta, GA and Washington, DC. His practice focused on energy regulatory work at the state and federal level. He previously served as Chief Council and Legislative Director to U.S. Senator Sam Nunn, with responsibility to manage the legal and legislative operations of the office. In 2001, he returned to private practice where he specializes in state and federal regulatory matters, including those related to trade, energy and trans-border commerce.

He is a director of AbitibiBowater, Canadian Imperial Bank of Commerce, Canadian National Railway Company, Canadian Natural Resources Limited, and Ontario Energy Savings Ltd. At TransAlta, Ambassador Giffin is Chair of the Governance and Environment Committee of the Board.

Ambassador Giffin holds a bachelor of arts from Duke University (Durham, NC) and a juris doctorate from Emory University School of Law (Atlanta, GA).

C. KENT JESPERSEN *Corporate Director and Chair and CEO of LaJolla Resources International Ltd.* He also has held senior executive positions with NOVA Corporation of Alberta, Foothills Pipe Lines Ltd., and Husky Oil Limited before assuming the presidency of Foothills Pipe Lines Ltd. and later, NOVA Gas International Ltd. At NOVA, he led the non-regulated energy services business (including energy trading and marketing) and all international activities.

Mr. Jespersen is the Chairman and a director of Orvana Minerals Ltd. and CCR Technologies Ltd., and a director of Matrikon Inc. and of Axia NetMedia Corporation. At TransAlta, Mr. Jespersen is a member of the Governance and Environment Committee and the Human Resources Committee of the Board.

Mr. Jespersen holds a bachelor of science in education and a master of science in education from the University of Oregon (Eugene, OR).

MICHAEL M. KANOVSKY *Corporate Director and Independent Businessman* He co-founded Northstar Energy with initial capital of \$400,000 and helped build this entity into an oil and gas producer that was sold to Devon Energy for approximately \$600 million in 1998. During this period, Mr. Kanovsky was responsible for strategy and finance, as well as merger and acquisition activity. He initiated Northstar's entry into electrical co-generation through its wholly owned power subsidiary, Powerlink Corporation. Powerlink developed one of the first independent power producer (IPP) gas-fired co-generation plants in Ontario and also internationally. In 1997, he founded Bonavista Energy, which has grown to a present-day market cap of approximately \$6 billion.

Mr. Kanovsky is a director of Accrete Energy Corporation, ARC Energy Trust, Devon Energy Corporation, Bonavista Energy Trust, and Pure Technologies Inc. At TransAlta, he is a member of the Audit and Risk Committee and the Governance and Environment Committee of the Board.

Mr. Kanovsky, a professional engineer, holds a bachelor of science in mechanical engineering from Queen's University (Kingston, ON) as well as a master of business administration from the Ivey School of Business at the University of Western Ontario (London, ON).

DONNA SOBLE KAUFMAN *Lawyer and Corporate Director* Mrs. Kaufman is a former partner with Stikeman Elliott, an international law firm, where she practiced antitrust law. She has served on a number of boards since 1987, when she became a director of Selkirk Communications Limited, a diversified communications company. A year later she was appointed Chair of the Board and President and CEO. Several other directorships followed. In addition to TransAlta, Mrs. Kaufman currently serves on the boards of BCE Inc. and Bell Canada. She is also a director of HISTOR!CA, a private sector education initiative, and a member of the Canadian Advisory Board of Catalyst, a non-profit organization working to advance women in business.

At TransAlta, Mrs. Kaufman is the Chair of the Board of the Company and an ex-officio member of all committees of the Board.

Mrs. Kaufman holds a Bachelor of Civil Law degree from McGill University, Montreal, and a Master of Laws degree from the Université de Montréal.

BOARD OF DIRECTORS

GORDON S. LACKENBAUER *Corporate Director* Mr. Lackenbauer was Deputy Chairman of BMO Nesbitt Burns Inc. from 1990 to 2004. Prior to this, he was responsible for the principal activities of the firm, which included fixed income sales and trading, equity and debt, new issue underwriting and syndication. Mr. Lackenbauer has worked with many of Canada's leading utilities and has frequently acted as an expert financial witness testifying on the cost of capital, capital structure, and the fair rate of return before the Alberta Utilities Commission (then the APUB), the National Energy Board, and the Ontario Energy Board. His clients included Alberta Power (now ATCO Electric), Consumers' Gas IPL (now Enbridge), and TransCanada PipeLines, among others.

Mr. Lackenbauer is a director of NAL Oil & Gas Trust, CTVglobemedia Inc., and is a Governor of Mount Royal College. He was a director of Tembec Inc., until August 2007. At TransAlta, he is a member of the Audit and Risk Committee and the Governance and Environment Committee of the Board.

Mr. Lackenbauer holds a bachelor of arts in economics from Loyola College (Montreal, QC), as well as a master of business administration from the University of Western Ontario (London, ON). He is also a Chartered Financial Analyst.

MARTHA C. PIPER *Corporate Director* Dr. Piper was President and Vice-Chancellor of the University of British Columbia from 1997 to 2006. Prior to her appointment at the University of British Columbia, she served as Vice-President, Research at the University of Alberta. She served on the Boards of the Alberta Research Council, the Conference Board of Canada, and the Centre for Frontier Engineering Research. Dr. Piper was also appointed by the Prime Minister of Canada to the Advisory Council on Science and Technology, and she served as a member of the Canada Foundation for Innovation.

Dr. Piper is a director of the Bank of Montreal and of Shoppers Drug Mart Corporation, and is a member of the Canadian delegation to the Trilateral Commission, an organization fostering closer cooperation among the core democratic industrialized areas of the world. At TransAlta, Dr. Piper is a member of the Human Resources Committee of the Board.

Dr. Piper holds a bachelor of science in physical therapy from the University of Michigan (Ann Arbor, MI), a master of arts in child development from the University of Connecticut (Storrs, CT), and a doctorate of philosophy in epidemiology and biostatistics from McGill University (Montreal, QC). She has received honorary degrees from 15 international universities. She is an Officer of the Order of Canada and a recipient of the Order of British Columbia.

LUIS VÁZQUEZ SENTIES *Corporate Director and Independent Businessman* Mr. Vázquez is founder, President, CEO, and Chairman of Grupo Diavaz, an international constructor of offshore oil and gas platforms, developer of oil and gas fields, and a distributor of natural gas in Mexico. Grupo Diavaz began as a Mexican underwater diving operation that grew to become the world's second largest firm of its kind, servicing the offshore oil and gas industry in both exploration and production efforts.

Mr. Vázquez is Chairman of the Mexican Gas Association and vice-president of the Mexico chapter of the World Energy Council. He is past director of the American Gas Association. At TransAlta, Mr. Vázquez is a member of the Human Resources Committee of the Board.

STEPHEN G. SNYDER *Director, President and Chief Executive Officer of TransAlta Corporation since 1996.* Mr. Snyder guided TransAlta through its evolution from an Alberta-focused, regulated utility to an international power generator. Prior to joining TransAlta, Mr. Snyder held several CEO posts, namely with Camco Inc. (a subsidiary GE Canada Inc.), and Noma Industries Limited. While at GE, Mr. Snyder led the transformation of GE's Canadian-based businesses into global competitors. At Noma, he built a deeply rooted Canadian consumer products manufacturer into a North American industrial products company.

Mr. Snyder is a director of the Canadian Imperial Bank of Commerce and Chair of the Calgary Stampede Foundation. He is Chair of the Alberta Secretariat to End Homelessness. He is the past-chair of the Calgary Committee to End Homelessness, the Canada-Alberta ecoEnergy Carbon Capture & Storage Task Force, and of the Conference Board of Canada.

Mr. Snyder holds a bachelor of science in chemical engineering from Queen's University (Kingston, ON) as well as a master of business administration from the University of Western Ontario (London, ON).

TransAlta's directors are experienced senior business leaders bringing a broad mix of skills in the electricity sector, finance, law, government, regulatory and corporate governance. On behalf of TransAlta's shareholders, the Board of Directors is responsible for the stewardship of the Corporation, establishing overall policies and standards and reviewing strategic plans. In 2007, the directors met on 17 occasions, including one special meeting devoted exclusively to TransAlta's corporate strategy and direction.

CORPORATE

GOVERNANCE

After a detailed examination of the relationships between each of the directors and TransAlta, the Board determined that 10 of the existing 11 board members are independent, excluding only Stephen Snyder, President and CEO of the Company. All of the members of each of the committees of the Board are independent. In 2007, the Board had three committees, which are briefly described below. Further detailed information with respect to TransAlta's approach to corporate governance is contained in the 2007 Management Proxy Circular.

AUDIT AND RISK COMMITTEE

The Committee provides oversight relating to the integrity of the Corporation's financial statements, the financial reporting process, the systems of internal accounting and financial controls, the risk identification assessment conducted by management and the programs established by management and the Board in response to such assessment, the internal audit function and the external auditors' qualifications, independence, performance, and reports. This committee met nine times in 2007. Committee chair: William D. Anderson. Members: Timothy W. Faithfull, Michael M. Kanovsky, Gordon S. Lackenbauer, and Donna Soble Kaufman (as an ex-officio member).

GOVERNANCE AND ENVIRONMENT COMMITTEE

The mandate of the Committee is to identify and recommend individuals to the Board for nomination as members of the Board and to develop and recommend to the Board a set of corporate governance principles applicable to the Corporation and to monitor compliance therewith. The Committee also provides oversight responsibilities with respect to environmental, health and safety practices, procedures and policies as established by management in relation to required legal/regulatory and industry standards or best practices. This committee met six times in 2007. Committee chair: Ambassador Gordon D. Giffin. Members: C. Kent Jespersen, Michael M. Kanovsky, Gordon S. Lackenbauer, Dr. Martha C. Piper, and Donna Soble Kaufman (as an ex-officio member).

HUMAN RESOURCES COMMITTEE

The Committee is responsible for reviewing and approving key compensation and human resource policies for the Corporation. Specifically, the committee is responsible for reviewing the Company's key human resources strategies, its equity-based and other compensation programs, and for recommending to the Board the compensation of the Corporation's executives. The committee also reviews and approves the succession management and development plan for key employees. This committee met six times in 2007. Committee chair: Stanley J. Bright. Members: Timothy W. Faithfull, C. Kent Jespersen, Dr. Martha C. Piper, Luis Vázquez Senties, and Donna Soble Kaufman (as an ex-officio member).

Climate Change and Air Emissions 53 2008 Outlook 55 Risk Management 62 Critical Accounting Policies and Estimates 65 Future Accounting Changes 66
Non-GAAP Measures

This management's discussion and analysis (MD&A) should be read in conjunction with the consolidated financial statements included in this Annual Report. The consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles (GAAP). All dollar amounts in the following discussion including the tables are in millions of Canadian dollars unless otherwise noted. This MD&A is dated Feb. 26, 2008. Additional information respecting TransAlta Corporation (TransAlta , we , our , us , or the Corporation), including its annual information form, is available on SEDAR at www.sedar.com and on our website at www.transalta.com.

Performance Metrics

We are a wholesale power generator and marketer focused on the western regions of Canada and the United States. We own, operate, and manage a highly contracted and geographically diversified portfolio of assets and have expertise in generation fuels including coal, natural gas, hydro, and renewable energy.

We have key measures that, in our opinion, are critical to meeting our goals. These measures, which include a mix of operational, risk management, and financial metrics, are discussed below.

Availability

Our plants must be available throughout the year at all times to meet demand. However, this ability to meet demand is limited by the requirement to shut down for planned maintenance and unplanned outages, and reduced production as a result of derates. Our goal is to minimize these events through regular assessments of our equipment and a comprehensive review of our maintenance plans. Over the past three years we have achieved an average availability of 88.5 per cent, which is in line with our long-term target between 90 and 92 per cent availability. Our availability in 2007 was 90.5 per cent after adjusting for derates at Centralia Thermal.

Production

Production is a significant driver of revenue in certain of our contracts and in our ability to capture market opportunities. Our goal is to optimize production through planned maintenance programs and the use of monitoring programs to minimize unplanned outages and derates. We combine these programs with our monitoring of market prices to optimize our results under both our contracts and in our merchant facilities.

For the year ended Dec. 31, 2007, production increased 2,182 GWh due to higher production at Centralia Thermal and lower planned outages and increased market demand at Sarnia partially offset by higher unplanned outages at Alberta Thermal.

Productivity

Our operations, maintenance, and administration (OM&A) costs reflect the operating cost of our facilities. These costs can fluctuate due to the timing and nature of planned maintenance activities. The remainder of OM&A costs reflect the cost of day-to-day operations. Our target is to absorb the impact of inflation in our recurring operating costs as much as possible through cost control and targeted productivity initiatives. We measure our ability to maintain productivity on OM&A based on the cost per installed megawatt-hour (MWh) of capacity which has

Edgar Filing: TRANSALTA CORP - Form 40-F

declined over the past three years.

OM&A costs have decreased over the last three years primarily due to reduced operational spending across the Generation fleet and general cost reductions, partially offset by the impact of the economic dispatch at Centralia Thermal in the second quarter of 2006, increased investment in our technological infrastructure, and higher stock compensation costs.

Safety

Safety is a top priority with all our staff, contractors and visitors. Our goal is to improve safety by 10 per cent each year and our ultimate target is for no incidents to occur.

	2005	2006	2007	Target 2008 2010
Injury Frequency Rate (IFR)	1.41	1.96	1.76	Reduce >10% annually

Sustaining Capital Expenditures

We are in a long-cycle capital-intensive business that needs consistent and stable capital expenditures.

In 2007, we spent \$293 million on routine and mine capital and \$78 million on planned maintenance. In 2006, we spent \$123 million on routine and mine capital and \$84 million on planned maintenance.

Our annual target for sustaining capital expenditures for the years 2009 and 2010 is approximately \$230 to \$260 million. In 2008, this spend is approximately \$420 to \$460 million due to equipment modifications at Centralia Thermal, investments in our mining operations, and productivity initiatives. These investments will result in improvements in reliability, heat rate, efficiency, and lower materials and labour costs. The projects are expected to pay back over the next two years. We expect to return to normal routine capital expenditure levels in 2010. We seek to reach these targets through focused planning, sound investment decisions, and solid execution against those plans.

Earnings and Cash Flow

We focus our base business on delivering strong earnings and cash flow growth. Comparable earnings per share¹ are targeted to increase in the low double-digit range per year with operating cash flows targeted between approximately \$850 and \$950 million.

2005	2006	2007	2008-2010
0.82	1.16	1.31	

Edgar Filing: TRANSALTA CORP - Form 40-F

Earnings per share (comparable basis)				Low double-digit growth
Cash from operating activities (\$ millions)	620	490	847	850-950

TRANSALTA CORPORATION Annual Report 2007

Edgar Filing: TRANSALTA CORP - Form 40-F

In 2007, earnings per share on a comparable basis increased 13 per cent to \$1.31 due to favourable pricing, higher production, and lower coal costs at Centralia Thermal, partially offset by higher unplanned outages at Alberta Thermal.

In 2006, earnings per share on a comparable basis increased to \$1.16 due to incremental production from the addition of Genesee 3 and higher pricing in Alberta and at Centralia Thermal, partially offset by lower production at Centralia Thermal, higher coal costs, and lower hydro production.

In 2007, cash flow from operating activities increased \$357 million mainly due to higher cash earnings, and receiving 12 months of contractually scheduled payments in 2007, compared to 11 in 2006.

In 2006, cash flow from operating activities decreased \$130 million due to the timing of collection of receivables amounting to \$185 million, partially offset by higher cash earnings. These accounts receivable balances in respect of November 2006 revenues were contractually scheduled to be paid, and were received, on Jan. 2, 2007. In 2005, the November contractually scheduled payments were received on Dec. 30, 2005.

Investment Ratios

Investment grade ratings support contracting activities and provide better access to capital markets through commodity and credit cycles. We are focused on maintaining a strong balance sheet and stable investment grade credit ratings. Our objective is to maintain a cash flow to interest ratio of at least 4 times, a cash flow to debt ratio of at least 25 per cent, and a debt to invested capital ratio of at most 55 per cent.

At Dec. 31, 2007, our total debt (including non-recourse debt) to invested capital was 46.8 per cent (44.2 per cent excluding non-recourse debt) compared to the Dec. 31, 2006 ratio of 44.5 per cent and Dec. 31, 2005 ratio of 43.9 per cent. Cash flow to interest increased to 6.6 times compared to 5.5 times in 2006 and 4.7 times in 2005. Cash flow to total debt increased to 30.7 per cent from 26.2 per cent in 2006 and 23.0 per cent in 2005.

	2005	2006	2007	Target 2008 2010
Cash flow to interest (times)	4.7	5.5	6.6	Minimum 4
Cash flow to total debt (%)	23.0	26.2	30.7	Minimum 25
Debt to invested capital (%)	43.9	44.5	46.8	Maximum 55

We seek to maintain financial flexibility by using multiple sources of capital to finance capital allocation plans effectively, while maintaining sufficient liquidity in our investments to support contracting and trading activities. Further, it allows our commercial teams to contract our portfolio with a variety of counterparties on terms and prices that are beneficial to our financial results.

Shareholder Value

Our business model is designed to deliver low- to moderate-risk-adjusted sustainable returns and maintain financial strength and flexibility, which enhances shareholder value in a capital intensive, long-cycle, commodity-based business. Our goal is to achieve consistent return on common shareholders equity (ROCE) 2 of greater than 10 per cent and total shareholder return (TSR) 2 of 10 per cent or more per year.

The table below shows our historical performance on these measures:

	2005	2006	2007	Target 2008	2010
ROCE (%)	7.4	2.5	9.8		>10
Comparable ROCE (%)	7.4	9.0	9.7		>10
TSR (%)	47.6	9.2	29.0		>10

Business Environment

We operate in a variety of business environments to generate electricity, find buyers for the power we generate, and arrange for its transmission. The major markets we operate in are Western Canada, the Pacific Northwest, and Eastern Canada. The key characteristics of these markets are described below.

Demand

Demand for electricity is a key fundamental driver of prices in all markets. Weather and economic growth are the key drivers of changes in demand. Demand in all three of our major markets is growing at an average rate of one to three per cent per year. Alberta has seen the highest rate of demand growth, driven by a strong economy and development of the oilsands. In the Pacific Northwest, demand has grown at a moderate but steady pace. Demand in Ontario has been relatively weak due to reduced manufacturing activity and conservation.

1 Comparable earnings is not defined under Canadian GAAP. Presenting earnings on a comparable basis from period to period provides management and investors with the ability to evaluate earnings trends more readily in comparison with prior periods' results. Refer to the Non-GAAP Measures section on page 66 of this MD&A for a further discussion of comparable earnings, including a reconciliation to net earnings.

2 These measures are not defined under Canadian GAAP. We evaluate our performance and the performance of our business segments using a variety of measures. These measures are not necessarily comparable to a similarly titled measure of another company. ROCE is a measure of the efficiency and profitability of capital investments and is calculated by taking earnings before income tax and dividing by total assets less current liabilities. Comparable ROCE measures economic value created from capital investments and is calculated by taking comparable earnings before tax and dividing by total assets less current liabilities. Presenting this calculation using comparable earnings before tax provides management and investors with the ability to evaluate trends on the returns generated in comparison with other periods. TSR is the total amount returned to investors over a specific holding period and includes capital gains and dividends and is calculated by taking the internal rate of return of all cash flows.

Supply

In all markets the cost of building new generating capacity has increased due to a shortage of component parts and increased costs of raw materials.

In Alberta, the existing thermal fleet is aging, resulting in more outages. As a result of strong growth, new generation is needed but is limited by transmission connections both within the province and to other markets. In the Pacific Northwest, sufficient supply exists in the nearer term. In Ontario, the anticipated retirement of thermal generation is placing demand on new nuclear, gas-fired, and wind sites, although transmission capacity constraints may affect how much new generation can be added.

Transmission

In simple terms, Transmission refers to the bulk delivery system of power and energy between the generating unit and the distribution system that links to wholesale and/or retail customers. Transmission lines themselves serve as the means to transport electricity from the generating unit to the individual distribution systems. Transmission systems are designed with additional capacity to allow for plants to go offline while still maintaining service to those connected to the transmission system.

