Explanatory Note

This Annual Report on Form 10-K is a combined report being filed separately by three registrants: SunGard Capital Corp. (SCC), SunGard Capital Corp. II (SCCII) and SunGard Data Systems Inc. (SunGard). SCC and SCCII are collectively referred to as the Parent Companies. Unless the context indicates otherwise, any reference in this report to the Company, we, us and our refer to the Parent Companies together with their direct and indirect subsidiaries, including SunGard. Each registrant hereto is filing on its own behalf all of the information contained in this annual report that relates to such registrant. Each registrant hereto is not filing any information that does not relate to such registrant, and therefore makes no representation as to any such information.

Forward-Looking Statements

Certain of the matters we discuss in this Report on Form 10-K may constitute forward-looking statements. You can identify forward-looking statements because they contain words such as believes, expects, may, will, should, seeks, approximately, intends, plans, estimates, anticipates or similar expressions which concern our strategy, plans or intentions. These forward-looking statements are subject to risks and uncertainties that may change at any time, and, therefore, our actual results may differ materially from those we expected. We describe some of the factors that we believe could affect our results in ITEM 1A RISK FACTORS. We assume no obligation to update any written or oral forward-looking statements made by us or on our behalf as a result of new information, future events or other factors.

PART I

ITEM 1. BUSINESS
Who We Are

We are one of the world's leading software and technology services companies. We provide software and technology services to financial services, higher education and public sector organizations. We also provide disaster recovery services, managed services, information availability consulting services and business continuity management software. We serve more than 25,000 customers in more than 70 countries. Our high quality software solutions, excellent customer support and specialized technology services result in strong customer retention rates across all of our business segments and create long-term customer relationships. We believe that we are one of the most efficient operators of mission-critical IT solutions as a result of the economies of scale we derive from serving multiple customers on shared processing platforms.

We have four business segments: Financial Systems (FS), Higher Education (HE), Public Sector (PS) and Availability Services (AS).

FS provides mission-critical software and technology services to virtually every type of financial services institution, including buy-side and sell-side institutions, third-party administrators, wealth managers, retail banks, insurance companies, corporate treasuries and energy trading firms. Our broad range of complementary software solutions and associated technology services help financial services institutions automate the business processes associated with trading, managing portfolios and accounting for investment assets.

Table of Contents

HE provides software and technology services primarily to colleges and universities as well as to school districts. Education institutions rely on our broad portfolio of solutions and technology services to improve the way they teach, learn, manage and connect with their constituents.

PS provides software and technology services designed to meet the specialized needs of local, state and federal governments, public safety and justice agencies, utilities and other public sector institutions as well as nonprofits.

AS provides disaster recovery services, managed services, information availability consulting services and business continuity management software to 10,000 customers in North America and Europe. With five million square feet of data center and operations space, AS assists IT organizations across virtually all industry and government sectors to prepare for and recover from emergencies by helping them minimize their computer downtime and optimize their uptime. Through direct sales and channel partners, AS helps organizations ensure their people and customers have uninterrupted access to the information systems they need in order to do business.

We were acquired in August 2005 in a leveraged buy-out (LBO) by a consortium of private equity investment funds associated with Bain Capital Partners, The Blackstone Group, Goldman, Sachs & Co., Kohlberg Kravis Roberts & Co., Providence Equity Partners, Silver Lake and TPG. As a result of the LBO, we are highly leveraged and our equity is not publicly traded.

Our Sponsors continually evaluate various strategic alternatives with respect to the Company, including a potential spin-off of the AS business to our current equity holders. We expect that if we were to spin-off any business segment, that business segment would incur new debt and we would repay a portion of our existing indebtedness. Additionally, it is possible that along with any spin-off, we would receive cash proceeds from an issuance of equity of one of our Parent Companies. There can be no assurance that we will ultimately pursue any strategic alternatives with respect to any business segment, including AS, or an equity issuance or, if we do, what the structure or timing for any such transaction would be.

To the extent required by ITEM 1 of Form 10-K, financial information regarding our business segments is included in Note 12 to our Consolidated Financial Statements on page 100.

Our Strengths

Leading franchise, attractive industry dynamics and global expansion opportunities. We believe that our businesses have leading positions and strong customer relationships in industries with attractive growth prospects and significant opportunities for global expansion.

Leading industry positions. We believe that our FS business is a leader in the sectors in which it participates within the highly fragmented global market for financial services software and technology services. We believe that our HE and PS businesses are both leading providers of software and technology services to education institutions and the public sector, respectively, and that AS is the pioneer and a leading provider in the information availability services industry. We believe that our strong customer relationships in the highly fragmented software and technology services sectors that we serve help us to maintain leading positions. Our customers use our solutions to manage their most mission-critical business processes, which we believe results in high switching costs that promote the retention of our solutions, provide opportunities to sell additional software and technology services, and create barriers to entry for other vendors. We believe that these factors provide us with competitive advantages that should enhance our growth potential.

