Item 2.05 Costs Associated with Exit or Disposal of Activities

On September 14, 2004, Kerr-McGee Corporation approved plans to shut down its titanium dioxide pigment sulfate production at its Savannah, Georgia facility by the end of September 2004. The company also plans to end production at the Savannah gypsum plant that uses

by-product from the sulfate process to manufacture gypsum. The Savannah facility's workforce of 410 will be reduced by approximately 100 positions. In addition, the facility will decrease its daily contractor workforce by approximately 40 positions.

Demand and prices for sulfate anatase pigments, particularly in the paper market, have declined in North America consistently during the past several years. The decreasing volumes, along with unanticipated environmental and infrastructure issues discovered when Kerr-McGee acquired the facility in 2000, created unacceptable financial returns for the Savannah sulfate facility and contributed to the decision.

Kerr-McGee expects to recognize the following charges related to its Savannah pigment facilities, which include charges related to the shut down of the sulfate facility as well as charges unrelated to the shut down:

Description	Third Quarter 2004	Total Expected Charges
Charges associated with shut down: \$ in millions		
Write-down of property, plant and equipment and intangible assets	\$ 67 - \$ 70	\$ 67 - \$ 70

	-----	-----
Total costs associated with shut down	105 - 112	107 - 124