Transmission Capacity refers to the ability of the transmission line, or lines, to transport this bulk supply of electricity, in an amount that balances the demand needs to the generating supply, allows for an amount of power required for system integrity and security, and for reserve capacity to respond to contingency situations on the system. In the past, adequate transmission capacity, tightly correlated to demand growth, acted as a buffer to maintaining adequate supply during this period of new generation builds. Most transmission businesses in North America are still regulated.

However, in many markets, including Alberta, investment in transmission capacity has not kept pace with growth in demand for electricity. Delays in new transmission infrastructure projects were also caused by extensive consultation processes with landowners and changing regulatory requirements. As a result, additions of generating capacity, specifically wind projects, may not have access to markets depending upon their location until transmission upgrades and additions are completed.

Environmental Legislation and Technologies

Environmental issues and related legislation have, and will continue to have, an impact upon our business. In 2007, we began to incur costs as a result of greenhouse gas (GHG) legislation in Alberta. Legislation in other jurisdictions and at different levels of government is in various stages of being drafted. Our exposure to increased costs as a result of environmental legislation is minimized in Alberta through change-in-law provisions in our Power Purchase Arrangements (PPAs).

While carbon dioxide capture and sequestration technologies are being developed, storage technologies are not sufficiently advanced. Consequently, we are expecting environmental compliance costs to increase the cost of generating electricity.

Electricity Prices

Spot electricity prices are important to our business as our merchant gas, wind, hydro, and thermal facilities are exposed to these prices. Changes in these prices will affect our profitability as well as any contracting strategy. Our

Edgar Filing: TRANSALTA CORP - Form 40-F

Alberta plants operating under PPAs pay penalties or receive payments based upon a rolling 30-day average of spot prices. Long-term contracts at Centralia Thermal, Genesee 3, Wabamun, and our contract at Sarnia minimize the impact of spot price changes.

Spot electricity prices in our markets are driven by customer demand, generator supply, and the other business environment dynamics discussed above. We monitor these trends in prices and schedule maintenance, where possible, during times of lower prices.

The average spot electricity prices in each of the past three years in our three main markets are shown in the adjacent graph.

For the year ended Dec. 31, 2007, spot prices in Alberta decreased due to unseasonably warmer weather, while prices in the Pacific Northwest and Ontario were higher compared to the same period in 2006.

Fuel Costs

Our generating facilities use either renewable fuel sources such as water, wind, and geothermal or use combustible fuels such as coal and natural gas. The costs that are incurred to supply fuel to our generating facilities affect our financial results.

Mining coal in Alberta is subject to cost increases due to increased overburden removal, inflation, and diesel commodity prices. Seasonal variations in coal mining are minimized through the application of standard costing.

We have contracted out the supply of coal and transportation at Centralia Thermal to control these costs as our existing mines could not supply coal at an economical cost.

We purchase natural gas from outside companies coincident with production or it is supplied by our customers thereby minimizing our risk to changes in prices.

We closely monitor the risks associated with changes in electricity and natural gas prices on our future operations and, where we consider it appropriate, use various physical and financial instruments to hedge our assets and operations from such price risk.

Spark Spreads

Spark spread is the difference between the market price of electricity and its cost of production, including the cost of fuel and the heat rate of the plant generating electricity. This measure is important to us as it determines our potential profit. The price of fuel is also very important as this is the main variable cost in generating electricity.

Spark spreads will also vary between different plants due to their design, the region of the world in which they operate, and the requirements of the customer and/or market the plant serves. The change in prices of electricity, natural gas, and resulting spark spreads in our three major markets affect our Generation and Energy Trading businesses.

The effect of these prices upon the margins from our generating facilities and our trading activities are described in further detail below.

Results of Operations

The results of operations are presented on a consolidated basis and by business segment. We have two business segments: Generation and Commercial Operations & Development (COD). Our segments are supported by a corporate group that provides finance, treasury, legal, regulatory, environmental health and safety, sustainable development, corporate communications, government relations, information technology, human resources, internal audit, and other administrative support.

Some of our accounting policies require management to make estimates or assumptions that in some cases may relate to matters that are inherently uncertain. Critical accounting policies and estimates include: revenue recognition, valuation and useful life of property, plant and equipment (PP&E), financial instruments, asset retirement obligations (ARO), valuation of goodwill, income taxes, and employee future benefits. See additional discussion under Critical Accounting Policies and Estimates in this MD&A.

In this MD&A, the impact of foreign exchange fluctuations on foreign currency denominated transactions and balances is discussed with the relevant income statement and balance sheet items. While individual balance sheet line items will be impacted by foreign exchange fluctuations, the net impact of the translation of individual items is reflected in the equity section of the consolidated balance sheets.

Highlights and Summary of Results

During 2007, we:

generated net earnings of \$308.8 million compared to \$44.9 million in 2006 and \$186.3 million in 2005,

generated earnings on a comparable basis¹ of \$264.3 million compared to \$233.8 million for 2006 and \$161.3 million for 2005,

generated cash flow from operations of \$847.2 million compared to \$489.6 million in 2006 and \$619.8 million in 2005, and

Edgar Filing: TRANSALTA CORP - Form 40-F

generated free cash flow² of \$111.0 million compared to \$229.9 million in 2006 and \$159.7 million in 2005.

The following table depicts key financial results and statistical operating data:

Year ended Dec. 31	2007	2006	2005
Availability (%)	87.2	89.0	89.4
Production (GWh)	50,395	48,213	51,810
Revenue	\$ 2,774.7	\$ 2,677.6	\$ 2,664.4
Gross margin ³	\$ 1,544.0	\$ 1,491.4	\$ 1,442.0
Operating income before mine closure and asset impairment charges ³	\$ 541.1	\$ 478.5	\$ 456.8
Mine closure charges		(191.9)	
Asset impairment charges		(130.0)	(36.2)
Operating income ³	\$ 541.1	\$ 156.6	\$ 420.6
Earnings from continuing operations	\$ 308.8	\$ 44.9	\$ 174.3
Earnings from discontinued operations, net of tax			12.0
Net earnings	\$ 308.8	\$ 44.9	\$ 186.3
Basic and diluted earnings per common share	\$ 1.53	\$ 0.22	\$ 0.94
Cash flow from operating activities	\$ 847.2	\$ 489.6	\$ 619.8
Cash dividends declared per share	\$ 1.00	\$ 1.00	\$ 1.00
As at Dec. 31	2007	2006	
Total assets	\$ 7,178.7	\$ 7,460.1	
Total long-term financial liabilities	\$ 2,880.7	\$ 3,094.1	

¹ Earnings on a comparable basis is not defined under Canadian GAAP. Refer to the Non-GAAP Measures section on page 66 of this MD&A for a further discussion of earnings on a comparable basis, including a reconciliation to net earnings.

² Free cash flow is not defined under Canadian GAAP. Refer to the Non-GAAP Measures section on page 66 of this MD&A for a further discussion of these items, including a reconciliation to cash flow from operating activities.

³ Gross margin, Operating income before mine closure and asset impairment charges, and Operating income are not defined under Canadian GAAP. Refer to the Non-GAAP Measures section on page 66 of this MD&A for a further discussion of these items, including a reconciliation to net earnings.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Reported Earnings

In 2007, reported earnings increased to \$308.8 million, compared to \$44.9 million in 2006 and \$186.3 million in 2005, as shown below:

Net earnings for the year ended Dec. 31, 2005	\$ 186.3
Increase in Generation gross margins before writedown of coal inventory and mark-to-market gains	49.5
Generation mark-to-market gains	35.5
Higher COD gross margins	8.8
Decrease in operations, maintenance, and administration costs	14.7
Increase in depreciation expense	(42.4)
Writedown of coal inventory to lower of cost and market (2006)	(44.4)
Centralia coal mine closure charges (2006)	(191.9)
Increase in asset impairment charges	(93.8)
Decrease in net interest expense	20.1
Increase in equity loss	(16.1)
Increase in non-controlling interests	(33.0)
Decrease in income tax expense	165.4
Earnings from discontinued operations, net of tax (2005)	(12.0)
Other	(1.8)
Net earnings for the year ended Dec. 31, 2006	\$ 44.9
Increase in Generation gross margins before mark-to-market losses	83.2
Generation mark-to-market losses	(64.4)
Writedown of coal inventory to lower of cost and market (2006)	44.4
Decrease in COD margins	(10.6)
Decrease in operations, maintenance, and administration costs	4.5
Decrease in depreciation expense	4.4
Centralia coal mine closure charges (2006)	191.9
Asset impairment charges (2006)	130.0
Gain on sale of Centralia mining equipment	15.7
Decrease in net interest expense	35.2
Increase in equity loss	(32.5)
Decrease in non-controlling interest	3.5
Decrease in income tax expense	(146.2)
Other	4.8
Net earnings for the year ended Dec. 31, 2007	\$ 308.8

Generation gross margins, before mark-to-market movements, increased by \$83.2 million for the year ended Dec. 31, 2007 as a result of lower planned outages in Western Canada combined with favourable pricing, higher production, and lower fuel costs at Centralia Thermal, partially offset by higher coal costs and higher unplanned outages in Western Canada and the strengthening of the Canadian dollar relative to the U.S. dollar. In 2006, Generation gross margins increased before the writedown of coal inventory and mark-to-market gains by \$49.5 million compared to 2005 due to incremental production from Genesee 3, favourable spark spreads and production at Poplar Creek, higher pricing and lower unplanned outages at Alberta Thermal, higher contract pricing at Centralia, increased gross margins at Sarnia, and higher trading margins. These increases were partially offset by higher unplanned outages and derates at Centralia Thermal, higher coal costs, and lower hydro production.

The majority of our electricity contracts in our Generation fleet are recorded under normal purchase/normal sale accounting or qualify for, and are recorded under, hedge accounting rules. To qualify for hedge accounting, the contract must be probable to be delivered to the customer from electricity generated from our facilities. As a result, for those contracts which we have elected hedge accounting, no gains or losses are recorded through the statement of earnings as a result of differences between the contract price and the current forecast of future prices. We do, however, record the changes in value of these contracts through the Statement of Other Comprehensive Income (OCI), but the amount of cash we receive under these contracts does not change. Upon settlement of these contracts, the difference between fair value and the contracted value is recorded in OCI and cash received.

Under hedge accounting rules we test for effectiveness at the end of each reporting period. This ensures that the amount of electricity we have contracted to supply is still likely to be provided and that the hedge provides a fixed cash flow. Where hedges are *effective*, we continue the accounting treatment described above. Where hedges are *ineffective*, that is where it is unlikely that we will have sufficient production capacity to

Edgar Filing: TRANSALTA CORP - Form 40-F

fulfill those contracts and we will be required to fulfill that contract with electricity purchased in the market, or cash flow exposure exists, these hedges, in total or in part, are considered ineffective. The ineffective portion is no longer recorded as hedges and the changes in fair value are recorded in income and no longer through OCI.

As well, there are certain contracts in our Generation fleet that at their inception do not qualify for, or we have chosen not to elect, hedge accounting. For these contracts we recognize mark-to-market gains and losses resulting from changes in forward prices compared to the price at which these contracts were transacted. These changes in price alter the timing of earnings recognition, but do not affect the final settlement amount received. The fair value of future contracts will continue to fluctuate as market prices change. Please refer to the Financial Instruments section of this MD&A for further details.

TRANSALTA CORPORATION Annual Report 2007

Edgar Filing: TRANSALTA CORP - Form 40-F

For the year ended Dec. 31, 2007, we recognized pre-tax mark-to-market losses of \$28.9 million as a result of settlement of prior year mark-to-market contracts, new contracts entered into in the year and changes in forward prices. These amounts represented an increase in mark-to-market losses of \$64.4 million for the year ending Dec. 31, 2007 compared to the same period in 2006. In 2006, we recognized mark-to-market gains of \$35.5 million as a result of certain contracts at Centralia Thermal no longer qualifying for hedge accounting and from value changes in new contracts.

For the year ended Dec. 31, 2007, COD gross margins decreased \$10.6 million compared to the same period in 2006 due to decreased gas and Eastern region trading margins in 2007 as a result of natural gas market volatility and the strengthening of the Canadian dollar relative to the U.S. dollar. In 2006, COD gross margins increased due to timing and maintenance of positions in the western region, partially offset by lower Eastern region results.

OM&A costs for the year ended Dec. 31, 2007 decreased \$4.5 million compared to the same period in 2006 primarily due to reduced operational spending across the Generation fleet, partially offset by the impact of the economic dispatch at Centralia Thermal in the second quarter of 2006, increased investment in our technological infrastructure, and higher stock compensation costs. In 2006, OM&A decreased \$14.7 million compared to 2005 due to lower planned maintenance and general cost reductions.

For the year ended Dec. 31, 2007, depreciation expense decreased \$4.4 million compared to the same period in 2006 due to the impairment recorded in 2006 on turbines held in inventory and by lower depreciation as a result of the impairment of the Centralia Gas-fired facility (Centralia Gas) recorded in 2006. In 2006, depreciation increased \$42.4 million compared to 2005 due to recording an impairment on turbines held in inventory, revised depreciation rates at the Ottawa, Mississauga, Windsor-Essex, Fort Saskatchewan, and Meridian plants, and revised ARO estimates.

In 2007, we sold equipment previously used in our Centralia mining operations and recorded a pre-tax gain of \$15.7 million.

For the year ended Dec. 31, 2007, net interest expense decreased \$35.2 million mainly due to lower long-term debt levels, higher interest income on cash deposits, and the strengthening of the Canadian dollar relative to the U.S. dollar. In 2006, net interest expense decreased \$20.1 million due to lower long-term debt levels, recognition of settlement of hedges, and the strengthening of the Canadian dollar relative to the U.S. dollar, partially offset by higher interest rates.

For the year ended Dec. 31, 2007, equity loss increased \$32.5 million compared to the same period in 2006 as a result of changes in Mexican tax laws, lower margins, and higher interest expense as a result of refinancing these subsidiaries, partially offset by the recognition of deferred financing fees in 2006. In 2006, equity loss increased \$16.1 million due to lower margins and the recognition of deferred financing fees.

For the year ended Dec. 31, 2007, non-controlling interests decreased by \$3.5 million due to lower earnings at TransAlta Cogeneration, L.P. (TA Cogen) as a result of lower margins at Sheerness and Ottawa, partially offset by higher margins at Meridian. In 2006, non-controlling interests increased by \$33.0 million due to the impairment of the Ottawa facility in 2005.

Income taxes increased compared to 2006 due to higher pre-tax earnings in 2007, lower benefits from tax rate reductions relating to prior periods, and tax recoveries on the 2006 asset impairment and mine closure charges, partially offset by the recovery from resolution of uncertain tax positions in 2007. In 2006, income taxes decreased due to the recording of applicable tax recoveries on the impairment charge at Centralia Gas as well as the costs recorded as a result of ceasing mining activities at the Centralia coal mine. Adjusting for these items, the effective tax rate for the year ended Dec. 31, 2007 was 24.2 per cent compared to 20.7 per cent in 2006, and 24.6 per cent in 2005.

Significant Events

Our consolidated financial results include the following significant events:

2007

Tax Rate Change

On Dec. 14, 2007, Bill C-28 received Royal Assent, lowering the federal corporate income tax rate to 15 per cent by 2012. These are further rate reductions from the ones included in Bill C-52, which received Royal Assent on June 22, 2007. A total of \$47.4 million of future income tax benefit was recorded in 2007.

TransAlta Power, L.P.

On Dec. 6, 2007, Stanley Power, an indirect wholly owned subsidiary of Cheung Kong Infrastructure Holdings Limited (CKI), announced that it had paid for and acquired all of the limited partnership units of TransAlta Power, L.P. (TransAlta Power) at the price of \$8.38 in cash per unit. The transaction was valued at approximately \$629 million. This transaction had no material impact on us.

Ottawa Power Purchase Agreement

On Oct. 12, 2007, we signed an agreement amending our original PPA with the Ontario Electricity Financial Corporation (OEFC) for the Ottawa Cogeneration Power Plant. The agreement was entered into to ensure continued plant operations following the expiry of long-term natural gas supply contracts. The agreement will be in effect from Nov. 1, 2007 until Dec. 31, 2012.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Mexico Tax Reform

On Oct. 1, 2007, the Mexican government enacted law replacing the existing asset tax with a new flat tax starting Jan. 1, 2008. The flat tax is a minimum tax whereby the greater of income tax or flat tax is paid. In computing the flat tax, only 50 per cent of the undepreciated tax balance of certain capital assets acquired before Sept. 1, 2007 is deductible over 10 years. In addition, no deduction or credit is permitted in respect of interest expense, and net operating losses for income taxes as at Dec. 31, 2007 cannot be carried forward to shelter flat tax. We recorded a \$28.2 million charge in equity losses as a result of this change.

Normal Course Issuer Bid (NCIB) Program

On Sept. 11, 2007, we announced an expansion of our NCIB program. We may purchase, for cancellation, up to 20.2 million of our common shares or approximately 10 per cent of the 202.0 million common shares issued and outstanding as at April 23, 2007. The 2007 NCIB program started on May 3, 2007 and will continue until May 2, 2008. Purchases will be made on the open market through the Toronto Stock Exchange (TSX) at the market price of such shares at the time of acquisition.

For the year ended Dec. 31, 2007, we purchased 2,371,800 shares at an average price \$31.59 per share. This purchase price was in excess of the weighted average book value of \$8.92 per share, resulting in a reduction to retained earnings of \$53.8 million.

Year ended Dec. 31

Total shares purchased	2,371,800
Average purchase price per share	\$ 31.59
Total cash paid	\$ 74.9
Weighted average book value of shares cancelled	21.1
Reduction to retained earnings	\$ 53.8

New Brunswick Power Purchase Agreement

On Jan. 19, 2007, we announced a 25-year contract with New Brunswick Power Distribution and Customer Service Corporation (New Brunswick Power) to provide 75 megawatts (MW) of wind power. We will construct, own, and operate a wind power facility in New Brunswick (Kent Hills). Commercial operations are expected to begin by the end of 2008.

On July 17, 2007, we amended our PPA with New Brunswick Power to increase capacity under the agreement from 75 MW to 96 MW. As a result, total capital costs for the Kent Hills wind power project will also increase to \$170 million from \$130 million. We also signed a purchase and sale agreement with Vector Wind Energy, a wholly owned subsidiary of Canadian Hydro Developers Inc., for its Fairfield Hill wind power site.

Natural Forces Technologies Inc. has an option to purchase up to 17 per cent of the Kent Hills project within 180 days of its completion.

Sundance Unit 4 Uprate

During 2007 we completed an uprate on Unit 4 of our Sundance facility that added 53 MW of capacity to this facility.

Greenhouse Gas Emissions Standards

Edgar Filing: TRANSALTA CORP - Form 40-F

Effective July 1, 2007, the *Climate Change and Emissions Management Amendment Act* was enacted into law in Alberta. Under the legislation, baselines and targets for GHG emissions intensity are set on a facility-by-facility basis. The legislation requires a 12 per cent reduction in carbon emission intensity over a baseline for the period 2003 to 2005, established as at Dec. 31, 2007. New facilities or those in operation for less than three years are exempt; however, upon the fourth year of operations, the facility baseline is established and gradually reduces by year of operation until the eighth year, by which emissions must be 12 per cent below the established baseline. Emissions over the baseline are subject to a charge that must be paid annually. The PPAs for our Alberta-based coal facilities contain change-in-law provisions that allow us to recover most compliance costs from the PPA customers. After flow-through, the net compliance costs are estimated to be approximately \$5 million per year until we are able to meet the targets for GHG emissions under the Act.

Dragline Deposit

On June 21, 2007, TransAlta Utilities Corporation, a wholly owned subsidiary, entered into an agreement with Bucyrus Canada Limited and Bucyrus International Inc. for the purchase of a dragline to be used primarily in the supply of coal for the Keephills 3 joint venture project. The total dragline purchase costs are approximately \$150 million, with final payments for goods and services due by May 2010. The total payments made under this agreement in 2007 were \$18.0 million.

Keephills 3 Power Plant

On Feb. 26, 2007, we announced that we will be building the 450 MW Keephills 3 coal-fired power plant. The plant will be developed jointly by EPCOR Utilities Inc. (EPCOR) and by us. The capital cost of the project is expected to be approximately \$1.6 billion, including associated mine capital, and is anticipated to begin commercial operations in the first quarter of 2011. We own a 50 per cent interest in this unit.