Table of Contents

Attractive industry dynamics. We believe that over the long term each of our primary business segments has good growth potential. We believe that our FS business will benefit from several key industry dynamics: the general increase in IT spending associated with increasing compliance, regulatory and risk management requirements; the shift from internal to outsourced IT spending; and an increasing need of our customers for real time information. We anticipate that our HE business will benefit from key trends in education: investment in higher education as an essential driver of economic growth; the growing emphasis within education on performance management and data-driven decision making; the ongoing transformation of education by online and mobile technologies; and the global demand for both higher education and lifelong learning. We believe that our AS business will continue to benefit from the increasing criticality of IT availability to support day-to-day business operations and commerce. We believe that our strong relationships with our customers in the relatively fragmented software and processing sectors that we serve and our extensive experience and the significant total capital that we have invested in AS help us to maintain leading positions. We believe that these factors should provide us with competitive advantages and enhance our growth potential.

Global opportunities. We believe that our FS, HE and AS businesses will benefit from the growth in developing economies in Asia Pacific and Latin America. As financial services practices evolve and mature in these developing economies, we believe that local institutions will look to leading global software and technology services providers with deep domain expertise, a suite of proven software capabilities and a local presence to provide implementation and support. We believe that our largest customers that seek to expand their businesses around the world seek to enhance efficiency by scaling their software and processing platforms globally. We believe that our industry footprint, global delivery capabilities and suite of solutions will provide us a competitive advantage.

Highly attractive business model. We have substantial recurring revenue, maintain a diversified and stable customer base and generate significant operating cash flow.

Extensive portfolio of software and technology services across our businesses with substantial recurring revenue. With a large portfolio of proprietary products and services in each of our four business segments, we have a diversified and stable business. With the exception of our broker/dealer business, we believe that our FS revenue is more insulated from changes in trading and transaction volumes than the financial services industry at large because our FS customers generally pay us monthly fees that are based on metrics such as number of accounts, trades or transactions, users or number of hours of service. Our portfolio of solutions and the largely recurring nature of our revenue across all four of our segments have reduced volatility in our revenue and operating income. Moreover, our specialized technology services and customized solutions help support and automate our customers' mission-critical business processes and help increase the level of efficiency for our customers, which we believe reduces customer defections to other vendors or to in-house solutions.

Diversified and stable customer base. Our base of more than 25,000 customers includes most of the world's largest financial services firms, a variety of other financial services firms, corporate and government treasury departments, energy companies, higher education institutions, school districts, local governments and not-for-profit organizations. Our AS business serves customers across virtually all industries. In addition, our track record of helping our customers improve their operational efficiency, achieve high levels of availability and address regulatory requirements results in stable, long-term customer relationships. Our

Table of Contents

revenue is highly diversified by customer and product. During each of the past three fiscal years, no single customer has accounted for more than 10% of total revenue. On average for the past three fiscal years, services revenue has been approximately 90% of total revenue. About 70% of services revenue is highly recurring as a result of multiyear contracts and is generated from (1) software-related services including software maintenance and support, processing and rentals and (2) recovery and managed services. The remaining services revenue includes (1) professional services, which are recurring in nature as a result of long-term customer relationships, and (2) broker/dealer fees, which are largely correlated with trading volumes.

Significant operating cash flow generation. We are able to generate significant operating cash flows because of our strong operating margins. Our strong and predictable cash flow allows us to meet our significant debt-service requirements and make discretionary investments to grow the business, both by investing in new products and services and through acquisitions.

Experienced management team with track record of success with proper incentives. Our management team has a long track record of operational excellence, has a proven ability to expand our business by adding new solutions through both internal development and the acquisition and integration of complementary businesses, and is highly committed to our Company's growth.

Long track record of operational excellence at a large scale. Our experienced management team has proven capabilities in both running a global business and managing numerous applications that are important to our customers. Under their leadership, our businesses have expanded into new geographic markets, invested in developing new solutions and enhancing our technology services, met stringent customer and industry requirements and successfully incorporated new acquisitions. Our FS solutions support over 14,000 customers and process over ten million transactions per day. In our HE business, more than 1,800 organizations including colleges, universities, campuses, foundations and state systems use our solutions to serve more than 14 million students worldwide. Our PS products are used by agencies that serve more than 115 million citizens in North America. Our AS business is the pioneer and a leading provider in the information availability services industry and has 10,000 customers.

Experienced management team with appropriate incentives. Our executive officers have on average more than 15 years of industry experience. As part of the LBO, many of our senior managers committed significant personal capital to our Company.

Our Business Strategy

We are focused on expanding our position not only as a leading provider of software and technology services for financial services, higher education and public sector organizations, but also as the provider of choice for a wide range of information availability services and managed services for IT departments in companies across virtually all industries. Our strategy is to leverage our extensive customer base, deep domain knowledge and understanding of how to apply technology to support mission-critical business processes to produce innovative products and services. In pursuing expansion of our business, we emphasize fiscal discipline, sustainable revenue growth, improving margins and significant operating cash flow generation. The following are key objectives of our growth strategy:

Table of Contents

Expand our industry-leading franchise. We constantly enhance our product and service offerings across our portfolio of businesses, leverage our customer relationships, and look to acquire complementary businesses at attractive valuations.

