Vodafone Group Plc

01 February 2019

VODAFONE GROUP PLC
TOTAL VOTING RIGHTS AND CAPITAL

In conformity with Disclosure Guidance and Transparency Rule 5.6.1R, Vodafone Group Plc (Vodafone) hereby notifies the market that, as at 31 January 2019:

Vodafone s issued share capital consists of 28,815,252,478 ordinary shares of US\$0.20/21 of which 2,094,856,442 ordinary shares are held in Treasury.

Therefore, the total number of voting rights in Vodafone is 26,720,396,036. This figure may be used by shareholders as the denominator for the calculations by which they will determine if they are required to notify their interest in, or a change to their interest in, Vodafone under the FCA s Disclosure Guidance and Transparency Rules.

This announcement does not constitute, or form part of, an offer or any solicitation of an offer for securities in any jurisdiction.

END

VODAFONE COMPLETES WORLD'S FIRST CONNECTION OF 5G SMARTPHONES TO ITS NETWORK

- **First commercial 5G smartphone trials in Madrid and Barcelona ahead of Mobile World Congress.**
- **Vodafone's mobile network in Europe is ready to be upgraded to 5G as the operator prepares for 2019 launch in major European cities.**
- **5G network delivering 1.5 Gigabits per second (Gbps) download speeds in Barcelona will be showcased during Mobile World Congress.**

Mobile World Congress, 20 February 2019 - Vodafone has become the world's first operator to connect 5G smartphones to its live 5G network. Vodafone is preparing to launch 5G in a number of European cities during the second half of 2019.

Vodafone has successfully completed trials over a four-week period with three 5G smartphones that will be launched in 2019.

Vodafone was able to make a seamless 4K video call on its network during the trial, utilising 5G download speeds that will be up to 10 times faster than 4G is today.

Both the smartphones and Vodafone's 5G network were fully compliant with the latest version of the industry standard for Non-Standalone 5G - 3GPP's Release 15, which was only approved in December 2018.

Edgar Filing: VODAFONE GROUP PUBLIC LTD CO - Form 6-K

Vodafone has already rolled out a 5G network in the city centre of Barcelona. During Mobile World Congress, which starts on 25 February, a car will drive around the city streets measuring and reporting the 1.5Gbps speeds that the network is already delivering.

Vodafone is ready to launch 5G in a number of European cities during the second half of 2019.

Edgar Filing: VODAFONE GROUP PUBLIC LTD CO - Form 6-K

Vodafone has invested in single Radio Access Network technology across 98% of its European 4G footprint. That will make it much simpler for Vodafone to add 5G on top of its existing 4G network in future. Additionally, Vodafone has been participating in 5G spectrum auctions in its European operating markets. More than two-thirds of Vodafone's single RAN sites within major European cities already have sufficient backhaul to support 5G network speeds.

Vodafone has also been trialling 5G technology in its major European markets:

- Vodafone has invested €90 million in Milan to build the first 5G network in Italy, covering over 80% of the city. It has launched 31 5G use cases to date working with 38 industrial and public sector partners. The use cases cover the fields of health and wellbeing; security and surveillance; smart energy and smart cities; mobility and transport; manufacturing and industry 4.0; education; entertainment; and the digital divide. The use cases include a 5G Connected Ambulance developed with San Raffaele hospital; Europe's first live 5G news broadcast with Sky; and a self-driving robotic vehicle delivering books at the Polytechnic University of Milan campus. Vodafone has also allocated €10 million over four years for the Action for 5G competition for start-ups, SMEs and social businesses.
- Vodafone UK is trialling 5G in seven cities and successfully completed the country's first holographic call in September 2018 when England and Manchester City Women's Captain, Steph Houghton MBE who broadcast from Manchester to Vodafone's headquarters in Newbury, Berkshire in order to give footballing tips to 11-year-old Manchester City and Lionesses fan, Iris.
- Vodafone Germany won the international Paul Pietsch Award in 2019 for its work in making the 5G standard fit for connected and autonomous driving in future utilising its 5G Mobility Lab and auto test track near Dusseldorf. It is now working with German broadcaster WDR to test the distribution of TV and Video on Demand content over 5G.
- Vodafone Spain, which completed the world's first 5G call at Mobile World Congress in 2018, has 5G cell sites across six cities. The company is also supporting the development of 5G connected surgery in Spain working with L'Hospital Clinic in Barcelona to enable a specialist surgeon to guide an operation by another surgeon without being physically present.

Johan Wibergh, Chief Technology Officer of Vodafone Group, said:

Vodafone's networks are increasingly ready for 5G, which will enable us to deliver significant benefits over time for consumers, businesses and society. Our focus now is on optimising the customer experience before we launch 5G in some European cities later this year.