TRANSALTA CORPORATION Annual Report 2007

2006

Centralia Coal Mine

On Nov. 27, 2006, we ceased mining activities at our Centralia coal mine as a result of increased costs and unfavourable geological conditions. Inventory extracted up to the date on which we ceased operations was mostly consumed throughout 2007. Coal requirements for the foreseeable future are expected to be sourced from coal imported from the Powder River Basin (PRB). In 2007, we reduced production at the plant by approximately 2,500 gigawatt hours (GWh). The modifications to the equipment at Centralia Thermal are anticipated to be completed after the maintenance turnarounds.

We incurred an after-tax charge of \$153.6 million (\$0.76 per share) due to asset and inventory writedowns, reclamation liabilities, severance costs and other charges.

As required by GAAP, the restructuring charges appear on their appropriate lines on the Statements of Earnings. These have been summarized in the following table and are described below:

Writedown of coal inventory	\$ 44.4
Impact on gross margin	(44.4)
Mine closure charges	
Mine equipment and infrastructure writedown	\$ 72.1
ARO writedown	81.3
Severance costs and other	38.5
Total mine closure charges	191.9
Loss before income taxes	\$ (236.3)
Income tax recovery	82.7
Net loss impact of event	\$ (153.6)

Writedown of Coal Inventory

Since all coal requirements are now being sourced from an external source, the existing internally produced coal inventory was written down to fair market value, which was the current PRB cost at the time of cessation of mining activities.

Mine Equipment and Infrastructure Writedown

Mine equipment was valued at the lower of current net book value and fair value. The majority of this equipment was anticipated to be sold in 2007. Mining infrastructure, which includes processing facilities, was also written down to its expected fair values.

ARO Writedown

The unamortized cost of future reclamation expenses was recognized immediately.

Severance Costs and Other

Edgar Filing: TRANSALTA CORP - Form 40-F

This includes salaries payable to employees, estimated benefit obligations, other transition payments as a result of the closure, amounts accrued for estimated contract termination penalties, and writedown of materials and supplies. These costs were paid in 2007 for a total of \$24.2 million with the difference between this amount and the amount above of \$38.5 million due to the strengthening of the Canadian dollar relative to the U.S. dollar.

Further, since Centralia Thermal was not operating at full capacity in 2007 and 2008, certain contracts were no longer backed by physical production at the plant and therefore no longer qualified for hedge accounting. Therefore, under GAAP, we recorded these contracts at fair value and as a result of differences between market prices at that time and those of the contracts, recognized mark-to-market gains on these contracts. As well, we entered into additional contracts to offset some of this exposure and recorded these contracts at fair market value. As a result, on a net basis, based on current forward price estimates at that time, we recorded mark-to-market gains of \$35.5 million. These mark-to-market adjustments, which are not included in the table above, had no cash impact on the 2006 financial statements but the fair market value will continue to change as market prices change until settlement occurs in future periods.

Centralia Gas Impairment

During our annual impairment review, we concluded that the full book value of our Centralia Gas facility was unlikely to be recovered from future cash flows due to changes in our outlook for the plant's profitability based on market dispatch rates and trading values. As a result, we recorded an \$84.4 million after-tax (\$0.42 per share) impairment charge to write the plant down to fair value.

Notice of Preferred Securities Redemption

On Nov. 22, 2006, we announced our intention to redeem all of our 7.75 per cent Preferred Securities, which had an aggregate principal of \$175.0 million. We redeemed these securities on Jan. 2, 2007.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Designation of Eligible Dividends

Under the 2007 legislation enacted by the Department of Finance, Canadian residents are entitled to a higher gross-up and dividend tax credit in 2006 and subsequent years if they receive eligible dividends. The dividends paid by us during 2006 and 2007 are eligible dividends.

Amendment to Dividend Reinvestment and Share Purchase (DRASP) Plan

On Oct. 20, 2006, we announced that effective Jan. 1, 2007, we were amending and thereby removing the five per cent discount on the price of shares purchased through the DRASP plan and suspending the issuance of shares from treasury. Instead, shares purchased under the DRASP plan are acquired in the open market at 100 per cent of the average purchase price of common shares acquired on the TSX on the investment dates. Shares issuable under the DRASP plan have not been registered under any U.S. Federal or State Securities laws and U.S. persons or residents are not eligible to participate in the DRASP plan.

Wabamun Outage

In 2005, an oil spill at Lake Wabamun, Alberta forced us to shut down unit four of our Wabamun coal-fired plant for 39 days. In the fourth quarter of 2006, we settled a portion of our outstanding claim for lost margin and incremental expenses. The terms of the settlement are subject to a confidentiality agreement. The settlement is included in merchant revenues.

Sarnia Power Plant

On Feb. 15, 2006, we signed a five-year contract with the Ontario Power Authority (OPA) for our Sarnia Regional Cogeneration Power Plant to supply an average of 400 MW of electricity to the Ontario electricity market. The contract was effective Jan. 1, 2006.

Centralia Thermal Reduced Production and Economic Dispatch

Due to heavy rainfall in the Pacific Northwest in the first quarter of 2006, we derated Centralia Thermal and started rebuilding our coal inventory. The impact of derating the plant during this time was partially offset by increasing coal imports and purchasing replacement power. We experienced 875 GWh of lower production during the first quarter of 2006 compared to the same period of 2005.

During the second quarter of 2006, lower market prices allowed us to purchase power at a price lower than our variable cost of production. As a result, Centralia Thermal did not operate for the majority of the second quarter. We experienced 1,936 GWh of lower production during the second quarter compared to the same period of 2005.

In the third quarter of 2006, the 702 MW unit 2 experienced a turbine blade failure. As a result of the event, total production was reduced by 727 GWh. Also, in the third quarter of 2006, higher unplanned outages resulted in 232 GWh of lower production.

In the fourth quarter of 2006, 358 GWh of production at Centralia Thermal was lost as a result of PRB coal test burns at the plant.

For the year ended Dec. 31, 2006, as a result of the above-mentioned events, total production at Centralia was 4,128 GWh lower than in 2005.

Purchase of Wailuku River Hydroelectric L.P.

On Feb. 17, 2006, we purchased a 50 per cent interest in Wailuku River Hydroelectric L.P. through Wailuku Holding Company, LLC (Wailuku) for cash of U.S.\$1.0 million (CDN\$1.2 million). Wailuku had debt of U.S.\$19.2 million (CDN\$22.3 million) at the time of acquisition. Wailuku owns a run-of-river hydro facility with an operating capacity of 10 MW. MidAmerican Energy Holdings Company (MidAmerican) owns the other 50 per cent interest in Wailuku.

Change in Depreciation Rate

In the first quarter of 2006, we changed the depreciation method of the Windsor-Essex, Mississauga, Ottawa, Meridian, and Fort Saskatchewan plants. Previously, these plants were amortized on a unit-of-production method over the life of the plants. After reviewing the estimated useful life and considering the uncertainty for the plants' operations beyond the terms of the current sales contracts, we determined that it was more reasonable to allocate the remaining net book value of the plants on a straight-line basis over the remaining term of the respective contracts. This increase in depreciation is offset by a reduction in earnings attributable to the non-controlling interests in our consolidated statement of earnings.

Keephills 3 Project

On March 14, 2006, we signed a development agreement with EPCOR Utilities Inc. (EPCOR) to jointly examine the development of the Keephills 3 power project, a proposed 450 MW supercritical coal-fired plant adjacent to our existing Keephills facility.

2006 Federal and Alberta Budgets

On May 24, 2006, the Alberta budget received Royal Assent. As a result, the general corporate income tax rate for Alberta was reduced from 11.5 per cent to 10 per cent effective April 1, 2006. The federal budget received Royal Assent on June 22, 2006. As a result, the general corporate federal tax rate is to be reduced from 21 per cent to 19 per cent by Jan. 1, 2010. The corporate surtax was eliminated for taxation years ended after Dec. 31, 2007 and the federal capital tax has been eliminated effective Jan. 1, 2006. The carry-forward period for non-capital losses and investment tax credits earned after 2005 was extended from 10 to 20 years. As a result of these changes, we reduced income tax expense by \$55.3 million.

2005

Commissioning of Genesee 3

On March 1, 2005, we, jointly with EPCOR, commissioned the Genesee 3 coal-fired facility. We own a 50 per cent interest in this unit.

Wabamun Outage

On Aug. 3, 2005, a CN Rail train derailment resulted in an oil spill in Lake Wabamun, Alberta. We were forced to shut down unit four of our Wabamun coal plant as a result. The facility was restored to full operations on Sept. 11, 2005.

Impairment of the Ottawa Facility

In the fourth quarter of 2005, after completing our impairment reviews, we concluded that the carrying value of the Ottawa cogeneration facility exceeded its fair value in the accounts of TA Cogen, a majority-owned subsidiary. Consequently, TA Cogen recorded an impairment provision of \$78.3 million in the fourth quarter of 2005. However, in our accounts, the carrying value of the Ottawa facility is lower than that of TA Cogen. TA Cogen purchased this facility from us at a price that was higher than what we paid to construct it. We recognized a \$36.2 million charge to reflect the difference in carrying values between our accounts and those of TA Cogen. This charge was offset by a reduction in the earnings attributable to the non-controlling interests in our consolidated statement of earnings. The net result is that the impairment of the plant in the accounts of TA Cogen had no impact on our net earnings.

Subsequent Events

Mexico Business

On Feb. 20, 2008, we announced the sale of our Mexican operations to InterGen Global Ventures B.V. (InterGen) for U.S.\$303.5 million. The transaction is subject to regulatory approvals in Mexico and is expected to close by the end of the second quarter of 2008. We will record a charge to the first quarter earnings of approximately \$55 \$65 million to reflect the difference between the book value and sale price of these assets.

Blue Trail Wind Power Project

On Feb. 13, 2008, we announced plans to design, build, and operate Blue Trail, a 66 MW wind power project in southern Alberta. The capital cost of the project is estimated at \$115 million. Commercial operations are expected to commence in the fourth quarter of 2009.

Dividend Increase

On Jan. 31, 2008, our Board of Directors approved an increase to the annual dividend from \$1.00 to \$1.08 per share. Our Board also declared a quarterly dividend of \$0.27 per share on common shares, payable April 1, 2008 to shareholders of record at the close of business March 1, 2008.

Greenhouse Gas Emissions

Edgar Filing: TRANSALTA CORP - Form 40-F

On Jan. 24, 2008, the Government of Alberta announced its intention to cut greenhouse gas emissions to 14 per cent below 2005 levels by 2050 through developing and implementing carbon capture and storage technologies, developing conservation and energy efficiency programs, and through increased investment in clean energy technologies. The first stage of this program is to create focus groups or task forces for each of these three areas and develop action plans. We are assessing the impact of this proposal upon our operations and our own investment in environmental technologies and programs. The PPAs for our Alberta-based coal facilities contain change-in-law provisions that allow us to recover compliance costs from the PPA customers.

Discussion of Segmented Results

GENERATION Owns and operates hydro, wind, geothermal, gas- and coal-fired plants, and related mining operations in Canada, the U.S., and Australia. Generation's revenues are derived from the availability and production of electricity and steam as well as ancillary services such as system support. At Dec. 31, 2007, Generation had 8,431 MW of gross generating capacity¹ in operation (8,024 MW net ownership interest) and 387 MW net under construction. For a full listing of all of our generating assets and the regions in which they operate, refer to page 26 of this annual report.

During 2007, we completed an uprate on Unit 4 of our Sundance facility that added 53 MW of generating capacity. As well, during 2007 we increased the measured gross generating capacity of Sheerness by 5 MW (2.5 MW net of ownership interest) and Power Resources by 12 MW (6 MW net of ownership interest).

We have strategic alliances with EPCOR, ENMAX Corporation (ENMAX), and MidAmerican. The EPCOR alliance provided the opportunity for us to acquire a 50 per cent ownership in the 450 MW Genesee 3 project to build the Keepphills 3 project. ENMAX and our Company each own 50 per cent of the partnership in the McBride Lake wind project. MidAmerican owns the other 50 per cent interest in CE Generation, LLC (CE Gen) and Wailuku.

Our results are seasonal due to the nature of the electricity market and related fuel costs. Higher maintenance costs are ordinarily incurred in the second and third quarters when electricity prices are expected to be lower, as electricity prices generally increase in the winter months in the Canadian market. Margins are also typically impacted in the second quarter due to the volume of hydro production resulting from spring runoff and rainfall in the Canadian and U.S. markets.

¹ We measure capacity as net maximum capacity (see glossary for definition of this and other key items), which is consistent with industry standards. Capacity figures represent capacity owned and in operation unless otherwise stated.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Edgar Filing: TRANSALTA CORP - Form 40-F

The results of the Generation segment are as follows:

Year ended Dec. 31	2007		2006		2005	
	Total	Per installed MWh2	Total	Per installed MWh2	Total	Per installed MWh2
Revenues	\$ 2,719.6	\$ 37.03	\$ 2,611.9	\$ 35.64	\$ 2,607.5	\$ 37.50
Fuel and purchased power	(1,230.7)	(16.76)	(1,186.2)	(16.19)	(1,222.4)	(17.58)
Gross margin	1,488.9	20.27	1,425.7	19.45	1,385.1	19.92
Operations, maintenance and administration	446.9	6.08	458.3	6.25	481.1	6.92
Depreciation and amortization	391.3	5.33	396.9	5.42	354.9	5.10
Taxes, other than income taxes	19.9	0.27	21.1	0.29	21.3	0.31
Intersegment cost allocation	27.3	0.37	27.8	0.38	26.0	0.37
Operating expenses	885.4	12.05	904.1	12.34	883.3	12.70
Operating income before mine closure and asset impairment charges 1	603.5	8.22	521.6	7.11	501.8	7.22
Mine closure charges			191.9	2.62		
Asset impairment charges			130.0	1.77	36.2	0.52
Operating income	\$ 603.5	\$ 8.22	\$ 199.7	\$ 2.72	\$ 465.6	\$ 6.70
Installed capacity (GWh)	73,447		73,287		69,528	
Production (GWh)	50,395		48,213		51,810	
Availability (%)	87.2		89.0		89.4	

Availability

Availability for the year ended Dec. 31, 2007 decreased to 87.2 per cent from 89.0 per cent compared to the same period in 2006 primarily as a result of derating at Centralia Thermal due to test burning PRB coal in 2007 and higher unplanned outages in Western Canada. The underlying availability after adjusting for Centralia Thermal derates is 90.5 per cent for the year ended Dec. 31, 2007.

In 2006, availability was slightly lower than 2005 due to higher unplanned outages and derates at Centralia Thermal, mostly offset by lower planned outages in Western Canada and lower planned and unplanned outages in Eastern Canada.

Generation Production and Gross Margins

Generation's production volumes, electricity and steam production revenues, and fuel and purchased power costs are presented below, based on geographical regions.

Year ended	Production	Installed	Revenue	Fuel & purchased power	Gross margin	Revenue per installed	Fuel & purchased power per installed	Gross margin per installed
Dec. 31, 2007	(GWh)	(GWh)				MWh	MWh	MWh
Western Canada	33,398	45,385	\$ 1,302.1	\$ 449.4	\$ 852.7	\$ 28.69	\$ 9.90	\$ 18.79
Eastern Canada	3,775	7,173	442.9	302.6	140.3	61.75	42.19	19.56
International	13,222	20,889	974.6	478.7	495.9	46.66	22.92	23.74
	50,395	73,447	\$ 2,719.6	\$ 1,230.7	\$ 1,488.9	\$ 37.03	\$ 16.76	\$ 20.27

Year ended	Production	Installed	Revenue	Fuel & purchased power	Gross margin	Revenue per installed	Fuel & purchased power per installed	Gross margin per installed

International	15,269	20,656	946.6	466.9	479.7	45.83	22.60	23.22
	51,810	69,528	\$ 2,607.5	\$ 1,222.4	\$ 1,385.1	\$ 37.50	\$ 17.58	\$ 19.92

- 1 *Operating income before mine closure and asset impairment charges is not defined under Canadian GAAP. Refer to the Non-GAAP Measures section on page 66 of this MD&A for a further discussion of these items, including a reconciliation to cash flow from operating activities.*
- 2 *We have traditionally presented gross margins and other key elements of the income statement on a per MWh produced. While for specific types of contracts this is an effective measure of profitability between periods, levels of production and associated revenues and costs are not comparable across all plants within the Generation segment. To better gauge overall fleet performance and return on the investment in assets, we have presented overall results on an installed MWh basis, which is a measure of overall fleet capacity.*

TRANSALTA CORPORATION Annual Report 2007

Western Canada

Our Western Canada assets consist of five coal facilities, three gas-fired facilities, thirteen hydro facilities, and three wind farms with a total gross generating capacity of 5,222 MW (4,937 MW net of ownership interest). We are currently constructing a 450 MW (225 MW net of ownership interest) merchant thermal plant at our Keephills facility under a joint venture with EPCOR. The additional unit at our Keephills facility is scheduled to enter commercial production in 2011.

Our Sundance, Keephills, and Sheerness plants and hydro facilities operate under PPAs with a gross generating capacity of 4,030 MW (3,835 MW net of ownership interest). Under the PPAs, we earn monthly capacity revenues, which are designed to recover fixed costs and provide a return on capital for our plants and mines. We also earn energy payments for the recovery of predetermined variable costs of producing energy, an incentive/penalty for achieving above/below the targeted availability, and an excess energy payment for power production above committed capacity. Additional capacity added to these units that is not included in capacity covered by the PPAs is sold on the merchant market.

Our Wabamun, Genesee 3, Summerview, and a portion of our Poplar Creek facilities sell their production on the merchant spot market. In order to manage our exposure to changes in spot electricity prices as well as capture value, we contract a portion of this production to guarantee cash flows.

Due to their close physical proximity, three of our coal units, Sundance, Keephills, and Wabamun, are operated and managed collectively and are referred to as Alberta Thermal.

Our Castle River, McBride Lake, Meridian, Fort Saskatchewan, and a significant portion of our Poplar Creek assets earn revenues under long-term contracts for which revenues are derived from payments for capacity and/or the production of electrical energy and steam as well as for ancillary services. These contracts are for an original term of at least ten years and payments do not fluctuate significantly with changes in levels of production.

For the year ended Dec. 31, 2007, production decreased 103 GWh compared to 2006 due to higher unplanned outages at Alberta Thermal, partially offset by increased customer demand at Fort Saskatchewan, increased hydro production, and lower planned outages at Alberta Thermal.

In 2006, production increased 470 GWh compared to 2005 due to lower planned and unplanned outages at Alberta Thermal, increased production from Genesee 3, Poplar Creek, and Alberta Thermal, partially offset by lower PPA customer demand.

Gross margin for the year ended Dec. 31, 2007 decreased \$36.0 million (\$0.86 per installed MWh) compared to the same period in 2006 due to higher coal costs, higher unplanned outages at Alberta Thermal, and lower prices, partially offset by lower planned outages at Alberta Thermal and higher excess energy due to the uprate on Unit 4 of our Sundance facility.

In 2006, gross margin increased \$72.2 million (\$0.56 per installed MWh) compared to 2005 due to higher prices and increased production at various facilities, partially offset by lower hydro production and higher coal costs.

Eastern Canada

Edgar Filing: TRANSALTA CORP - Form 40-F

Our Eastern Canada assets consist of four gas-fired facilities with a total gross generating capacity of 819 MW (697 MW net of ownership interest). All four facilities earn revenue under long-term contracts for which revenues are derived from payments for capacity and/or the production of electrical energy and steam. Kent Hills, a 96 MW wind farm located in New Brunswick, is currently under development and is scheduled to begin commercial operations late in 2008.

Production for the year ended Dec. 31, 2007 increased 422 GWh primarily resulting from favourable market conditions, higher customer demand and lower planned maintenance at Sarnia and increased production at Ottawa due to gas sales in the first quarter of 2006.

Production for the year ended Dec. 31, 2006 decreased 157 GWh primarily due to lower production at Ottawa and lower customer demand and higher planned maintenance at Sarnia.

For the year ended Dec. 31, 2007, gross margins decreased \$12.9 million (\$1.80 per installed MWh) mainly as a result of lower gas sales at Ottawa.

For the year ended Dec. 31, 2006, gross margins increased \$64.3 million (\$6.80 per installed MWh) primarily due to gas sales at Ottawa and incremental revenue at Sarnia.

International

Our international assets consist of gas, coal, hydro, and geothermal assets in various locations in the United States with a generating capacity of 2,090 MW and gas- and diesel-fired assets in Australia with a generating capacity of 300 MW. 385 MW of our United States assets are operated by CE Gen, a joint venture owned 50 per cent by us.

