3. Reasons

As a result of the significant decrease in crude oil prices in the international market, the Group's crude oil processing costs dropped gradually in recent months. Since 1 January 2009, the State has implemented an improved pricing mechanism for refined oil products, thus bringing the inverted prices of refined oil products with those of crude oil to an end at the prevailing market prices of crude oil, and consequently improving the profitability of the oil refining operation. In relation to the petrochemical operation, after the panic sell-off and sharp decrease in prices of products triggered by the financial crisis, it has bottomed out and re-stabilized, with prices of certain products having risen to a certain extent. Meanwhile, the load of the relevant petrochemical plants of the Company has increased. The Group will record a profit in terms of its net profit attributable to equity shareholders of the Company for the first quarter ended 31 March 2009.

4. Explanation on other situations

The impact of the financial crisis will continue to persist and spread and there has been no sign of a revival of the global economy yet. Investors are advised to pay attention to the risks involved in the investment in the Company's securities.