VODAFONE S SUPER WIFI BANISHES BROADBAND BLACKSPOTS

Mobile World Congress Thursday 21 February 2019 Vodafone today announced the launch of Super WiFi, a smart home network that delivers a fast, reliable, Wi-Fi signal to every corner of the home. Super WiFi uses easy-to-install small extenders, strategically placed throughout the house, to deliver a consistent signal in every room. Depending on the size of the house, up to three extenders should ensure that everyone can do exactly what they want to do online, wherever they want, whenever they want.

Unlike standalone plug-ins available on the high street, the Super WiFi network is managed by the cloud. This means the extenders connect seamlessly and simply to Vodafone s home broadband router, creating a smart, dynamic network that adjusts automatically to deliver the best possible connection to each type of device, whether it is a mobile, laptop or connected TV. Cloud-based self-learning algorithms means the network is constantly improving over time, and able to respond to internal and external changes. Not only can it switch between channels to deliver the strongest available signal, it is also able to detect electronic interference from other devices and adapt to compensate.

The smart network can be monitored and controlled through the Super WiFi app, and it is also able to identify and solve the most common Wi-Fi problems that may arise with Vodafone s customer care team available to tackle any remaining issues remotely.

Ahmed Essam, Vodafone Group s Chief Commercial and Strategy Officer, said: We know that the vast majority of people s broadband issues are actually down to poor Wi-Fi signals in their homes around a quarter of calls into customer care are about Wi-Fi issues. Super WiFi is a simple way to address these problems and give our customers the best possible connection in every room of their house, every day of the week.

Over three-quarters of European families in a recent survey¹ reported Wi-Fi related issues in their home. Broadband speeds into the home may be getting faster, but many users still have problems with buffering, latency and download speeds. This is partly because of the increasing number of devices in the average household, along with the fact that thick internal walls or interference from other electronic equipment can weaken or even completely block the Wi-Fi signal from the router. Of those who took part in the survey, a third (33%) of customers claimed that their Wi-Fi was slower in some rooms than others, while 28% had difficulty in

establishing a connection in some places in the house all together.

Edgar Filing: VODAFONE GROUP PUBLIC LTD CO - Form 6-K

Super WiFi will be available from Vodafone Spain in the next few weeks, and will roll out across other major European markets over the summer. Vodafone currently has approximately 21 million fixed broadband customers.

¹ Research carried out by Bryter for Vodafone, surveying 3,000 customers in 10 European markets

- ends -

Notes to Editors

Vodafone will be showcasing Super WiFi at Mobile World Congress in Barcelona from Monday 25 Thursday 28 February. The Vodafone Group stand will be in Hall 3, 3D 30.

VODAFONE ITALIA AND TELECOM ITALIA INTEND TO ENTER INTO A NEW NETWORK SHARING PARTNERSHIP

- Vodafone Italia (Vodafone) and Telecom Italia Group (TIM) (together, the Parties) intend to enter into an active network sharing partnership for 5G, to consider active sharing for 4G and to expand their existing passive sharing agreement to enable faster deployment of 5G over a wider geographic area at a lower cost
- The Parties intend to co-operate on the upgrade of their respective fibre transmission networks for mobile backhaul
- The Parties intend to evaluate the combination of their 22,000 passive towers in Italy into a single entity
- The Parties have signed an MoU and agreed to enter into exclusive discussions

Vodafone and TIM announced today that they have signed a Memorandum of Understanding (MoU) outlining non-binding terms in relation to a potential partnership for active network sharing (the Active Sharing Project) and an expansion of their existing passive sharing agreement (the Passive Sharing Agreement).

The Parties are also evaluating the feasibility and merits of a potential business combination of their respective passive towers located in Italy into a single entity (the Potential Business Combination , jointly with the Active Sharing Project and the Passive Sharing Agreement, the Initiatives).

To facilitate the discussions around the Initiatives, Vodafone and TIM have entered into an exclusivity agreement.

With reference to the Active Sharing Project, Vodafone and TIM intend to enter into an agreement that would enable them to jointly roll-out 5G infrastructure. The Active Sharing Project would support a faster deployment of 5G over a wider geographic area, at a lower cost. The Parties will evaluate the technical and commercial feasibility of jointly deploying active 5G equipment across the country, including certain larger cities where each party may wish to retain strategic flexibility and ensure that they are able to meet the needs of their respective customers.