Our Centralia Thermal, Centralia Gas, Power Resources, Skookumchuck, and one unit of our Imperial Valley assets are merchant facilities. To reduce the volatility and risk in merchant markets, we use a variety of physical and financial hedges to secure prices received for electrical production. The remainder of our international facilities operate under long-term contracts.

For the year ended Dec. 31, 2007, production increased 1,863 GWh due to lower unplanned outages combined with higher production at Centralia Thermal due to the facility being economically dispatched in the second quarter of 2006, partially offset by lower production at Centralia Gas.

For the year ended Dec. 31, 2006, production decreased 3,910 GWh due to higher unplanned outages, economic dispatch, and derates at Centralia Thermal.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Edgar Filing: TRANSALTA CORP - Form 40-F

For the year ended Dec. 31, 2007, gross margins increased \$112.1 million (\$5.35 per installed MWh) due to favourable market and contractual pricing and increased production at Centralia Thermal, the writedown of inventory related to the cessation of mining activities of the Centralia coal mine in 2006, and lower coal costs at Centralia Thermal, partially offset by mark-to-market losses in 2007 versus mark-to-market gains in 2006 and the strengthening of the Canadian dollar compared to the U.S. dollar.

For the year ended Dec. 31, 2006, gross margins decreased \$95.9 million (\$4.83 per installed MWh) due to reduced production at Centralia Thermal, higher coal costs, and the writedown of internally produced inventory to the lower of cost and market, partially offset by mark-to-market gains.

Operations, Maintenance, and Administration

For the year ended Dec. 31, 2007, OM&A expense decreased by \$11.4 million primarily due to lower operational spending and planned maintenance expenditures, partially offset by savings realized from the economic dispatch at Centralia Thermal in the second quarter of 2006.

In 2006, OM&A expenses decreased \$22.8 million from 2005 due to lower planned outages, general cost reductions, and from the economic dispatch at Centralia Thermal.

Planned Maintenance

The table below shows the amount of planned maintenance capitalized and expensed, excluding CE Gen:

Year ended Dec. 31	2007		2006		2005	
Capitalized	\$	78.0	\$	84.2	\$	119.1
Expensed		54.0		55.4		68.3
	\$	132.0	\$	139.6	\$	187.4
GWh lost		2,056		2,325		2,818

Production lost in the year ended Dec. 31, 2007, decreased by 269 GWh from 2006 due to reduced planned outages across the fleet. In 2006, production lost decreased by 493 GWh for the same reason.

For the year ended Dec. 31, 2007, total capital and expensed maintenance costs decreased compared to the same period in 2006 primarily due to lower planned maintenance activity at our gas-fired facilities. During the year ended Dec. 31, 2006, capitalized and expensed maintenance costs were lower compared to the same period in 2005 due to the benefits from multi-year maintenance plans.

Depreciation Expense

For the year ended Dec. 31, 2007, depreciation expense decreased \$5.6 million compared to 2006 due to the impairment recorded in 2006 on turbines held in inventory, lower depreciation at Centralia Gas, and the strengthening of the Canadian dollar versus the U.S. dollar, partially offset by the recording of ARO accretion at the Centralia coal mine, increased depreciation as a result of capital spending in 2006, and reduced life of certain parts at Centralia Thermal.

Edgar Filing: TRANSALTA CORP - Form 40-F

For active mines, accretion expense related to ARO is included in cost of sales. However, the Centralia coal mine is currently considered to be inactive and therefore, accretion expense is now recorded in depreciation expense. Accretion expense of \$8.7 million and \$8.2 million related to the Centralia coal mine was recorded in cost of sales, respectively, for the years ended Dec. 31, 2006 and Dec. 31, 2005.

Depreciation and amortization increased \$42.0 million in 2006 compared to 2005 primarily due to the change in depreciation rates at the Windsor-Essex, Mississauga, Ottawa, Meridian, and Fort Saskatchewan plants, revised ARO estimates at Alberta Thermal, and the impairment recorded on turbines held in inventory. The change in depreciation rates at the above-mentioned plants resulted in an increase in depreciation expense that was offset by a decrease in non-controlling interests.

COMMERCIAL OPERATIONS & DEVELOPMENT (COD) *derives revenue and earnings from the wholesale trading of electricity and other energy-related commodities and derivatives. Achieving gross margins while remaining within value at risk (VAR) limits is a key measure of COD s trading activities.*

COD is responsible for the management of commercial activities for our current generating assets. COD also manages available generating capacity as well as the fuel and transmission needs of the Generation business by utilizing contracts of various durations for the forward sales of electricity and for the purchase of natural gas, coal, and transmission capacity. Further, COD is responsible for developing or acquiring new cogeneration, wind, geothermal, and hydro generating assets and making portfolio optimization decisions. The results of all of these activities are included in the Generation segment.

Our trading activities utilize a variety of instruments to manage risk, earn trading revenue, and gain market information. Our trading strategies consist of shorter-term physical and financial trades in regions where we have assets and the markets that interconnect with those regions. The portfolio primarily consists of physical and financial derivative instruments including forwards, swaps, futures, and options in various commodities. These contracts meet the definition of trading activities and have been accounted for at fair value under Canadian GAAP. Changes in the fair value of the portfolio are recognized in income in the period they occur.

While trading products are generally consistent between periods, positions held and resulting earnings impacts will vary due to current and forecasted external market conditions. Positions for each region are established based on the market conditions and the risk/reward ratio established for each trade at the time they are transacted. Results, therefore, will vary regionally or by strategy from one reported period to the next.

A portion of OM&A costs incurred within COD is allocated to the Generation segment based on an estimate of operating expenses and an estimated percentage of resources dedicated to providing support and analysis. This fixed fee intersegment allocation is represented as a cost recovery in COD and an operating expense within Generation.

TRANSALTA CORPORATION Annual Report 2007

Edgar Filing: TRANSALTA CORP - Form 40-F

Previously, we recorded revenues and related costs for contracts settled in real-time physical markets on a gross basis. However, all of these contracts are held for trading, irrespective of the market in which they are settled. Therefore, we have concluded that it is more representative of the actual trading activities of COD to report the results of these contracts on a net basis.

Prior year balances have been reclassified to conform with the current year's presentation, as shown below. Current year balances have been prepared in the following table using previously disclosed methodologies for information purposes only.

Year ended Dec. 31		2007		2006		2005
Revenue	\$	272.9	\$	184.6	\$	231.0
Trading purchases		(217.8)		(118.9)		(174.1)
Net revenue	\$	55.1	\$	65.7	\$	56.9

The results of the COD segment, with all trading results presented net, are as follows:

Year ended Dec. 31		2007		2006		2005
Gross margin	\$	55.1	\$	65.7	\$	56.9
Operations, maintenance and administration		33.7		36.9		38.5
Depreciation and amortization		1.4		1.3		1.7
Intersegment cost allocation		(27.3)		(27.8)		(26.0)
Operating expenses		7.8		10.4		14.2
Operating income	\$	47.3	\$	55.3	\$	42.7

For the year ended Dec. 31, 2007, gross margins decreased \$10.6 million compared to the same period in 2006 due to decreased gas and Eastern region trading margins as a result of natural gas market volatility and the strengthening of the Canadian dollar relative to the U.S. dollar.

For the year ended Dec. 31, 2006, gross margins increased \$8.8 million due to timing and management of positions in the western region, partially offset by lower margins in the Eastern region.

OM&A costs for 2007 decreased \$3.2 million due to lower incentive costs as a result of decreased margins as well as lower project consulting expenses.

For the year ended Dec. 31, 2006, OM&A costs decreased \$1.6 million compared to the same period in 2005 due to lower consulting costs, partially offset by increased trading staff levels.

The intersegment cost allocations are consistent with prior comparable periods.

Value at Risk and Trading Positions

VAR is the most commonly used metric employed to track the risk of trading positions. A VAR measure gives, for a specific confidence level, an estimated maximum loss over a specified period of time.

VAR is the primary measure used to manage COD's exposure to market risk resulting from trading activities. VAR is monitored on a daily basis, and is used to determine the potential change in the value of our marketing portfolio over a three-day period within a 95 per cent confidence level resulting from normal market fluctuations. Stress tests are performed weekly on both earnings and VAR to measure the potential effects of various market events that could impact financial results, including fluctuations in market prices, volatilities of those prices, and the relationships between those prices.

We estimate VAR using the historical variance/covariance approach. Currently, there is no uniform energy industry methodology for estimating VAR. An inherent limitation of historical variance/covariance VAR is that historical information used in the estimate may not be indicative of future market risk. See additional discussion under commodity price risk in the Risk Management section.

Net Interest Expense

Year ended Dec. 31	2007	2006	2005
Interest on long-term debt	\$ 144.7	\$ 155.5	\$ 169.3
Interest on short-term debt	26.3	12.7	14.9
Interest on preferred securities		13.6	16.5
Interest income	(31.7)	(13.3)	(8.7)
Capitalized interest	(6.0)		(3.4)
Net interest expense	\$ 133.3	\$ 168.5	\$ 188.6

For the year ended Dec. 31, 2007, net interest expense decreased \$35.2 million compared to the same period in 2006 due to lower long-term debt balances, the strengthening of the Canadian dollar relative to the U.S. dollar, the redemption of preferred securities, higher interest on cash deposits, and interest capitalized related to assets under construction, partially offset by higher short-term debt balances and gains recorded on financial instruments in 2006.

For the year ended Dec. 31, 2006, net interest expense decreased \$20.1 million due to lower long-term debt balances, higher interest on cash balances, and the strengthening of the Canadian dollar to the U.S. dollar, partially offset by the recognition of gains on financial instruments in 2005.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Gain on Sale of Assets

As a result of the decision to cease mining activities at the Centralia coal mine, all associated mining and reclamation equipment was classified as being held for sale. All equipment was recorded at the lower of net book value or anticipated realized proceeds. These assets are included in the Generation segment.

During 2007, some of this equipment has been retained for reclamation activities and some was transferred to the Highvale mine for use in production of coal inventory. The equipment retained has been reclassified to property, plant, and equipment. The decision to retain equipment for use in reclamation activities at the Centralia coal mine and in operations at the Highvale mine was arrived at as the economics of retaining these assets was greater than the potential cash proceeds from disposing of these assets.

In 2006 we sold excess turbines in inventory for net proceeds of \$20.3 million, which equaled their net book value.

Non Controlling Interests

We own 50.01 per cent of TA Cogen, which owns, operates, or has an interest in five gas-fired and one coal-fired generating facility with a total gross generating capacity of 814 MW. A private investor owns the minority interest in TA Cogen. Since we own a controlling interest in TA Cogen, under Canadian GAAP, we consolidate the entire earnings, assets, and liabilities in relation to TA Cogen's ownership of those assets. Non-controlling interests on the income statement and balance sheet relate to the earnings and net assets attributable to TA Cogen that are not owned by us. On the statement of cash flow, cash paid to the minority shareholder of TA Cogen is shown as Distributions to subsidiaries non-controlling interests in the financing section.

For the year ended Dec. 31, 2007, earnings attributable to non-controlling interests decreased \$3.5 million due to lower margins at Sheerness and Ottawa, partially offset by higher margins at Meridian.

In 2006, non-controlling interests increased \$33.0 million from the same period in 2005 due to the impairment recorded on TA Cogen's value in the Ottawa facility. Excluding the impairment charge, non-controlling interests decreased \$3.2 million compared to the same period in 2005 due to higher earnings at TA Cogen in 2005.

Equity Loss

As required under Accounting Guideline 15, Consolidation of Variable Interest Entities, of the Canadian Institute of Chartered Accountants (CICA), our Mexican operations are accounted for as equity subsidiaries. However, these plants are owned by us and managed as part of the Generation segment.

The table below summarizes key information from these operations.

Edgar Filing: TRANSALTA CORP - Form 40-F

Year ended Dec. 31		2007		2006		2005
Availability (%)		92.7		90.8		93.4
Production (GWh)		3,084		2,918		2,751
Equity loss	\$	(49.5)	\$	(17.0)	\$	(0.9)
Capital expenditures	\$	1.0	\$	10.0	\$	13.1
Operating cash flow	\$	(3.3)	\$	(7.2)	\$	9.2
Interest expense	\$	27.4	\$	31.6	\$	14.4
As at Dec. 31				2007		2006
Total assets			\$	450.5	\$	526.9
Total liabilities			\$	368.7	\$	404.1

For the year ended Dec. 31, 2007, availability increased primarily due to lower planned outages at Campeche and Chihuahua and unplanned outages at Chihuahua. Availability decreased for the year ended Dec. 31, 2006 compared to the same period in 2005 as a result of higher planned outages at the Chihuahua plant.

For the year ended Dec. 31, 2007, production increased 166 GWh due to higher customer demand at Chihuahua and lower planned outages at Campeche and Chihuahua.

In 2006, production increased 167 GWh compared to 2005 due to increased customer demand, partially offset by higher planned and unplanned outages.

TRANSALTA CORPORATION Annual Report 2007

As described in the **Significant Events** section of this MD&A, on Oct. 1, 2007, the Mexican government enacted law introducing a flat tax system starting Jan. 1, 2008 and, as a result, we have recorded a \$28.2 million charge to equity losses and a corresponding reduction in investments reflecting the expected impact of this change in law.

For the year ended Dec. 31, 2007, equity loss increased \$32.5 million due to the income tax expense described above, lower margins, and increased interest costs as a result of refinancing these subsidiaries in 2006, partially offset by the recognition of deferred financing fees and the loss incurred on unwinding a cross-currency swap in 2006 related to the refinancing.

For the year ended Dec. 31, 2006, equity loss increased \$16.1 million compared to 2005 due to recognition of the deferred financing fees resulting from the repayment of non-recourse debt and settlement of interest rate swaps.

We have initiated a strategic review of our Mexican operations and process to identify potential buyers for these assets. On Feb. 20, 2008, we announced the sale of our Mexican operations to InterGen for U.S.\$303.5 million. Refer to the **Subsequent Events** section in this MD&A for further details.

Income Taxes

Income tax expense under GAAP is based on the earnings of the period, the jurisdiction in which the income is earned, and if there are any differences between how pre-tax income is calculated under GAAP versus income tax law. Income tax rates and amounts differ based upon these factors. When calculating income tax expense, if there is a difference from when an expense or revenue is recognized under either accounting or income tax rules, we make an estimate of when in the future this difference will no longer be in effect and the anticipated income tax rate at that time. These items are deductible or taxable temporary differences. We base these tax rates upon the rates the government expects to be in effect when these temporary differences reverse.

Therefore, when a government announces a change in future income tax rates, it will affect the anticipated income tax asset or liability that will appear in our financial statements. We have seen several large reductions in future tax expense as a result of the Canadian government reducing future tax rates.

A reconciliation of income tax expense and effective tax rates is presented below:

Year ended Dec. 31	2007	2006	2005
Earnings (loss) before income taxes ¹	\$ 329.2	\$ (80.9)	\$ 213.9
Adjustments:			
Coal inventory writedown		44.4	
Mine closure charges		191.9	
Asset impairment charges		130.0	
Turbine impairment		9.6	
Change in tax law in Mexico	28.2		
Earnings before income taxes and other adjustments ¹	\$ 357.4	\$ 295.0	\$ 213.9
Income tax prior to adjustment for rate change ¹	86.5	61.2	52.6
Income tax recovery on one time adjustments		(131.7)	
Income tax recovery from settlement of tax positions	(18.4)		(13.0)

Edgar Filing: TRANSALTA CORP - Form 40-F

Change in tax rate related to prior periods		(47.7)		(55.3)	
Income tax expense (recovery) per financial statements	\$	20.4	\$	(125.8)	\$ 39.6
Net income	\$	308.8	\$	44.9	\$ 174.3
Effective tax rate (%) ²		24.2		20.7	24.6

During 2007, we settled certain taxation issues with the associated taxation authorities. As a result, we recorded a future income tax recovery of \$18.4 million related to these items.

As a result of a reduction in Canadian corporate income tax rates expected to apply to future tax liabilities, income tax expense was reduced by \$47.7 million for year ended Dec. 31, 2007. The comparable figure for the year ended Dec. 31, 2006 was \$55.3 million.

Adjusting for the items mentioned above, tax expense increased for the year ended Dec. 31, 2007 from the same period in 2006 due to an increase in pre-tax income earnings and the effect of the change in mix of jurisdictions in which pre-tax income is earned.

- 1 *Earnings before income taxes and other adjustments, and income tax prior to adjustment for rate changes, are not defined under Canadian GAAP. Refer to the Non-GAAP Measures section on page 66 of this MD&A for a further discussion of this item, including a reconciliation to net earnings.*
- 2 *Effective tax rate is defined as income taxes prior to adjustment for rate change, divided by earnings before income taxes and other adjustments.*

MANAGEMENT'S DISCUSSION AND ANALYSIS

Financial Position

The following chart outlines significant changes in the consolidated balance sheet from Dec. 31, 2006 to Dec. 31, 2007:

	Increase/ (decrease)	Explanation of change
Cash and cash equivalents	\$ (14.7)	Refer to Consolidated Statements of Cash Flows
Accounts receivable	(71.9)	Timing of receipt of contractually scheduled payments
Inventory	(22.9)	Lower inventory balances at Centralia Thermal
Restricted cash	(105.4)	Decrease in exchange rates of \$48.6 and return of funds to TransAlta of \$56.8
Investments	(29.9)	Net loss and debt repayments by equity subsidiaries
Long-term receivables	(26.6)	Revised estimate and reclassification of the current portion to accounts receivable
Risk management assets (current and long-term)	77.9	Adopting new accounting standards on financial instruments and from price changes
Property, plant and equipment, net	75.4	Capital additions, partially offset by the strengthening of the Canadian dollar compared to the U.S. dollar and depreciation expense
Goodwill	(12.6)	Strengthening of the Canadian dollar compared to the U.S. dollar
Assets held for sale, net	(80.7)	Assets retained for use in reclamation activities and for use in operations at the Highvale mine combined with sale of other assets
Intangible assets	(82.9)	Amortization expense and the strengthening of the Canadian dollar
Short-term debt	288.9	Net increase in short-term debt
Accounts payable and accrued liabilities	30.2	Timing of operational payments and the strengthening of the Canadian dollar
Recourse long-term debt (including current portion)	(268.8)	Scheduled debt payments and strengthening of the Canadian dollar compared to the U.S. dollar
Non-recourse long-term debt (including current portion)	(92.7)	Scheduled debt payments and strengthening of the Canadian dollar compared to the U.S. dollar
Risk management liabilities (current and long-term)	262.9	Result of adopting new accounting standards on financial instruments and from price changes
Deferred credits and other long-term liabilities (including current portion)	(81.8)	Normal accretion expense less liabilities settled, payment of Centralia coal mine closure costs, and revised ARO estimate
Net future income tax liabilities (including current portions)	(92.7)	Tax effect of adjustments related to new accounting standards on financial instruments and current year provisions
Non-controlling interests	(38.6)	Distributions in excess of earnings
Preferred securities (including current portion)	(175.0)	Preferred securities redeemed in the first quarter of 2007

Edgar Filing: TRANSALTA CORP - Form 40-F

Shareholders' equity

(129.4)

Adoption of new accounting standards, shares redeemed under the NCIB, and dividends declared, partially offset by net earnings and shares issued

TRANSALTA CORPORATION Annual Report 2007

44

Financial Instruments

On Jan. 1, 2007, we adopted four new accounting standards that were issued by the CICA: Section 1530, *Comprehensive Income*; Section 3855, *Financial Instruments - Recognition and Measurement*; Section 3861, *Financial Instruments - Disclosure and Presentation*; and Section 3865, *Hedges*. We adopted these standards retroactively with an adjustment of opening accumulated other comprehensive income (AOCI).

The adoption of these new standards require us to fair value virtually all of our financial instruments, even in situations where hedge accounting is permitted. Prior to the adoption of these standards, only financial instruments where we were not permitted or did not elect to use hedge accounting were recorded at their fair values with changes in those values flowing directly through earnings.

The table below summarizes the current and prior accounting treatment of our financial instruments:

	Previous accounting treatment	Current accounting treatment
Energy trading contracts	Fair value with changes in value recorded in earnings	Fair value with changes in value recorded in earnings
Electricity supply contracts	Settlement accounting	Settlement accounting
Commodity-based contracts	Settlement accounting	Fair value with changes in value recorded in OCI; OCI reverses to earnings when contract settles
Net investment hedges	Fair value with changes recorded in cumulative translation adjustment	Fair value with changes recorded in OCI
Interest rate swaps	Settlement accounting	Fair value with changes recorded in earnings
Foreign exchange forwards	Fair value with changes recorded in asset	Fair value with changes recorded in asset

The most significant change related to the adoption of these new accounting standards is the requirement to fair value certain contractual positions related to our generating assets that have been designated as hedges. These positions were formerly accounted for on a settlement basis where revenues were recorded when the contracts were settled. The new standards require these contracts to be recorded at fair value at each balance sheet date with any change in fair value recorded in OCI. Fair values are based on current market curves and therefore fluctuate from period to period as prices change. When these contracts are ultimately settled, the fair value is removed from the balance sheet along with the related balance in OCI and revenue is recorded and cash is received.

Therefore, at the end of each period, the balance in AOCI and the corresponding risk management liability represents the value of our contract positions for our generating assets. However, though we have presented these balances accurately under GAAP, it does not fully represent the underlying economic reality and rationale. First, the amount that we will receive in the future when we deliver electricity under these contracts does not change; we will still receive the amount for which we have contracted. Second, this liability may imply that we could exit out of these contracts, which is often not possible in the short term due to market illiquidity. Third, these contracts have been entered into to seek stable cash flows, which is an important factor in maintaining investment grade credit ratios, which are a key element of our strategy. While we could leave these positions unhedged, we would be exposed to market volatility that would directly affect our actual cash flows. Finally, some of these contracts were entered into several years ago; given the movements in forward prices as these contracts are renewed they will be at higher prices and therefore reduce the amount recorded in AOCI.

To present comparable 2006 balance sheet figures, prior year balances for foreign currency and interest rate financial instruments were reclassified. Short-term and long-term risk management assets were increased by \$11.2 million and \$43.2 million respectively, and current and long-term portions of other assets were reduced by the corresponding amounts. Short-term and long-term risk management liabilities were increased by \$2.1 million and \$13.0 million respectively, and current and long-term portions of deferred credits and other long-term liabilities were

Edgar Filing: TRANSALTA CORP - Form 40-F

decreased by the corresponding amounts. As required under Section 1530, cumulative translation loss of \$64.5 million was reclassified as the opening balance of AOCI.

The majority of the changes in the values recorded in risk management assets and liabilities were reflected in the carrying value of cash flow hedges included in COD risk management assets and liabilities as well as in financial instruments used as hedges of debt and net investment in self-sustaining foreign subsidiaries. The impact of adopting these standards to our Dec. 31, 2006 balance sheet is outlined below:

	Price risk assets		Price risk liabilities		Net
	Current	Long-term	Current	Long-term	
Net risk management assets (liabilities) outstanding at Dec. 31, 2006 <i>as reported</i> ¹	\$ 72.2	\$ 65.1	\$ (32.4)	\$ (14.0)	\$ 90.9
Fair value of COD net risk management assets (liabilities) outstanding at Jan. 1, 2007	99.6	77.7	(122.2)	(276.3)	(221.2)
Fair value of hedges of debt and net investment of foreign subsidiaries at Jan. 1, 2007	12.6	61.1	(3.9)	(22.1)	47.7
Total fair values	\$ 112.2	\$ 138.8	\$ (126.1)	\$ (298.4)	\$ (173.5)

¹ Previously reported balances have been reclassified (Note 1 (T)).

MANAGEMENT'S DISCUSSION AND ANALYSIS

45

Edgar Filing: TRANSALTA CORP - Form 40-F

The gross and net of tax impact of adopting these standards to the opening balance of AOCI are outlined below:

Net risk management assets outstanding at Dec. 31, 2006 <i>as reported</i>	\$	90.9
Fair value of COD net risk management liabilities outstanding at Jan. 1, 2007		(221.2)
Fair value of hedges of debt and net investment of foreign subsidiaries at Jan. 1, 2007		47.7
Total fair value of risk management liabilities		(173.5)
Change in fair value		(264.4)
Tax		(87.1)
Adjustment to opening Accumulated Other Comprehensive Loss from fair values	\$	(177.3)
Cumulative translation adjustment at Dec. 31, 2006		(64.5)
Opening balance, Accumulated Other Comprehensive Loss	\$	(241.8)

The impact of these new accounting standards on our risk management assets and liabilities is described in more detail below along with the changes in the values of these assets and liabilities in the current period.

Section 3861 outlines disclosure requirements that are designed to enhance financial statement users' understanding of the significance of financial instruments to an entity's financial position, performance, and cash flows. The presentation requirements outlined in this Section have been adopted to our financial instruments presentation and related disclosure.

Risk Management Assets and Liabilities

We have two types of risk management assets and liabilities: (1) those that are used in the COD and Generation segments in relation to Energy Trading activities, commodity hedging activities, and other contracting activities and (2) those used in the hedging of debt and the net investment in self-sustaining foreign subsidiaries.

Consolidated

The overall balance reported in risk management assets and liabilities is shown below:

As at Dec. 31	2007			2006		
Balance Sheet Totals	Energy Trading	Other	Total	Energy Trading	Other	Total
Risk management assets						
Current	\$ 34.0	\$ 59.2	\$ 93.2	\$ 61.0	\$ 11.2	\$ 72.2
Long-term	(4.1)	126.1	122.0	21.9	43.2	65.1
Risk management liabilities						
Current	(86.5)	(18.6)	(105.1)	(30.3)	(2.1)	(32.4)
Long-term	(192.5)	(11.7)	(204.2)	(1.0)	(13.0)	(14.0)
Net risk management (liabilities) assets outstanding	\$ (249.1)	\$ 155.0	\$ (94.1)	\$ 51.6	\$ 39.3	\$ 90.9

The breakdown of the two components and their associated movements are described below.

1. Energy Trading

Our Energy Trading risk management assets and liabilities represent the fair value of unsettled (unrealized) COD transactions and certain Generation contracting activities that are accounted for on a fair value basis. Contracts qualifying for hedge accounting are identified as Hedges. All other contracts are identified as Non-hedges. With the exception of physical transmission contracts, the fair value of all Energy Trading activities is based on quoted market prices or model valuations.

The following table shows the balance sheet classifications for Energy Trading risk management assets and liabilities separately by source of valuation:

As at Dec. 31	2007			2006
	Hedges	Non-hedges	Total	
Balance Sheet Energy Trading				Total related to Energy Trading
Risk management assets				
Current	\$ 12.3	\$ 21.7	\$ 34.0	\$ 61.0
Long-term	(4.5)	0.4	(4.1)	21.9
Risk management liabilities				
Current	(76.7)	(9.8)	(86.5)	(30.3)
Long-term	(191.9)	(0.6)	(192.5)	(1.0)
Net risk management (liabilities) assets outstanding	\$ (260.8)	\$ 11.7	\$ (249.1)	\$ 51.6

TRANSALTA CORPORATION Annual Report 2007

Edgar Filing: TRANSALTA CORP - Form 40-F

As a result of adopting new accounting standards on financial instruments, as described on page 45, risk management assets and liabilities receiving hedge accounting are recorded at fair value. The impact upon previously reported values is shown in the table below along with the changes in those values during 2007:

As at Dec. 31	Hedges		Non-hedges		Total
	Fair value (market)	Fair value (model)	Fair value (market)	Fair value (model)	
Change in fair value of net assets (liabilities)					
Net risk management assets (liabilities) outstanding at Dec. 31, 2006 <i>as reported</i>	\$	\$	\$ 52.7	\$ (1.1)	\$ 51.6
Net risk management liabilities outstanding at Jan. 1, 2007 <i>fair value 1</i>	(253.0)	(19.8)	52.7	(1.1)	(221.2)
Contracts realized, amortized or settled during the period	47.9	4.5	(31.9)	(3.9)	16.6
Changes in values attributable to market price and other market changes	(59.9)	0.9	19.9	(1.8)	(40.9)
New contracts entered into during the current period	(21.6)		(9.2)	8.6	(22.2)
Changes in foreign exchange values	22.9		(4.1)	(0.2)	18.6
Changes in values attributable to discontinued hedge treatment of certain contracts	17.3		(17.3)		
Net risk management (liabilities) assets outstanding at Dec. 31, 2007 <i>fair value</i>	\$ (246.4)	\$ (14.4)	\$ 10.1	\$ 1.6	\$ (249.1)

For the year ended Dec. 31, 2007, the fair value of our net risk management liabilities associated with hedge positions decreased \$12.0 million compared to Dec. 31, 2006 primarily due to value changes associated with contracts in existence at both Dec. 31, 2006 and Dec. 31, 2007, and the change in value of contracts settled in 2007. Changes in net risk management assets and liabilities for hedge positions are reflected within the gross margin of the Generation business segment to the extent transactions have settled during the period or ineffectiveness exists in the hedging relationship. To the extent these hedges remain effective and qualify for hedge accounting, the change in value of existing and new contracts will be deferred in OCI until the delivery date of the underlying product and contract settlement occurs.

For the year ended Dec. 31, 2007, the fair value of our net risk management assets associated with non-hedge positions decreased \$39.9 million compared to Dec. 31, 2006 primarily due to the value of contracts settled during the 2007, value changes associated with contracts in existence at both Dec. 31, 2006 and Dec. 31, 2007, and the value of contracts no longer receiving hedge accounting. To the extent applicable, changes in net risk management assets and liabilities for non-hedge positions are reflected within the gross margin of both the COD and the Generation business segments.

The anticipated timing of settlement (cash received) of the above contracts over each of the next five calendar years and thereafter are as follows:

	2008	2009	2010	2011	2012	2013 and thereafter	Total
Hedges							
Fair value based on market prices	\$ (61.1)	\$ (92.8)	\$ (65.6)	\$ (25.8)	\$ (1.1)	\$	\$ (246.4)
Fair value based on models	(3.9)	(5.3)	(3.9)	(1.3)			(14.4)
	\$ (65.0)	\$ (98.1)	\$ (69.5)	\$ (27.1)	\$ (1.1)	\$	\$ (260.8)
Non-hedges							
Fair value based on market prices	\$ 9.8	\$ 0.3	\$	\$	\$	\$	\$ 10.1
Fair value based on models	2.0	(0.4)					1.6
	\$ 11.8	\$ (0.1)	\$	\$	\$	\$	\$ 11.7

Edgar Filing: TRANSALTA CORP - Form 40-F

Grand total	\$	(53.2)	\$	(98.2)	\$	(69.5)	\$	(27.1)	\$	(1.1)	\$	(249.1)
-------------	----	--------	----	--------	----	--------	----	--------	----	-------	----	---------

Non-hedge transactions extending past 2008 are generally Generation asset-backed contracts that do not qualify for hedge accounting and have a low risk profile including long-term fixed for floating power swaps and heat rate swaps. Our Energy Trading activities are mainly transactions under 18 months in duration, thereby reducing credit risk and working capital requirements compared to longer term transactions.

¹ As a result of adopting new accounting standards (Note 1(T)).

MANAGEMENT'S DISCUSSION AND ANALYSIS

47

2. Other Risk Management Assets and Liabilities

The following table shows the balance sheet classifications for other risk management assets and liabilities separately by source of valuation:

As at Dec. 31		2007			2006 Total related to non-Energy Trading
		Hedges	Non-hedges	Total	
Balance Sheet	Other				
Risk management assets					
Current	\$	56.9	\$ 2.3	\$ 59.2	\$ 11.2
Long-term		126.1		126.1	43.2
Risk management liabilities					
Current		(16.0)	(2.6)	(18.6)	(2.1)
Long-term		1.2	(12.9)	(11.7)	(13.0)
Net risk management assets (liabilities) outstanding	\$	168.2	\$ (13.2)	\$ 155.0	\$ 39.3

As a result of adopting new accounting standards on financial instruments, risk management assets and liabilities receiving hedge accounting were recorded at fair value. The impact upon previously reported values is shown below along with changes in those values during 2007:

	Hedges	Non-hedges	Total
Net other risk management assets (liabilities) at Dec. 31, 2006 <i>as reported</i>	\$ 50.1	\$ (10.8)	\$ 39.3
Net other risk management assets (liabilities) at Jan. 1, 2007 <i>fair value</i>	58.0	(10.3)	47.7
Contracts realized, amortized or settled during the period	(39.5)	(1.3)	(40.8)
Changes in values attributable to market price and other market changes	112.0	(1.6)	110.4
New contracts entered into during the current period	37.7		37.7
Net other risk management assets (liabilities) outstanding at Dec. 31, 2007 <i>fair value</i>	\$ 168.2	\$ (13.2)	\$ 155.0

For the year ended Dec. 31, 2007, the fair value of our net risk management liabilities associated with non-hedge positions increased \$2.9 million compared to Dec. 31, 2006 primarily due to market value changes. Changes in net risk management assets and liabilities for non-hedge positions are reflected within interest expense.

For the year ended Dec. 31, 2007, the fair value of our net risk management assets associated with hedge positions increased \$110.2 million compared to Dec. 31, 2006 primarily due to market value changes. Changes in net risk management assets and liabilities for hedge positions are reflected within interest expense to the extent transactions have settled during the period or ineffectiveness exists in the hedging relationship. To the extent these hedges remain effective and qualify for hedge accounting, the change in value of existing and new contracts will be deferred in OCI until settlement of the instrument, change in ownership, liquidation or reduction in the net investments of the foreign operation, or financial instrument being hedged.

The anticipated timing of settlement (cash received) of the above contracts over each of the next five calendar years and thereafter are as follows:

	2008	2009	2010	2011	2012	2013 and thereafter	Total
Hedges	\$ 41.0	\$ 72.4	\$ 24.0	\$ 10.9	\$ 4.1	\$ 15.8	\$ 168.2
Non-hedges	(0.4)	(12.8)	24.0	10.9	4.1	15.8	(13.2)
	\$ 40.6	\$ 59.6	\$ 24.0	\$ 10.9	\$ 4.1	\$ 15.8	\$ 155.0

Employee Share Ownership

Edgar Filing: TRANSALTA CORP - Form 40-F

We employ a variety of stock-based compensation plans to align employee and corporate objectives. At Dec. 31, 2007, 1.2 million options to purchase our common shares were outstanding, with 0.8 million exercisable at the reporting date. At Dec. 31, 2006, 2.2 million options to purchase our common shares were outstanding, with 1.4 million exercisable at the reporting date. There is no impact on diluted EPS as per *Note 23* to the consolidated financial statements.

Under the terms of the Performance Share Ownership Plan (PSOP), certain employees receive grants which, after three years, make them eligible to receive a set number of common shares or cash equivalent plus dividends thereon based upon our performance relative to companies comprising the Standard & Poor s (S&P)/TSX composite total index. After three years, once PSOP eligibility has been determined, 50 per cent of the common shares may be released to the participant, while the remaining 50 per cent will be held in trust for one additional year. At Dec. 31, 2007, there were 1.0 million PSOP awards outstanding (2006 1.2 million). There is no impact on diluted EPS as per *Note 23* to the consolidated financial statements.

Under the terms of the Employee Share Purchase Plan, we extend an interest-free loan to our employees below executive level for up to 30 per cent of the employee s base salary for the purchase of our common shares from the open market. The loan is repaid over a three-year period by the employee through payroll deductions unless the shares are sold, at which point the loan becomes due on demand. At Dec. 31, 2007, 0.7 million shares had been purchased by employees under this program (2006 0.6 million). This program is not available to officers and senior management.

¹ *As a result of adopting new accounting standards (Note 1(T)).*

Employee Future Benefits

We have registered pension plans in Canada and the U.S. covering substantially all employees of the Corporation, its domestic subsidiaries, and specific named employees working internationally. These plans have defined benefit and defined contribution options. In Canada, there is a supplemental defined benefit plan for Canadian-based defined contribution members whose annual earnings exceed the Canadian income tax limit. The defined benefit option of the registered pension plan ceased for new employees on June 30, 1998. The latest actuarial valuations of the registered and supplemental pension plans were as at Dec. 31, 2006.

We provide other health and dental benefits to the age of 65 for both disabled members (other post-employment benefits) and retired members (other post-retirement benefits). The last actuarial valuation of these plans was conducted at Dec. 31, 2007.

The supplemental pension plan is an obligation of the Corporation. We are not obligated to fund the supplemental plan but are obligated to pay benefits under the terms of the plan as they come due. We have posted a letter of credit in the amount of \$48.2 million to secure the obligations under the supplemental plan. Refer to *Note 33* to the consolidated financial statements.

Statements of Cash Flows

Year ended Dec. 31	2007	2006	Explanation of change
Cash and cash equivalents, beginning of year	\$ 65.6	\$ 79.3	
Provided by (used in):			
Operating activities	847.2	489.6	In 2007, cash inflows were due to cash earnings of \$781.5 million and favourable change in working capital of \$65.7 million, due to the timing of collections of revenues. In 2006, cash inflows were due to timings of collections from customers, and lower cash earnings.
Investing activities	(410.1)	(261.3)	In 2007, cash outflows were primarily due to additions of property, plant and equipment of \$599.1 million and equity investment of \$19.6 million, partially offset by realized gains on financial instruments of \$107.0 million, proceeds on sale of property, plant and equipment at \$46.9 million, and reduction in restricted cash of \$56.8 million. In 2006, cash outflows were related to capital expenditures of \$223.7 million and an increase in restricted cash of \$333.1 million, partially offset by a decrease in equity investments of \$226.4 million, realized gains on net investment hedges of \$53.9 million, and proceeds on sale of assets of \$29.4 million.
Financing activities	(443.8)	(243.2)	In 2007, cash outflows were due to dividends on common shares of \$204.8 million, net repayment of long-term debt of \$221.6 million, redemption of preferred securities of \$175.0 million, distributions paid to non-controlling interests of \$86.5 million, and repurchase of common shares under the NCIB of \$74.9 million, partially offset by

Edgar Filing: TRANSALTA CORP - Form 40-F

an increase in short-term debt of \$288.9 million.

In 2006, the cash used in financing activities increased due to repayment of long-term debt of \$396.7 million, payment of distributions to non-controlling interests of \$74.4 million, and dividend payments of \$133.9 million, partially offset by an increase in short-term debt of \$348.1 million.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Edgar Filing: TRANSALTA CORP - Form 40-F

Year ended Dec. 31	2006	2005	Explanation
Cash and cash equivalents, beginning of year	\$ 79.3	\$ 101.2	
Provided by (used in):			
Operating activities	489.6	619.8	In 2006, cash inflows were due to timings of collections from customers, and lower cash earnings.
Investing activities	(261.3)	(242.5)	In 2005, cash inflows were due to increased cash earnings offset by higher working capital requirements. In 2006, cash outflows were related to capital expenditures of \$223.7 million and an increase in restricted cash of \$333.1 million, partially offset by a decrease in equity investments of \$226.4 million, realized gains on net investment hedges of \$53.9 million, and proceeds on sale of assets of \$29.4 million.
Financing activities	(243.2)	(396.3)	In 2005, capital expenditures of \$325.9 million were offset by realized gains on net investment hedges of \$89.8 million. In 2006, the cash used in financing activities increased due to repayment of long-term debt of \$396.7 million, payment of distributions to non-controlling interests of \$74.4 million, and dividend payments of \$133.9 million, partially offset by an increase in short-term debt of \$348.1 million.
Translation of foreign currency cash	1.2	(2.9)	In 2005, cash outflows were due to the redemption of preferred securities of \$300.0 million, dividends on common shares of \$99.2 million, distribution to subsidiaries non-controlling interests of \$77.5 million, repayment of long-term debt of \$139.3 million, and repayment of short-term debt of \$23.6 million, partially offset by the issuance of long-term debt of \$200.0 million.
Cash and cash equivalents, end of year	\$ 65.6	\$ 79.3	

Operating Activities

For the year ended Dec. 31, 2007, we paid \$24.2 million of costs related to the closure of the Centralia coal mine.

Investing Activities

In 2007, we incurred \$228.7 million in capital expenditures relating to the Kent Hills, Sundance Unit 4 uprate, and Keephills 3 projects. As well, we incurred \$91.7 million in capital expenditures related to the rail handling and plant modifications at Centralia Thermal.

For the year ended Dec. 31, 2007, we realized \$15.7 million from the sale of assets relating to our Centralia coal mine.