Vodafone and TIM also intend to consider active network sharing for their existing 4G networks, in order to support 5G active network sharing; this may also generate further efficiencies. Furthermore, Vodafone and TIM intend to upgrade their respective mobile transmission networks, adding higher capacity optical fibre cables (Fiber-to-the-Site or backhauling). This would enable customers to benefit from 5G's new features, such as faster speeds and low latency, as well as provide both companies with greater economies of scale.

Edgar Filing: VODAFONE GROUP PUBLIC LTD CO - Form 6-K

The Parties intend to extend the existing Passive Sharing Agreement, from approximately 10,000 sites today (approximately 45% of the Parties' combined passive towers), to a nationwide agreement. The objective is to accelerate and enhance the deployment of 5G technology and use network infrastructure more efficiently, both in urban and rural areas.

With reference to the Potential Business Combination, Vodafone and TIM have also agreed to explore a potential transaction that would entail the Parties consolidating their c. 22,000 passive towers located in Italy into a single entity, potentially combining Vodafone's passive tower infrastructure with the infrastructure of Inwit SpA, the 60%-owned and publicly listed tower subsidiary of TIM. Any such combination would be structured in a way that would be expected to be value accretive to all the parties involved. Over time, the Parties intend to explore opportunities to move active network equipment that is currently hosted on 3rd party towers to the infrastructure of the new company, wherever possible. The potential enlarged tower infrastructure would continue to seek to increase 3rd party tenancies to generate efficiencies.

The Potential Business Combination is intended to: (i) leave both Parties with equal shareholdings and governance rights in Inwit SpA, and (ii) ensure that there is no obligation for the Parties to launch a tender offer for Inwit's shares.

The entire initiative is intended to promote healthy competition in the sector and facilitate an open environment for 5G development.

The Initiatives have been set out in the MoU and are subject to the Parties entering into legally binding agreements and receiving all necessary regulatory approvals.

Vodafone and TIM aim to conclude one or more of the Initiatives during 2019.

Aldo Bisio, CEO of Vodafone Italia, said: This partnership will allow us to generate significant benefits for our customers and other stakeholders, who will be able to enjoy the best 5G experience, made available in a shorter period of time and across a wider geographical area. 5G represents a technological breakthrough that will have a profound impact on society, and that requires investment, efficiency and a rapid rollout. This has led us to broaden the scope of our existing successful partnership.

Luigi Gubitosi, CEO, TIM, said: This partnership will allow our customers to enter the 5G revolution faster and deeper, while at the same time making the best use of both companies' resources. We believe that network sharing is key to do more, effectively and better for the benefit of our clients and all stakeholders, in view of the process of change that will be triggered by the launch of 5G in the years to come and that will be paramount for the development and digitalization of our Country .

AT&T and Vodafone Business Team Up to Drive Internet of Things (IoT) Connectivity in the Automotive Industry

Collaboration will enhance safety, security and entertainment solutions for multi-national automakers

BARCELONA, February 25, 2019 AT&T* and Vodafone Business are working together to accelerate Internet of Things (IoT) connectivity and innovation in the automotive industry. The companies will bring together their industry-leading expertise to develop superior and consistent connected car solutions and experiences for customers across their combined footprints in North America, Europe and Africa.

Automotive companies face many challenges when deploying connected car solutions across countries. Each market has unique requirements and regulations, and it can be complicated for automakers to work across multiple network operators and vendors.

AT&T and Vodafone Business understand the complexity of global deployments and aim to address these challenges. The goal is to simplify the deployment process, improve operations, deliver innovative solutions, and make the network certification process easier.

This alliance with Vodafone Business is a natural extension of our existing relationship, said Chris Penrose, President, Internet of Things Solutions, AT&T. We each have rich experience in connected vehicle technology. By working together, we can innovate faster and help our global customers bring connectivity, entertainment and telematics to more vehicles across our respective footprints.

Our work with AT&T will benefit automotive manufacturers and their customers around the world as we simplify processes and provide a consistent experience to accelerate IoT adoption in this fast-moving market, said Stefano Gastaut, IoT Director, Vodafone Business. As technology complexity increases, this is the right time to make technology adoption easier for the automotive industry to help them achieve their business outcomes. This is the goal of this alliance.

The companies will prioritise projects to enhance safety, security and entertainment capabilities. Key areas of focus will be:

- 5G and autonomous vehicle technology
- V2X capabilities (vehicle-to-everything)
- In-vehicle entertainment
- Connected car applications and services
- Global service quality models
- Connected car/ smart cities intersection

AT&T and Vodafone Business each provide connected car services and products for the automotive, fleet and insurance industries. They integrate electronic and telematics systems into complex vehicles, both at the point of manufacture and beyond. Together, the companies bring more than 50 years of experience in the automotive industry. And they collectively work with nearly 50 global automotive brands and connect more than 43 million cars and trucks on the road today.