Liquidity and Capital Resources

Liquidity risk arises from our ability to meet general funding needs, engage in trading and hedging activities, and manage the assets, liabilities and capital structure of the Corporation. Liquidity risk is managed to maintain sufficient liquid financial resources to fund obligations as they come due in the most cost-effective manner.

Our liquidity needs are met through a variety of sources, including: cash generated from operations, short-term borrowings against our credit facilities, commercial paper program, and long-term debt issued under our U.S. shelf registrations and Canadian medium-term note program. Our primary uses of funds are operational expenses, capital expenditures, dividends, distributions to non-controlling limited partners, and interest and principal payments on debt securities.

We have a total of \$725.0 million of credit available from our committed and uncommitted credit facilities. At Dec. 31, 2007, credit utilized under these facilities is comprised of short-term debt of \$651 million less cash on hand of \$51 million and letters of credit of \$550 million.

We have obligations to issue letters of credit to secure potential liabilities to certain parties including those related to potential environmental obligations, trading activities, hedging activities, and purchase obligations. At Dec. 31, 2007, we had issued letters of credit totalling \$550 million compared to \$633 million at Dec. 31, 2006. This decrease in letters of credit is due primarily to lower forward electricity prices in the Pacific Northwest. These letters secure certain amounts included in our balance sheets under Risk Management Liabilities and Asset Retirement Obligations.

TRANSALTA CORPORATION Annual Report 2007

We expect that our ability to generate adequate cash flow from operations in the short term and the long term to maintain financial capacity and flexibility to provide for planned growth remains substantially unchanged since Dec. 31, 2006. In the first quarter of 2008 we received \$115.5 million worth of PPA revenue due to timing of contractually scheduled payments. Consequently, the effect of the timing of these payments is that we will receive 13 months of revenue in 2008.

On Feb. 25, 2008, we had approximately 201.2 million common shares outstanding.

On Feb. 24, 2008, we had 1.1 million outstanding employee stock options with a weighted average exercise price of \$19.61. For the year ended Dec. 31, 2007, 0.8 million options with a weighted average exercise price of \$20.84 were exercised resulting in 0.8 million shares issued, and 0.2 million options were cancelled with a weighted average exercise price of \$17.52.

Guarantee Contracts

We have provided guarantees of subsidiaries' obligations under contracts that facilitate physical and financial transactions using various derivatives. The guarantees provided for under all contracts facilitating physical and financial transactions in various derivatives at Dec. 31, 2007 was a maximum of \$2.0 billion. In addition, we have a number of unlimited guarantees. The fair value of the trading and hedging positions under contracts where we have a net liability at Dec. 31, 2007, under the limited and unlimited guarantees, was \$331.5 million as compared to \$285.3 million at Dec. 31, 2006. The liabilities for these amounts are included in our balance sheets under Risk Management Liabilities and Accounts Payable and Accrued Liabilities.

We have also provided guarantees of subsidiaries' obligations to perform and make payments under various other contracts. The amount guaranteed under these contracts at Dec. 31, 2007 was a maximum of \$1.3 billion, as compared to \$788.3 million at Dec. 31, 2006. In addition, we have a number of unlimited guarantees.

We have approximately \$0.7 billion of credit available from our committed and uncommitted credit facilities to secure these exposures.

Working Capital

For the year ended Dec. 31, 2007, the excess of current liabilities over current assets of \$686 million is mainly due to higher short-term debt balances, and lower accounts receivable balances, partially offset by receiving November 2006 revenues, as contractually scheduled, on Jan. 2, 2007.

For the year ended Dec. 31, 2006, the negative change in working capital is primarily due to the timing of collection of revenues under PPAs, as described above and the reclassification of \$175.0 million of preferred securities to current liabilities that were redeemed in January 2007, offset by an increase in accounts receivable.

Capital Structure

Edgar Filing: TRANSALTA CORP - Form 40-F

Section 1535 specifies the disclosure of (i) an entity's objectives, policies and processes for managing capital; (ii) quantitative data about what the entity regards as capital; (iii) whether the entity has complied with any capital requirements; and (iv) if it has not complied, the consequences of such non-compliance.

Our capital structure consisted of the following components as shown below:

As at Dec. 31	2007		2006 <i>(Restated, Note 1)</i>		2005 <i>(Restated, Note 1)</i>		
Debt, net of cash, and interest-earning investments	\$	2,459.2	47%	\$ 2,517.1	45%	\$ 2,525.7	44%
Preferred securities, including current portion				175.0	3%	175.0	3%
Non-controlling interests		496.4	9%	535.0	9%	558.6	10%
Common shareholders' equity		2,298.5	44%	2,427.9	43%	2,497.0	43%
	\$	5,254.1	100%	\$ 5,655.0	100%	\$ 5,756.3	100%

Contractual repayments of long-term debt, commitments under operating leases, fixed price purchase contracts, and commitments under mining agreements are as follows:

	Fixed price gas purchase contracts	Operating leases	Coal supply and mining agreements	Long-term debt	Interest on long-term debt ¹	Total
2008	\$ 47.0	\$ 10.8	\$ 45.2	\$ 153.8	\$ 120.9	\$ 377.7
2009	26.3	9.5	49.3	237.6	112.5	435.2
2010	6.8	9.1	45.0	27.8	99.3	188.0
2011	6.8	8.9	44.8	250.5	88.1	399.1
2012	6.8	8.9	44.5	319.5	69.1	448.8
2013 and thereafter	40.9	67.3	355.1	857.7	502.4	1,823.4
Total	\$ 134.6	\$ 114.5	\$ 583.9	\$ 1,846.9	\$ 992.3	\$ 3,672.2

¹ Interest on long-term debt is based on debt currently in place with no assumption as to re-financing an instrument on maturity.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Off-Balance Sheet Arrangements

Disclosure is required of all off-balance sheet arrangements such as transactions, agreements or contractual arrangements with unconsolidated entities, structured finance entities, special purpose entities or variable interest entities that are reasonably likely to materially affect liquidity or the availability of, or requirements for, capital resources. We have no such off-balance sheet arrangements.

Related Party Transactions

In August 2006, we entered into an agreement with CE Gen, a corporation jointly controlled by ourselves and MidAmerican, a subsidiary of Berkshire Hathaway, whereby we buy available power from certain CE Gen subsidiaries at a fixed price. In addition, CE Gen has entered into contracts with related parties to provide administrative and maintenance services.

For the period November 2002 to November 2012, TA Cogen entered into various transportation swap transactions with a wholly owned subsidiary, TransAlta Energy Corporation (TEC). TEC operates and maintains TA Cogen's three combined-cycle power plants in Ontario and a plant in Fort Saskatchewan, Alberta. TEC also provides management services to Sheerness, which is operated by Canadian Utilities. The business purpose of these transportation swaps is to provide TA Cogen with the delivery of fixed price gas without being exposed to escalating costs of pipeline transportation for three of its plants over the period of the swap. The notional gas volume in the transaction was the total delivered fuel for each of the facilities. Exchange amounts are based on the market value of the contract. We entered into an offsetting contract with an external third party and therefore have no risk other than counterparty risk.

Climate Change and Air Emissions

The variety of combustible fuels used to generate electricity all have some impact on the environment. While we are pursuing a climate change strategy that includes, among other elements, investing in renewable energy resources such as wind and hydro, we believe that coal and natural gas as fuels will continue to play an important role in meeting the energy needs of the future. We place significant importance on environmental compliance to ensure we are able to continuously deliver low cost electricity.

Recently Passed Environmental Legislation

While we continue to pursue clean coal and other technologies to reduce the impact of our power generating activities upon the environment, changes in current environmental legislation do have, and will continue to have, an impact upon our business.

On Jan. 24, 2008, the Government of Alberta announced its intention to cut greenhouse gas emissions to 14 per cent below 2005 levels by 2050 through developing and implementing carbon capture and storage technologies, developing conservation and energy efficiency programs, and through increased investment in clean energy technologies. The first stage of this program is to create focus groups or task forces for each of these three areas and develop action plans. We are assessing the impact of this proposal upon our operations and our own investment in environmental technologies and programs.

Edgar Filing: TRANSALTA CORP - Form 40-F

Effective July 1, 2007, the *Climate Change and Emissions Management Amendment Act* was enacted into law in Alberta. Under the legislation, baselines and targets for GHG intensity are set on a facility by facility basis. The legislation requires a 12 per cent reduction in GHG emission intensity from a baseline of the average of 2003 to 2005 emission levels. New facilities or those in operation for less than three years are exempt; however, upon the fourth year of operations, the facility baseline is established and reduction requirements gradually increase until the eighth year by which time emissions must be 12 per cent below the established baseline. Emissions over the baseline must be mitigated either through contributions to an Alberta Technology Fund at \$15 per tonne, or through the purchase and retirement of Alberta-based offsets from non-regulated sectors. The PPAs for our Alberta-based coal facilities contain change-in-law provisions that allow us to recover compliance costs from the PPA customers. After flow-through, the annual net compliance costs were \$1.4 million for 2007, and are estimated to be approximately \$5 million per year until we are able to meet the targets for GHG emissions under the Act.

On April 26, 2007, the Canadian government released details of its proposed environmental legislation. The federal plan calls for an 18 per cent reduction in GHG emission intensity starting in 2010, increasing to a 20 per cent absolute reduction requirement by 2020. The proposed legislation also calls for a reduction in air pollutants such as sulphur dioxide, nitrous oxide, mercury, and particulates starting in the 2012 - 2015 period. Proposed reduction caps range from 45 per cent to 60 per cent of current levels. A number of material details in the federal plan are still to be determined, including its interaction with provincial programs, which will allow a reasonable determination of future compliance costs.

Both the Saskatchewan and Ontario governments, on June 14 and 18, 2007 respectively, introduced GHG programs. However, neither government provided any details as to how the plans would affect power generation facilities other than Ontario's commitment to close coal-fired units by 2014.

In the United States, the Washington State Climate Bill 6001 was enacted and came into effect on July 22, 2007. Our operations will not be impacted by the bill's performance standards at the current time, provided the facilities do not change ownership or enter into power sales contracts longer than five years. Additionally, further emissions requirements are being considered for our Centralia plant for mercury and nitrous oxide; however, final determinations are not anticipated until late 2008. Federally, the U.S. government continues to contemplate a number of proposed GHG bills but to date no clear outcome or schedule is evident.

Mercury reduction requirements in Alberta are established at a 70 per cent reduction by 2010. We submitted our mercury control plan in March 2007. We expect to formalize our investment plan in this new technology in early 2008.

TRANSALTA CORPORATION Annual Report 2007

TransAlta Activities

Reducing the environmental impact of our activities has a benefit not only to our operations and financial results, but also to the communities in which we operate. We believe that increased scrutiny will be placed on environmental emissions and compliance, and we therefore have a proactive approach to minimizing risks to our results. Our environment management programs encompasses several elements:

- construction of renewable power sources,
- active participation in policy discussions,
- development of cleaner generation technologies, and
- continued investment in an offsets portfolio.

Our investment in renewable power sources continues through the building of renewable power resources such as the Kent Hills and Blue Trail wind farms.

We are active in policy discussions at a variety of levels. These stakeholder negotiations have allowed us to engage in proactive discussions with governments to meet environmental requirements over the longer term.

As one of the founders, and active members, of the Clean Coal Power Coalition, we aim to secure a future for coal-fired electricity generation, within the context of Canada's multi-fuelled electricity industry, by proactively addressing environmental issues in cooperation with government and our stakeholders.

We are also part of a group of companies participating in the Integrated CO₂ Network to work with the Albertan and Canadian governments to develop carbon capture and storage systems for Canada.

We continue to make operational improvements and investments to our existing generating facilities to reduce the environmental impact of generating electricity. As described earlier, we are in the process of finalizing mercury control technology. In prior years we have invested in other capture technologies such as those for sulfur dioxide. We are currently investigating opportunities for carbon capture, sequestration, and storage technologies.

The PPAs for our Alberta-based coal facilities contain change-in-law provisions that allow us the opportunity to recover compliance costs from the PPA customers.

In addition, we continue to pursue emission offset opportunities that also allow us to meet emission targets at a competitive cost. We ensure that any investments in offsets will meet certification criteria in the market in which they are to be used.

2008 Outlook

Business Environment

Demand and Supply

In 2008, we believe that the growth in demand for electricity will continue at the level seen over the past three years. Without significant new generating capacity additions over the next five years and increased environmental compliance costs, the continued upward pressure on prices will continue.

Power Prices

For the remainder of 2008, power prices in Alberta are expected to remain strong due to an expected cooler than average winter. Prices in the Pacific Northwest are anticipated to face upside pressure in 2008 due to cooler than normal temperatures. Ontario power prices are forecast to strengthen compared with 2007 because of a tighter supply and a cooler winter.

In 2008, approximately four per cent of production at our gas-fired facilities and 19 per cent of production at our coal-fired facilities is exposed to market fluctuations in energy commodity prices. We closely monitor the risks associated with these commodity price changes on our future operations and, where we consider it appropriate, use various physical and financial instruments to hedge our assets and operations from such price risk.

Operations

Production, Availability, and Capacity

Generating capacity is expected to increase due to the completion of Kent Hills late in 2008. Production and availability are expected to increase due to lower unplanned outages and lower derates as a result of test burning at Centralia in 2007, partially offset by higher planned maintenance.

Fuel Costs

Mining coal in Alberta is subject to cost increases due to increased overburden removal, inflation, and diesel commodity prices. Seasonal variations in coal mining at our Alberta mines are minimized through the application of standard costing. 2008 Alberta mining costs are expected to be consistent with those seen in 2007. Fuel at Centralia Thermal is purchased from an external supplier. These contract prices are expected to increase slightly from those seen in 2007 due to contract and commodity escalations.

Edgar Filing: TRANSALTA CORP - Form 40-F

Exposure to gas costs for facilities under long-term sales contracts are minimized to the extent possible through long-term gas purchase contracts. Merchant gas facilities are exposed to the changes in spark spreads, as discussed in the Power Prices section. We have not entered into fixed commodity agreements for gas for these merchant plants as gas will be purchased coincident with spot pricing.

MANAGEMENT'S DISCUSSION AND ANALYSIS

53

Operations, Maintenance, and Administration Costs

OM&A costs per MWh of installed capacity fluctuate by quarter and are dependent on the timing and nature of maintenance activities. OM&A costs per MWh of installed capacity are anticipated in 2008 to be higher compared to 2007 due to higher planned maintenance activities.

Planned Maintenance

	Coal	Gas and hydro	Total
Capitalized	\$ 65 70	\$ 45 50	\$ 110 120
Expensed	65 70	5 10	70 80
	\$ 130 140	\$ 50 60	\$ 180 200
GWh lost	2,200 2,300	425 475	2,625 2,775

In 2008, we expect to lose approximately 2,625 to 2,775 GWh of production due to planned maintenance. During 2008, we have no significant planned maintenance activities at our Mexican operations.

Change in Estimate of Certain Components at Centralia Thermal

As a result of our decision to stop mining at the Centralia coal mine, we are now procuring all of the coal used in production at Centralia Thermal from several selected third-party vendors. The coal that is delivered from these vendors is of a different chemical composition and has a different thermal content than the coal from our Centralia coal mine. Previously, this externally sourced coal was blended with internally produced coal to maximize the output from Centralia Thermal. However, with the cessation of mining, this locally mined coal is no longer available to be blended and therefore the coal being consumed burns at a higher temperature and produces a different composition of ash. The boiler at Centralia Thermal is not currently configured to run optimally at these higher temperatures or with the different ash compositions.

During 2007, test burns were conducted to determine what equipment modifications needed to be performed to optimize this consumption of third-party delivered coal. At the end of the third quarter of 2007, a technical plan was completed including which components needed to be replaced to ensure continued maximum output from Centralia Thermal. These equipment modifications are scheduled to occur during planned maintenance outages in 2008 and 2009. As a result, the estimated useful life of the component parts that are to be replaced during these planned outages have been reduced and this change in estimate of useful life will be recognized over the period up to the related maintenance outage.

As a result, depreciation expense is expected to increase over the same comparative periods in 2006 by:

	2008				2009			
	Q1	Q2	Q3	Q4	Q1	Q2	Q3	Q4
Increase in depreciation	\$ 5.5	\$ 5.5	\$ 1.3	\$ 1.3	\$ 1.3	\$ 1.3	\$ 1.3	\$ 1.3

Energy Trading

Edgar Filing: TRANSALTA CORP - Form 40-F

Earnings from our Energy Trading business are affected by prices in the market, the positions taken, and duration of those positions. We routinely monitor both the market and our exposure to maximize earnings while still maintaining an acceptable risk profile. Our objective is for proprietary trading to contribute annually between \$50 million and \$70 million in gross margin.

Exposure to Fluctuations in Foreign Currencies

Our strategy is to minimize the impact of fluctuations in the Canadian dollar against the U.S. dollar by offsetting foreign-denominated assets with foreign-denominated liabilities and foreign exchange contracts. We also have foreign currency expenses, including interest charges, which mostly offset foreign currency revenues.

Net Interest Expense

Net interest expense for 2008 is expected to be higher due to increased borrowings as a result of growth. However, changes in interest rates and in the value of the Canadian dollar to the U.S. dollar could affect the amount of net interest expense incurred.

Liquidity and Capital Resources

With the anticipated increased volatility in power and gas markets, market trading opportunities are expected to increase, which can potentially cause the need for additional liquidity. To mitigate this liquidity risk, we maintain and monitor a \$1.8 billion committed credit facility and monitor exposures to determine any expected liquidity requirements.

TRANSALTA CORPORATION Annual Report 2007

Projects and Growth

Our capital expenditures and major projects are comprised of spending on sustaining our current operations and for growth activities.

Four significant capital projects that we are currently working on are Keephills 3, Kent Hills, Centralia modifications, and Blue Trail projects. A summary of each of these projects is outlined below:

Project	Total spend (millions)	Expected 2008 spend (millions)	Expected completion date	Details	Status
Keephills 3	\$ 815	\$ 320 330	Q1 2011	A 450 MW (225 MW net of ownership) coal-fired supercritical plant in a partnership with EPCOR	On track
Kent Hills	\$ 170	\$ 135 145	Q4 2008	96 MW wind farm in New Brunswick to operate under a power purchase agreement with New Brunswick Power Distribution and Customer Service Corporation	On track
Centralia modifications	\$ 185	\$ 60 65	Q3 2009	Convert the boilers and critical fuel systems at Centralia Thermal to ensure that both units at this facility can produce full output, on a sustainable basis, solely burning PRB coal	On track
Blue Trail	\$ 115	\$ 20 25	Q4 2009	A 66 MW wind farm in southern Alberta	On track

Sustaining Expenditures

Sustaining expenditures include planned maintenance, regular expenditures on plant equipment, systems and related infrastructure, as well as investments in our mines. For 2008, our estimate for total sustaining capital expenditures, excluding Mexico and Centralia modifications listed above, is between \$365 million and \$395 million, allocated among:

\$155 \$165 million for routine capital,
 \$100 \$110 million for mining equipment, and
 \$110 \$120 million on planned maintenance.

Financing

Financing for these expenditures is expected to be provided by cash flow from operating activities and from existing borrowing capacity.

Risk Management

Our business activities expose us to a wide variety of risks. Our goal in managing these risks is to protect our Company from an unacceptable level of earnings or financial exposure while still enabling business processes and opportunities. We use a multi-level risk management oversight structure to manage these objectives, by ensuring that the risks arising from our business activities, the markets in which we operate, and the

political environments in which we operate is mitigated.

The responsibilities of the various stakeholders of our risk management oversight structure are described below:

Board of Directors provides stewardship of the Corporation and establishes policies and procedures.

Audit and Risk (A&R) Committee, established by the Board of Directors, provides assistance to the Board of Directors in fulfilling its oversight responsibility relating to the integrity of our financial statements and the financial reporting process; the systems of internal accounting and financial controls; the internal audit function; the external auditors' qualifications, terms and conditions of appointment, including remuneration, independence, performance and reports; and the legal and risk compliance programs as established by management and the Board of Directors. The A&R Committee approves our Commodity Risk and Financial Exposure Management policies.

Exposure Management Committee (EMC) is chaired by our Chief Financial Officer and is comprised of the Executive Vice-President of Commercial Operations and Development, Vice-President and Treasurer, Vice-President Financial Operations, Vice-President and Comptroller, and the Director of Risk Management. The EMC is responsible for reviewing, monitoring, and reporting on our compliance with approved financial and commodity risk exposure management policies.

Corporate Treasury is responsible for the management, oversight, and reporting of our capital position, credit risk, and funding risks. One of its goals is to minimize the cost of capital while optimizing returns to shareholders.

Risk Management is staffed by competent and experienced risk professionals who are responsible for enterprise risk reporting to the Board, analyzing commercial risk exposures in our assets and trading operations, as well as ensuring our daily market price exposure is kept within VAR limits. The Risk Management group uses a variety of processes and models to perform this analysis.

Our risk management practices address key risk factors. These are described in greater detail as follows.

MANAGEMENT'S DISCUSSION AND ANALYSIS

Risk Controls

Our management of these risks is also described in the respective sections. Our risk controls have several key components:

Enterprise Tone Our corporate values are clearly articulated throughout the organization. Employees sign agreements outlining their commitment to our corporate code of conduct.

Policies We maintain a set of enterprise-wide policies that have been established to address key risks. These policies establish delegated authorities and limits for business transactions. We perform periodic reviews and audits to ensure compliance with these policies.

Reporting We regularly report risk exposures to key decision makers including the Board of Directors, senior management, and the EM Committee. This reporting includes analysis of risks being assumed, existing risk exposures, and recommendations for any suggested course of action. This frequent reporting provides for effective and timely risk management and oversight.

Whistleblower System We have a system in place where employees may report any potential ethical concerns. These concerns are directed to the Vice-President Internal Audit who engages Corporate, Legal and Human Resources in determining the appropriate course of action. These concerns and any actions taken are discussed with the Audit and Risk Committee.

Risk Factors

Risk is inherent in all business activities and cannot be entirely eliminated. However, shareholder value can be maintained and enhanced by identifying, mitigating, and where possible, insuring against these risks.

The following section addresses some, but not all, risk factors that could affect our future results and our activities in mitigating those risks. These risks do not occur in isolation, but must be considered in conjunction with each other.

Certain sections will show the after-tax effect on net earnings and/or cash flows of changes in certain key variables. The analysis is based on business conditions and production volumes in 2007. Each item in the sensitivity analysis assumes all other potential variables are held constant. While these sensitivities are applicable to the period and magnitude of changes on which they are based, they may not be applicable in other periods, under other economic circumstances, or for greater magnitude of changes.

Volume Risk

Edgar Filing: TRANSALTA CORP - Form 40-F

Volume risk relates to the variances from our expected production. Where we are unable to produce sufficient quantities of output in relation to contractually specified volumes, we may be required to pay penalties or purchase replacement power in the market.

Our hydro operations financial performance is partially dependent upon the availability of water in a given year. The availability of water is difficult to forecast as it is primarily driven by weather. Such water availability introduces a degree of volatility in revenues earned by our hydro operations from year to year. This risk is complicated by obligations imposed within the PPA applicable to our Alberta hydro facilities. A monthly financial obligation must be paid to the PPA buyer, based on a predetermined quantity of energy and ancillary services at market prices, regardless of our ability to generate such quantities.

We also play an important role in the management of water flows and levels in several key areas of Alberta, including two major cities. We carefully balance all of these factors together to achieve optimal productivity with the water resources available.

Our wind and geothermal operations are dependant upon the availability of wind and geothermal resources.

We manage these risks by:

- actively managing our assets and their condition through the Generation and Generation Technology groups in order to be proactive in plant maintenance,
- monitoring water resources throughout Alberta to the best of our ability and optimizing this resource against real-time electricity market opportunities,
- placing our wind and geothermal facilities in locations that we believe have sufficient resources in order for us to be able to generate sufficient electricity to meet the requirements of contracts. However, we cannot guarantee that these resources will be available when we need them or in the quantities that we require, and
- monitoring market volumes and liquidity to ensure sufficient volumes are available to fulfill proprietary trading requirements.

The sensitivities of volumes to our net income are described below:

Factor	Increase or decrease	Approximate impact on earnings and cash flow (after-tax)
Availability/production	1%	\$ 20.5

TRANSALTA CORPORATION Annual Report 2007

Generation Equipment and Technology Risk

Our plants are exposed to operational risks such as fatigue cracks in boilers, corrosion in boiler tubing, turbine failures, and other issues that can lead to outages. If plants do not meet availability or production targets specified in their PPA or other long-term contracts, we must either compensate the purchaser for the loss in the availability of production or suffer a reduction in electrical or capacity payments. For merchant facilities, an extended outage can result in lost merchant opportunities. Therefore, an extended outage could have a material adverse effect on our business, financial condition, results of operations, or our cash flows.

Technology used in our generating facilities is selected and maintained with the goal of maximizing the return on those assets. If technology advances significantly beyond the capabilities of our existing fleet, our profitability and carrying value of assets may be affected.

As well, we are exposed to procurement risk for specialized parts that may have long lead times. If we are unable to procure these parts when they are needed for maintenance activities, we could face an extended period with our equipment unavailable to produce electricity.

We manage our generation equipment and technology risk by:

- operating our generating facilities within defined and proven operating standards that are designed to maximize the output of our generating facilities for the longest period of time,
- performing preventative maintenance on a regular basis,
- adhering to a comprehensive plant maintenance program and regular turnaround schedules,
- having sufficient business interruption insurance in place in the event of an extended outage,
- having force majeure clauses in the PPAs and other long-term contracts,
- monitoring technological advances and evaluating their impact upon our existing generating fleet and related maintenance programs,
- negotiating strategic supply agreements with selected vendors to ensure key components are available in the event of a significant outage,
- and
- developing a long-term asset management strategy with the objective of maximizing the life cycles of our existing facilities and/or replacement of selected generating assets.

Commodity Price Risk

We have exposure to movements in certain commodity prices, including the market price of electricity and fuels used to produce electricity in both our electricity generation and proprietary trading businesses.

We manage electricity price commodity risk by:

- entering into long-term contracts that specify the price at which electricity, steam and other services are provided,
- entering into a variety of short- and long-term contracts to minimize our exposure to short-term fluctuations in electricity prices,
- purchasing natural gas coincident with production for merchant plants so spot market spark spreads are adequate to produce and sell electricity at a profit, and
- ensuring limits and controls are in place for our proprietary trading activities to ensure they are in line with VAR methodologies. VAR is the primary measure used to manage COD's exposure to market risk resulting from trading activities.

Edgar Filing: TRANSALTA CORP - Form 40-F

In 2007, we had approximately 96 per cent of production under short-term and long-term contracts and hedges (2006 95 per cent). In the event of a planned or unplanned plant outage or other similar event, however, we are exposed to changes in electricity prices on purchases of electricity from the market to fulfill our supply obligations under these short- and long-term contracts.

We manage fuel price commodity risk by:

entering into long-term contracts that specify the price at which fuel is to be supplied to our plants, and using hedges, where available, to set prices for fuel.

We are exposed to increases in the cost of fuels used in production to the extent such increases are greater than the increases in the price that we can obtain for the electricity we produce. In 2007, 81 per cent (2006 68 per cent) of our cost of gas used in generating electricity was contractually fixed or passed through to our customers and 100 per cent (2006 100 per cent) of our purchased coal costs were contractually fixed.

We monitor the market for opportunities to enter into favorably priced long-term gas contracts.

The sensitivities of price changes to our net income are described below:

Factor	Increase or decrease	Approximate impact on earnings and cash flow (after-tax)
Electricity price	\$ 1.00/MWh	\$ 8.3
Natural gas price	\$0.1/GJ	\$ 1.5
Coal price	\$ 1.00/tonne	\$ 15.0

MANAGEMENT'S DISCUSSION AND ANALYSIS

Fuel Supply Risk

We buy natural gas and some of our coal to supply the fuel needed to operate our facilities. The ability to have sufficient fuel available when required for generation could have an impact upon our ability to produce electricity under contracts and for merchant sale opportunities.

Higher input costs, such as diesel, tires, the price of mining equipment, increased amounts of overburden being removed to access coal reserves, and mining operations moving further away from the power plants are all contributing to increased mining costs to our customers. Additionally, the ability of the mines to deliver coal to the power plants can be impacted by weather conditions and labour relations. At Centralia Thermal, interruptions at our suppliers' mines and the availability of trains to deliver coal could affect our ability to generate electricity.

We manage fuel supply risk by:

- ensuring that the majority of the coal used in electrical generation is from coal reserves owned by us, thereby limiting our exposure to fluctuations in supply of coal from third parties. As at Dec. 31, 2007, approximately 70 per cent of the coal used in generating activities is from coal reserves owned by us,
- using longer term mining plans to ensure the optimal supply of coal from our mines,
- sourcing the majority of the coal used at Centralia Thermal under a mix of short-, medium-, and long-term contracts and from multiple mine sources to ensure sufficient coal is available at a competitive cost,
- negotiating for the availability of sufficient trains to deliver the coal requirements at Centralia Thermal in excess of five years, and
- upgrading the coal handling and storage facilities at Centralia Thermal to ensure that the coal being delivered can be processed in a timely and efficient manner.

We believe adequate supplies of natural gas at reasonable prices will be available for plants when existing supply contracts expire.

Environmental Risk

Environmental risks are risks to our business associated with changes in environmental regulations or exposures. New emission reduction objectives for the power sector are being established by governments in Canada and the United States. We anticipate continued and growing scrutiny by investors relating to sustainability performance. These changes to regulations may affect our earnings by imposing additional costs on the generation of electricity from exceeding emission caps, requiring additional capital investments in emission capture technology, or requiring us to invest in offset credits. It is anticipated that these costs will increase due to increased political and public attention to environmental concerns.

We manage environmental risk by:

- seeking continuous improvement in numerous performance metrics such as emissions, safety, land and water impacts, and environmental incidents,
- having an ISO-based EHS management system in place that is designed to continuously improve environmental performance,
- committing significant effort to work with regulators in Canada and the United States to ensure regulatory changes are well-designed and cost-effective,
- developing compliance plans that address how to meet or exceed emission standards for greenhouse gases, mercury, sulphur dioxide and oxides of nitrogen, which will be adjusted as regulations are finalized,
- purchasing emission reduction offsets outside of our operations,

Edgar Filing: TRANSALTA CORP - Form 40-F

investing in renewable energy projects, such as wind generation, and investing in clean coal technology development, which provides long-term promise for large emission reductions from fossil-fired generation.

We strive to maintain compliance with all environmental regulations relating to operations and facilities. Compliance with both regulatory requirements and management system standards is regularly audited through our performance assurance policy and results are reported quarterly to our Board of Directors.

In 2007, we spent approximately \$46 million (2006 \$50 million) on environmental management activities, systems, and processes.

We are a founder of the Canadian Clean Power Coalition, which is an industry consortium developed to build Canada's first clean coal power plant.

TRANSALTA CORPORATION Annual Report 2007

Credit Risk

Credit risk is the risk to our business associated with changes in creditworthiness of entities with which we have commercial exposures. This risk is comprised of the ability of a counterparty to fulfill their financial obligations to us or where we have made a payment in advance of a product or service being delivered. The inability to collect cash due to us or receiving products or services would have an adverse impact upon our cash flows.

We manage our exposure to credit risk by:

establishing and adhering to established policies that define credit limits based on creditworthiness of counterparties, define contract term limits, and credit concentration with any specific counterparties, using formal signoff on contracts that include commercial, finance, legal, and operational reviews, using security instruments, such as parental guarantees, letters of credit, and cash collateral that can be collected if a counterparty fails to fulfill their obligation, and reporting our exposure on a variety of methods which allow key decision makers to assess credit exposure by counterparty. This reporting allows us to assess credit limits for counterparties and the mix of counterparties based on their credit ratings.

If the credit exposure limits are exceeded, we take steps to reduce this exposure such as requesting collateral, if applicable, or by halting commercial activities with the affected counterparty. However, there can be no assurances that we will be successful in avoiding losses as a result of a contract counterparty not meeting its obligations.

We are exposed to minimal credit risk for Alberta PPAs because under the terms of these arrangements, receivables are substantially all secured by letters of credit.

A summary of our credit exposure for commodity trading operations at Dec. 31, 2007 is provided below:

Counterparty credit rating	Net exposure
Investment grade	\$ 47.2
Non-investment grade	\$ 5.1
No external rating, internally rated as investment grade	\$ 20.2
No external rating, internally rated as non-investment grade	\$ 2.2

In addition to the above, we have credit exposure to counterparties under long-term sales contracts. There is no net exposure in our commodity trading operations for any counterparty greater than 10 per cent.

The maximum credit exposure to any one customer for commodity trading operations, excluding the California Independent System Operator (ISO) and California Power Exchange (PX), and including the fair value of open trading positions, is \$6.3 million.

Currency Rate Risk

Edgar Filing: TRANSALTA CORP - Form 40-F

We have exposure to various currencies as a result of our investments and operations in foreign jurisdictions, the earnings from those operations, and the acquisition of equipment and services from foreign suppliers. We have exposures primarily to the U.S., Mexican, and Australian currencies. Changes in the values of these currencies in relation to the Canadian dollar may affect our earnings or value of our foreign investments, to the extent these positions or cash flows are not hedged.

We manage our currency rate risk by:

hedging our net investments in foreign operations using a combination of foreign-denominated debt and financial instruments. Our strategy is to offset 90 to 100 per cent of all foreign currency exposures. At Dec. 31, 2007, we hedged approximately 99 per cent (2006 88 per cent) of our foreign currency net investment exposure, and offsetting earnings from our foreign operations as much as possible by using expenditures denominated in the same foreign currencies. We use financial instruments to hedge the balance of our foreign operations earnings.

Translation gains and losses related to the carrying value of our foreign operations are included in AOCI in shareholders' equity. At Dec. 31, 2007, the balance in this account was a \$244.8 million loss (2006 \$64.5 million loss).

The sensitivity of changes in foreign exchange rates upon our earnings is shown below:

Factor	Increase or decrease (Foreign Currency)	Approximate impact on earnings and cash flow (after-tax)
Exchange rate	\$0.10	\$ 0.2

MANAGEMENT'S DISCUSSION AND ANALYSIS

Liquidity Risk

Liquidity risk relates to our ability to access capital to be used in proprietary trading activities, commodity contracting, and in debt and equity markets. Investment grade ratings support contracting activities and provide better access to capital markets through commodity and credit cycles. We are focused on maintaining a strong balance sheet and stable investment grade credit ratings.

We are exposed to liquidity risk under certain electricity and natural gas purchase and sale contracts entered into for the purposes of asset-backed sales and proprietary trading. The terms and conditions of these contracts require us to provide collateral when the fair value of these contracts is in excess of any credit limits granted by our counterparties and the contract obliges us to provide the collateral. Downgrades in our creditworthiness by certain credit rating agencies may decrease the credit limits granted by our counterparties and accordingly increase the amount of collateral we may have to provide.

We manage liquidity risk by:

- monitoring liquidity on trading positions,
- preparing and revising longer-term financing plans to reflect changes in business plans and market availability of capital,
- reporting liquidity risk exposure for proprietary trading activities on a regular basis to the EMC, senior management, and Board of Directors,
- and
- maintaining investment grade credit ratings.

The maximum amount of collateral that we would have to provide under existing contracts for our commodity trading operations and with our existing credit ratings is \$33.4 million at Dec. 31, 2007. Total collateral available to the Corporation was approximately \$725 million.

Interest Rate Risk

Changes in interest rates can impact our borrowing costs and the capacity revenues we receive from our Alberta PPA plants. Changes in our cost of capital may also affect the feasibility of new growth initiatives.

We manage interest rate risk by:

- employing a combination of fixed and floating rate debt instruments, and
- monitoring the mixture of floating and fixed rate debt and adjusting where necessary to ensure a continued efficient mixture of these types of debt.

At Dec. 31, 2007, approximately 34.8 per cent (2006 28.4 per cent) of our total debt portfolio was subject to movements in floating interest rates through a combination of floating rate debt and interest rate swaps.

The sensitivity of changes in interest rates upon our earnings is shown below:

Factor	Increase or decrease	Approximate impact on earnings and cash flow (after-tax)
Interest rate	1%	\$ 6.2

Project Management Risk

As we are currently building three generating projects, we face risks associated with cost-overruns, delays, and performance.

We attempt to minimize these risks by:

performing detailed analysis of project economics prior to construction or acquisition and by determining our asset contracting strategy to ensure the right mix of contracted and merchant capacity prior to commencement of construction, partnering with those who have previously been able to deliver projects economically and on budget. Our partnership with EPCOR on the construction of Keephills 3 is a direct result of this type of partnership, developing and following through with comprehensive plans that include critical paths identified, key delivery points, and backup plans, ensuring project closeouts so that any learnings from the project are incorporated into the next significant project, fixing the price and availability of the equipment, warranties and source agreements prior to proceeding with the project, and entering into labour agreements to provide security around cost and productivity.

Human Resource Risk

Human resource risk relates to the potential impact upon our business as a result of changes in the workplace.

This risk can occur in several ways:

potential disruption as a result of labour action at our generating facilities, reduced productivity due to turnover in out-of-scope positions, inability to complete critical work due to vacant positions, failure to maintain fair compensation with respect to market rate changes, and reduced competencies due to insufficient training, failure to transfer knowledge from existing employees, or insufficient expertise within current employees.

We manage this risk by:

monitoring industry compensation and aligning salaries with those benchmarks,
using incentive pay to align employee goals with corporate goals,
monitoring and managing target levels of employee turnover, and
ensuring new employees have the appropriate training and qualifications to perform their jobs.

Of our labour force, 46 per cent is covered by 13 collective bargaining agreements. In 2007, eight agreements were renegotiated. We anticipate negotiating two agreements in 2008. We do not anticipate any significant issues in the renewal of these agreements.

Regulatory and Political Risk

Regulatory and political risk describes the risk to our business associated with existing regulatory structures and the political influence upon those structures. The generation of electricity is under increased political scrutiny due to decreasing reserve margins, increased demand, and a lack of new generating capacity. This risk can come from market re-regulation, increased oversight and control, or other unforeseen influences. We are not able to predict whether there will be any changes in the regulatory environment or the ultimate effect of changes in the regulatory environment on our business.

We manage these risks by working with governments, regulators, and other stakeholders to resolve issues. We are active in policy discussions at a variety of levels. These stakeholder negotiations have allowed us to engage in proactive discussions with governments over the longer term.

International investments are subject to unique risks and uncertainties relating to the political, social, and economic structures of the respective country and such country's regulatory regime. We mitigate this risk through the use of non-recourse financing and political risk insurance.

Transmission Risks

Access to transmission lines and sufficient capacity in those transmission lines are key in our ability to deliver power to our customers. However, with the continued growth in demand for electricity coupled with very little transmission capacity being added to existing infrastructures, the reliability and capacity on the existing transmission facilities, the risk associated with the existing transmission infrastructure in Alberta, Ontario, and the Pacific Northwest continues to develop.

Transmission risks are mitigated through:

force majeure clauses in the Alberta PPAs,
developing and ensuring continued access to multiple transmission lines, and
working with governments, regulators, and stakeholders to ensure that transmission constraints are removed through timely transmission development or technology additions.

Reputation Risk

Our reputation is one of our most valued assets. Reputation risk relates to the risk associated with our business because of changes in opinion from the general public, private stakeholders, governments, and other entities.

We manage reputation risk by:

- clearly communicating our business objectives and priorities to a variety of stakeholders on a routine basis,
- maintaining positive relationships with various levels of government,
- pursuing sustainable development as a longer-term corporate strategy,
- ensuring that each business decision is made with integrity and in line with our corporate values, and
- communicating the impact and rationale of business decisions to stakeholders in a timely manner.

We are dedicated to operating a safe and ethical organization. We have a system in place where employees may report any potential ethical concerns. These concerns are directed to the Vice-President Internal Audit who engages Corporate, Legal, and Human Resources in determining the appropriate course of action. These concerns and any actions taken are discussed with the Audit and Risk Committee. All employees are required to sign a corporate code of conduct on an annual basis.

Corporate Structure Risk

We conduct a significant amount of business through subsidiaries and partnerships. Our ability to meet and service debt obligations is dependent upon the results of operations of our subsidiaries and the payment of funds by our subsidiaries in the form of distributions, loans, dividends, or otherwise. In addition, our subsidiaries may be subject to statutory or contractual restrictions that limit their ability to distribute cash to us.