AT&T and Vodafone also are pioneering the future of transportation and autonomous driving:

- **Alliances:** AT&T and Vodafone are board members of the 5GAA, a global, cross-industry organisation of companies from the automotive, technology and telecoms industries, working together to develop end-to-end solutions for future vehicular mobility and transportation services.
- **V2X:** Vodafone has been testing C-V2X (Cellular-vehicle-to-everything) in Germany for the past two years, integrating C-V2X with adaptive cruise control, a driver assistance system that warns the driver about something happening on the road, and also automatically accelerates or brakes in response. These trials pave the way for autonomous driving.
- **Testing Facilities:** In Germany, Vodafone has opened a 5G lab and test track to work with automotive companies to develop new transport innovations utilising 5G. AT&T is a founding member and exclusive connectivity provider of the American Center for Mobility, an advanced automotive development proving ground near Detroit, Michigan.
- **Safety:** AT&T is a founding member of Together for Safer Roads – a coalition of global, private sector companies focused on improving road safety and reducing deaths and injuries from car accidents.

For more information, check out the connected car pages for [AT&T](#) and [Vodafone Business](#).

*About AT&T Communications

25 February 2019

**Arm and Vodafone commit to work together to simplify
Internet of Things (IoT) deployment**

Agreement combines iSIM, IoT software and network services to dramatically reduce complexity and enable fully open, remote provisioning of IoT devices.

Barcelona, Spain 25 February, 2019 Arm and Vodafone today announced a strategic agreement that will significantly reduce complexity and costs faced by organisations when implementing Internet of Things (IoT) solutions. Expanding on the companies' previous collaboration around integrated SIM (iSIM) technology, this partnership brings together Vodafone IoT global platform and connectivity, and Arm's IoT software and services to provide enterprises with programmable, connected system on chip designs that eliminate the need for traditional SIM cards. This allows customers to securely deploy, remotely provision and manage massive numbers of IoT devices across global markets at a significantly lower cost and complexity.

Fragmentation, security and cost are three limiting factors in IoT, and we believe a strong partner ecosystem is critical in solving these challenges, said Dipesh Patel, president, IoT Services Group. This partnership will enable global enterprises to significantly reduce the cost and complexity of securely connecting their IoT devices at scale so that they can quickly drive real value and actionable insights from their IoT data through our Pelion IoT platform.

Vodafone has been focused on building its global IoT platform & connectivity, to enable the fast deployment of IoT services, said Stefano Gastaut, IoT Director, Vodafone. Working together with Arm, we will combine the strengths of both companies to benefit our customers and break down the barriers, such as cost and complexity, which are hindering the adoption of IoT for many.

This strategic partnership between Arm and Vodafone enables remote provisioning for devices using Narrow Band-IoT (NB-IoT) and Long Term Evolution for Machines (LTE-M) technologies and provides secure, open, standards-based deployment to any application and service provider across the globe. Arm's iSIM provides anyone deploying IoT devices globally with the means to develop and deploy a single IoT product that can be shipped and connected anywhere in the world. Vodafone's global IoT network enables organizations to connect IoT devices across the broadest global footprint through the Vodafone IoT platform or the Pelion IoT platform.

Edgar Filing: VODAFONE GROUP PUBLIC LTD CO - Form 6-K

Arm and Vodafone's leadership in NB-IoT and LTE-M technologies will unleash the potential of IoT by massively broadening the range of objects that can be connected and unlocking business and societal value. For example, using data from sensors on connected devices will help address challenges in feeding the earth's growing population by improving yields of agriculture and livestock and reducing chemical and water use. This will also help utilities to more efficiently manage scarce resources such as water, gas and electricity and reduce carbon emissions.

This represents a major step towards enabling a wide ecosystem of device makers that will help businesses to tap into the potential of a trillion connected devices by 2035 and access the vast amount data they provide to drive better business outcomes. Joint solutions from Arm and Vodafone will be available in the first quarter of calendar year 2020.

About Arm

Arm technology is at the heart of a computing and connectivity revolution that is transforming the way people live and businesses operate. Our advanced, energy-efficient processor designs have enabled intelligent computing in more than 130 billion chips. More than 70% of the world's population are using Arm technology, which is securely powering products from the sensor to the smartphone to the supercomputer. This technology combined with our IoT software and end-to-end connectivity, device and data management platform enables customers to derive real business value from their connected devices and data. Together with our 1,000+ technology partners we are at the forefront of designing, securing and managing all areas of compute from the chip to the cloud.