MANAGEMENT'S DISCUSSION AND ANALYSIS

General Economic Conditions

Changes in general economic conditions impact product demand, revenue, operating costs, timing and extent of capital expenditures, the net recoverable value of PP&E, results of financing efforts, credit risk, and counterparty risk.

Income Taxes

Our operations are complex, and located in different countries. The computation of the provision for income taxes involves tax interpretations, regulations, and legislation that are continually changing. Our tax filings are subject to audit by taxation authorities. Management believes that it has adequately provided for income taxes as required by GAAP, based on all information currently available.

The sensitivity of changes in income tax rates upon our earnings is shown below:

Factor	Increase or decrease	Approximate impact on earnings and cash flow (after-tax)
Tax rate	1%	\$ 3.8

The effective income tax rate can change depending on the mix of earnings from various countries. Increased operating income will incur income tax expense at a rate of approximately 30 per cent compared to the forecasted overall range of 23 to 28 per cent.

Legal Contingencies

We are occasionally named as a defendant in various claims and legal actions. Exposure to these claims is mitigated through levels of insurance coverage considered appropriate by management and active management of these claims. Except as disclosed in *Note 28* to the consolidated financial statements, we do not expect the outcome of the claims or potential claims to have a materially adverse effect on the Corporation as a whole.

Other Contingencies

We maintain a level of insurance coverage deemed appropriate by management. There were no significant changes to our insurance coverage during 2007. Our insurance coverage may not be available in the future on commercially reasonable terms. There can be no assurance that insurance proceeds received by the Corporation for any loss or damage will be fully adequate to compensate for losses incurred.

Critical Accounting Policies and Estimates

The selection and application of accounting policies is an important process that has developed as our business activities have evolved and as accounting rules have changed. Accounting rules generally do not involve a selection among alternatives, but involve an implementation and interpretation of existing rules and the use of judgment relative to the circumstances existing in the business. Every effort is made to comply with all applicable rules on or before the effective date, and we believe the proper implementation and consistent application of accounting rules is critical.

However, not all situations are specifically addressed in the accounting literature. In these cases, our best judgment is used to adopt a policy for accounting for these situations. We draw analogies to similar situations and the accounting guidelines governing them, consider foreign accounting standards, and consult with our independent auditors about the appropriate interpretation and application of these policies. Each of the critical accounting policies involves complex situations and a high degree of judgment either in the application and interpretation of existing literature or in the development of estimates that impact our consolidated financial statements.

Our significant accounting policies are described in *Note 1* to the consolidated financial statements. The most critical of these policies are those related to revenue recognition, PP&E, goodwill, asset retirement obligations, income taxes, employee future benefits, and financial instruments (*Notes 1(C), (F), (G), (I), (L), (M), and (O), respectively*). Each policy involves a number of estimates and assumptions to be made about matters that are highly uncertain at the time the estimate is made. Different estimates, with respect to key variables used for the calculations, or changes to estimates, could potentially have a material impact on our financial position or results of operations.

We have discussed the development and selection of these critical accounting estimates with our A&R Committee and our independent auditors. The A&R Committee has reviewed and approved our disclosure relating to critical accounting estimates in this MD&A.

Tables are provided in the following discussion to reflect the sensitivities associated with changes in key assumptions used in the estimates. The tables reflect an increase or decrease in the percentage or other factor for each assumption. The inverse of each change is generally expected to have a similar opposite impact. Each separate item in the sensitivity assumes all other factors remain constant.

These critical accounting estimates are described below.

Revenue Recognition

The majority of our revenues are derived from the sale of physical power and from energy marketing and trading activities. Revenues under long-term electricity and thermal sales contracts generally include one or more of the following components: fixed capacity payments for being available, energy payments for generation of electricity, availability incentives or penalties for exceeding or not meeting availability targets, excess energy payments for power generation above committed capacity, and ancillary services. Each of these components is recognized upon output, delivery, or satisfaction of contractually specific targets. Revenues from non-contracted capacity are comprised of energy payments for each MWh produced at market prices and are recognized upon delivery.

Trading activities use derivatives such as physical and financial swaps, forward sales contracts, and futures contracts and options, which are used to earn trading revenues and to gain market information. These derivatives are accounted for using fair value accounting and are presented on a net basis in the statements of earnings. The initial recognition of fair value and subsequent changes in fair value affect

reported earnings in the period the change occurs. The fair values of those instruments that remain open at the balance sheet date represent unrealized gains or losses and are presented on the balance sheets as risk management assets or liabilities. Non-derivative contracts are accounted for using the accrual method with changes in fair value being recorded in the Statements of Other Comprehensive Income and are presented on the balance sheets as risk management assets or liabilities.

The determination of the fair value of Energy Trading contracts and derivative instruments is complex and relies on judgments concerning future prices, volatility, and liquidity, among other factors. The majority of derivatives traded by us have quoted market prices or over-the-counter quotes available from brokers. However, some derivatives are not traded on an active exchange or extend beyond the time period for which exchange-based quotes are available. These derivatives require the use of internal valuation techniques or models (mark-to-model accounting).

Mark-to-model accounting is currently used for physical and financial forward contracts and option contracts on transmission and transmission congestion. Accrual accounting is used for transmission rights acquired to sell production from our plants and physical transmission rights used by the COD segment. Changes in fair value of derivatives subsequent to inception are recorded on the consolidated balance sheets as price risk management assets or liabilities with the offset recorded in revenues. The values can be favourable or unfavourable, and depending on current market conditions, values can fluctuate significantly with the effect of changes being recorded through earnings in the period of the change. Modelling techniques require us to model future prices, price correlation, market volatility, liquidity, and other forecasted market intelligence, as well as the use of mathematical extrapolation techniques. Where appropriate, the estimates used to derive fair value reflect the potential impact for uncertainties in the modelling process, the potential impact of liquidating our position in an orderly manner over a reasonable period of time under present market conditions and operational risk. We validate our mark-to-model results by comparing them against settled data. The amounts reported in the financial statements may change as estimates are revised to reflect actual results or new information, changes in market conditions, or other factors, many of which are beyond our control, and may be material.

Key variables used in the models are uncertain. Sensitivities of the valuation, which would have been recorded in earnings in the current year, are as follows:

Factor	Increase or decrease	Approximate impact on earnings and cash flow (after-tax)
Change in volatility	1%	\$ 0.3
Change in commodity price	1%	\$ 0.8

There have been no significant changes to the modelling techniques in the past three years.

Valuation of PP&E

As at Dec. 31, 2007, PP&E makes up 71.3 per cent of our assets, of which 99 per cent relates to the Generation segment. On an annual basis, and when indicators of impairment exist, we determine whether the net carrying amount of PP&E is recoverable from future undiscounted cash flows. Factors which could indicate that an impairment exists include significant underperformance relative to historical or projected operating results, significant changes in the manner or use of the assets, the strategy for our overall business, and significant negative industry or economic trends. In some cases, these events are clear. However, in many cases, a clearly identifiable event indicating possible impairment does not occur. Instead, a series of individually insignificant events occur over a period of time leading to an indication that an asset may be impaired. This can be further complicated in situations where we are not the operator of the facility. Events can occur in these situations that may not be known until a date subsequent to their occurrence.

Edgar Filing: TRANSALTA CORP - Form 40-F

Our businesses, the markets, and the business environment are continually monitored, and judgments and assessments are made to determine whether an event has occurred that indicates possible impairment. If such an event has occurred, an estimate is made of the future undiscounted cash flows from the asset. If the total of the undiscounted future cash flows (excluding financing charges, with the exception of plants that have specifically dedicated debt), is less than the carrying amount of the asset, an asset impairment charge must be recognized in our financial statements. The amount of the impairment recognized is calculated by subtracting the fair value of the asset from the carrying value of the asset. Fair value is the amount at which an item could be bought or sold in a current transaction between willing parties, and is best estimated by calculating the net present value of future expected cash flows related to the asset. Both the identification of events that may trigger an impairment and the estimates of future cash flows and the fair value of the asset require considerable judgment.

The assessment of asset impairment requires management to make significant assumptions about future sales prices, cost of sales, production and fuel consumed over the life of the plants (up to 30 years), retirement costs, and discount rates. In addition, when impairment tests are performed, the estimated useful lives of the plants are reassessed, with any change accounted for prospectively.

In estimating future cash flows of the plants, we use estimates of contracted and future market prices based on expected market supply and demand in the region in which the plant operates, anticipated production levels, planned and unplanned outages, and transmission capacity or constraints for the remaining life of the plant. Actual results can, and often do, differ from the estimates, and can have either a positive or negative impact on the estimate of the impairment charge, and may be material.

On an annual basis, or as events indicate, we perform an impairment review of our plants. As a result of this review, in 2007, there were no material changes. In 2006, we recorded an impairment charge for the Centralia Gas plant as the full book value of this plant was unlikely to be recovered from future cash flows due to changes in outlook for dispatch rates and trading values and their impact on plant profitability (for further discussion please refer to the Significant Events of this MD&A). From the results of our current impairment review, had assumptions been made that resulted in future cash flows of the plants declining by 10 per cent, none of our plants would have been impaired at Dec. 31, 2007.

As a result of the decision to cease mining activities at the Centralia coal mine, we wrote down mining and reclamation equipment as well as mining infrastructure to the lower of net book value and fair value. For further discussion please refer to the Significant Events section of this MD&A.

MANAGEMENT'S DISCUSSION AND ANALYSIS

In 2005, we determined that the Ottawa plant was impaired in the accounts of TA Cogen. A fundamental shift in the gas markets and forecast increases in the cost of natural gas lowered expected margins from the Ottawa plant as TA Cogen does not have a gas supply contract in place for the period 2008 - 2012 to match the contract to provide electricity under predetermined prices to the Ontario Electricity Financial Corporation (OEFC). Based upon the current view of gas costs and market conditions for that period and the likelihood that the plant will not operate as extensively beyond 2012, a reduction in the carrying value was required and a charge of \$36.2 million was recognized in 2005. For further discussion please refer to the Significant Events section of this MD&A.

Asset Retirement Obligations (ARO)

We recognize ARO for PP&E in the period in which they are incurred if there is a legal obligation for us to reclaim the plant and/or site and if a reasonable estimate of a fair value can be determined. The fair value of the liability is described as the amount at which the liability could be settled in a current transaction between willing parties. Expected values are probability weighted to deal with the risks and uncertainties inherent in the timing and amount of settlement of many ARO. Expected values are discounted at the risk-free interest rate adjusted to reflect the market's evaluation of our credit standing.

At Dec. 31, 2007, the ARO recorded on the consolidated balance sheets were \$276.2 million. We estimate the undiscounted amount of cash flow required to settle the ARO is approximately \$0.8 billion, which will be incurred between 2008 and 2072. The majority of the costs will be incurred between 2020 and 2030. A discount rate of eight per cent was used to calculate the carrying value of the ARO.

Sensitivities for the major assumptions are as follows:

Factor	Increase or decrease	Approximate impact on earnings and cash flow (after-tax)
Discount rate	1%	\$ 1.9
Undiscounted ARO	1%	\$ 0.1

Useful Life of PP&E

PP&E is depreciated over its estimated useful life. Estimated useful lives were determined based on current facts and past experience, and take into consideration the anticipated physical life of the asset, existing long-term sales agreements and contracts, current and forecasted demand, and the potential for technological obsolescence. Major components of plants are depreciated over their own useful lives. A component is a tangible asset that can be separately identified as an asset and is expected to provide a benefit of greater than one year.

Depreciation and amortization expense was \$405.9 million in 2007, of which \$32.8 million relates to mining equipment, and is included in fuel and purchased power.

The rates used are reviewed on an ongoing basis to ensure they continue to be appropriate, and are also reviewed in conjunction with impairment testing, as discussed above.

Edgar Filing: TRANSALTA CORP - Form 40-F

A five per cent change in the estimated useful life of depreciable assets will result in a change of \$20.3 million in depreciation and amortization expense (2006 \$19.2 million).

Valuation of Goodwill

We evaluate goodwill for impairment at least annually or more frequently if indicators of impairment exist. If the carrying value of a reporting unit, including goodwill, exceeds the reporting unit's fair value, any excess represents a goodwill impairment loss. A reporting unit is a portion of the business for which we can identify specific cash flows.

Goodwill was recorded on the acquisitions of Merchant Energy Group of the Americas, Vision Quest, and CE Gen. At Dec. 31, 2007, this goodwill had a total carrying value of \$124.9 million. The change in value from Dec. 31, 2006 is due to changes in foreign exchange rates.

We reviewed the recorded value of goodwill and determined that the fair values of our reporting units, based on historical cash flows and estimates of future cash flows, exceeded their carrying values and therefore no impairment charges were recorded.

Determining the fair value of the reporting units is susceptible to changes from period to period as management is required to make assumptions about future cash flows, production and trading volumes, margins and fuel and operating costs. Had assumptions been made that resulted in fair values of the reporting units declining by 10 per cent from current levels, there would not have been any impairment of goodwill.

Income Taxes

In accordance with Canadian GAAP, we use the liability method of accounting for future income taxes and provide future income taxes for all significant income tax temporary differences.

Preparation of the consolidated financial statements requires an estimate of income taxes in each of the jurisdictions in which we operate. The process involves an estimate of our current tax exposure and an assessment of temporary differences resulting from differing treatment of items, such as depreciation and amortization, for tax and accounting purposes. These differences result in future tax assets and liabilities that are included in our consolidated balance sheets.

An assessment must also be made to determine the likelihood that our future tax assets will be recovered from future taxable income. To the extent that recovery is not considered likely, a valuation allowance must be determined. Judgment is required in determining the provision for income taxes, future income tax assets and liabilities, and any related valuation allowance. To the extent a valuation allowance is created or revised, current period earnings will be affected.

Future tax assets of \$342.7 million have been recorded on the consolidated balance sheets at Dec. 31, 2007 (2006 \$319.8 million). These assets are comprised primarily of unrealized losses from risk management transactions, asset retirement obligation costs, and net operating

and capital loss carryforwards. We believe there will be sufficient taxable income and capital gains that will permit the use of these deductions and carryforwards in the tax jurisdictions where they exist.

Future tax liabilities of \$648.7 million have been recorded on the consolidated balance sheets at Dec. 31, 2007 (2006 \$718.5 million). These liabilities are comprised primarily of unrealized gains from risk management transactions and income tax deductions in excess of related depreciation of PP&E.

Judgment is required to assess continually changing tax interpretations, regulations and legislation, to ensure liabilities are complete and to ensure assets, net of valuation allowances, are realizable. The impact of different interpretations and applications could be material.

Our tax filings are subject to audit by taxation authorities. The outcome of some audits may change our tax liability, although we believe that we have adequately provided for income taxes based on all information currently available. The outcome of the audits is not known nor is the potential impact on the financial statements determinable.

Employee Future Benefits

We provide selected post-retirement benefits to employees. The cost of providing these benefits is dependent upon many factors that result from actual plan experience and assumptions of future experience.

The liability for future benefits and associated pension costs included in annual compensation expenses are impacted by employee demographics, including age, compensation levels, employment periods, the level of contributions made to the plans, and earnings on plan assets.

Changes to the provisions of the plans may also affect current and future pension costs. Pension costs may also be significantly impacted by changes in key actuarial assumptions, including anticipated rates of return on plan assets and the discount rates used in determining the projected benefit obligation and pension costs.

The plan assets are comprised primarily of equity and fixed income investments. Fluctuations in actual equity market returns and changes in interest rates may result in increased or decreased pension costs in future periods.

The discount rate used reflects high-quality fixed income securities currently available and expected to be available during the period to maturity of the pension benefits. We do not expect to make any changes to the rate in 2008.

The expected long-term rate of return on plan assets is based on past performance and economic forecasts for the types of investments held by the plan. For the year ended Dec. 31, 2007, the plan assets had a return of \$10.4 million compared to a return of \$35.5 million in 2006 and \$43.9 million in 2005. The 2007 actuarial valuation used the same rate of return on plan assets (seven per cent) as was used in 2006 and 2005.

Future Accounting Changes

Financial Instruments Disclosures and Presentation

On Dec. 1, 2006, the CICA issued two new accounting standards: Handbook Section 3862, *Financial Instruments Disclosures* and Handbook Section 3863, *Financial Instruments Presentation*. These new standards were effective on Jan. 1, 2008.

The new CICA Handbook Sections 3862 and 3863 replace Handbook Section 3861, *Financial Instruments Disclosure and Presentation*, revising and enhancing its disclosure requirements, and carrying forward unchanged its presentation requirements. These new sections place increased emphasis on disclosures about the nature and extent of risks arising from financial instruments and how the entity manages those risks.

International Financial Reporting Standards (IFRS)

On Feb. 13, 2008, the Accounting Standards Board of Canada (AcSB) announced that accounting standards in Canada are to converge with IFRS. The AcSB has confirmed that Canadian firms will need to begin reporting under IFRS by Jan. 1, 2011 with appropriate comparative data from the prior year. Under IFRS, the primary audience is capital markets and as a result, there is significantly more disclosure required, specifically for quarterly reporting. Further, while IFRS uses a conceptual framework similar to Canadian GAAP, there are significant differences in accounting policy that must be addressed.

On Dec. 31, 2007, the Securities and Exchange Commission approved rule amendments that will allow foreign private issuers to use financial statements without reconciliation to U.S. GAAP, if they are prepared using the English language version of IFRS as issued by the International Accounting Standards Board.

The impact of these new standards on our financial statements is currently being assessed.

Deferral of Costs and Internally Developed Intangibles

In November 2007, the AcSB approved Section 3064, *Goodwill and Intangible Assets*, replacing Section 3062, *Goodwill and Other Intangible Assets*, and Section 3450, *Research and Development Costs*. Section 3064 incorporates material from IAS 38, *Intangible Assets*, addressing when an internally developed intangible asset meets the criteria for recognition as an asset. The AcSB also approved amendments to Section 1000, *Financial Statement Concepts*, and Accounting Guideline AcG-11, *Enterprises in the Development Stage*. The amendments to AcG-11 provide consistency with Section 3064. EIC-27, *Revenues and Expenditures during the Pre-operating Period*, will not apply to entities that have adopted Section 3064. These changes are effective for us on Jan. 1, 2009, and the impact on our financial statements is currently being assessed.

Embedded Foreign Currency Derivatives

On Jan. 8, 2008, the CICA emerging issues committee issued EIC-169, *Determining whether a contract is routinely denominated in a single currency*. The EIC is intended to provide guidance on when an embedded foreign currency derivative would require bifurcation from a host contract. EIC-169 is effective for us on Jan. 1, 2008 with retrospective application, and is currently not anticipated to have a material impact on our financial statements.

Future Accounting Changes Early Adopted

Capital Disclosure

On Dec. 1, 2006, the CICA issued Handbook Section 1535, *Capital Disclosures*, which specifies the disclosure of (i) an entity's objectives, policies, and processes for managing capital; (ii) quantitative data about what the entity regards as capital; (iii) whether the entity has complied with any capital requirements; and (iv) if it has not complied, the consequences of such non-compliance. We have early adopted this standard. This standard did not have a material effect on our financial statements.

Inventories

In March 2007, the CICA issued Handbook Section 3031, *Inventories*, which aligns accounting for inventories under Canadian GAAP with IFRS. We have early adopted this standard. This standard did not have a material effect on our financial statements.

Non-GAAP Measures

We evaluate our performance and the performance of our business segments using a variety of measures. Those discussed below are not defined under GAAP and therefore should not be considered in isolation or as an alternative to or more meaningful than, net income or cash flow from operating activities as determined in accordance with GAAP as an indicator of the Corporation's financial performance or liquidity. These measures are not necessarily comparable to a similarly titled measure of another company.

Each business unit assumes responsibility for its operating results measured to gross margin and operating income. Operating income and gross margin provides management and investors with a measurement of operating performance that is readily comparable from period to period.

Gross margin and operating income are reconciled to net earnings below:

Year ended Dec. 31	2007	2006	2005
--------------------	------	------	------

Edgar Filing: TRANSALTA CORP - Form 40-F

Gross margin	\$	1,544.0	\$	1,491.4	\$	1,442.0
Operating expenses		(1,002.9)		(1,012.9)		(985.2)
Operating income before mine closure and asset impairment charges		541.1		478.5		456.8
Mine closure charges				(191.9)		
Asset impairment charges				(130.0)		(36.2)
Operating income		541.1		156.6		420.6
Foreign exchange (loss) gain		3.2