Enhance our products and expand our technology services. We continually support, upgrade and enhance our products to incorporate new technologies, meet the needs of our customers for increased operational efficiency and comply with new industry regulations and requirements. Our strong base of recurring revenue drives high operating margins that allow us to reinvest in our products and technology services. In 2010 and 2009, product development expenses were 10% and 9%, respectively, of our revenue from software and processing solutions. We have invested in building a global services organization comprising more than 5,000 consultants and developers with deep domain expertise to help customers develop, deploy and operate software solutions wherever and however they do business. We believe that our ability to offer a broad range of technology services including advisory services, systems integration, application development and managed services will help increase customer satisfaction as well as our share of the total IT budget of our customers.

Innovate to provide new solutions. We continue to introduce innovative products and services in all four of our business segments. Since the LBO in 2005, we have been able to invest in strategic growth initiatives to balance short-term and long-term growth. These initiatives have included launching Infinity, a software-as-a-service (SaaS) initiative that offers financial services institutions a software development environment, business process management (BPM) platform and on-demand SaaS components. In our HE business, we launched Open Digital Campus, an open-source initiative that brings together our extensive user community in order to accelerate the availability of functionality. In our PS business, we launched ONESolution, a software suite that enables local government agencies to access information and share data through mobile computer, computer-aided dispatch and Internet technologies. In our AS business, we launched enterprise cloud computing, which will help customers tap into the efficiency and cost advantages of a fully managed cloud environment with enterprise-grade application availability and security. We believe that our focus on innovation will help us increase our penetration of new and existing market sectors.

Automate key financial services industry transaction and information flows. We help our FS customers automate their mission-critical business processes internally and between their counterparties and trading partners by providing a network and technology infrastructure. Our global transaction network helps financial services institutions address the connectivity challenges of trading new instruments and accessing new trading venues worldwide. Our financial management network helps corporations drive maximum value from working capital and reduce risk by automating their interactions with their trading partners, suppliers and banks. We believe that by continuing to link organizations across their business ecosystem we will help strengthen our position as a leading provider of mission-critical software and technology services to the financial services industry.

Deepen our customer relationships. We focus on developing mutually beneficial, long-term relationships with our customers. We look to maximize cross-selling opportunities, bundle solutions and maintain a high level of customer satisfaction. Our FS global account management program allows us to gain access to senior decision makers, maintain account control and better target potential cross-selling and new business opportunities.

Table of Contents

Expand in emerging countries with high growth rates for software and technology services. We seek to grow our business in developing economies including China, India and Brazil, where there is growing demand for software and technology services from the sectors we serve. We have established our presence in these and other emerging countries by investing in local sales, marketing and support personnel, by customizing our products to meet the needs of the market and by acquiring businesses.

Acquire and integrate complementary businesses. We seek to acquire businesses that complement our existing product and technology service offerings, expand our footprint in new markets and strengthen our leadership positions, and that will provide us with a suitable return on investment. We have a highly disciplined program to identify, evaluate and integrate acquisitions. Before committing to an acquisition, we devote significant resources to due diligence and to developing post acquisition integration plans, including the identification and quantification of potential cost savings and synergies. Since 1986, we have successfully completed the acquisition of over 175 businesses. We believe that our acquisition program has contributed significantly to our long-term growth and success.

Focus on increasing recurring revenue and implementing operational improvements. We continue to focus on increasing our recurring revenue base and implementing incremental operational improvements.

Increase our recurring revenue base. We strive to generate a high level of recurring revenue and stable cash flow from operations. We charge customers monthly subscription fees under multiyear contracts and will continue to pursue these types of arrangements because they offer high levels of revenue stability and visibility. We seek to renew existing contracts with multiyear terms, add new services and capabilities that produce recurring revenues and shift our mix of new business from on-premise software to software-as-a-service based on a subscription model.

Implement incremental operational improvements. We continue to implement operational improvements to further increase revenue, reduce costs and improve cash flow from operations. These include expanding the global account management program within FS to include large regional institutions, capitalizing on our global services organization to offer a broader range of services to our customers, implementing new SaaS solutions to help accelerate time-to-market and serve new markets, and continuing to consolidate data centers within FS. Within AS, numerous initiatives are underway or have been recently completed that will streamline our direct sales model, increase the level of automation within the service delivery process, and maximize our return on investments in data center personnel and facility space.

Business Segment Overview

What We Do

Financial Systems

FS provides mission critical software and technology services to financial services institutions, corporate and government treasury departments and energy companies. Our solutions automate the many complex business processes associated primarily with trading, managing investment portfolios and accounting for investment assets, and also address the processing requirements of a broad range of users within the financial services sector. In addition, we provide technology services that focus on application implementation and integration of these solutions, custom software development and

Table of Contents

application management. Since our inception, we have consistently enhanced our solutions to add new features, process new types of financial instruments, meet new regulatory requirements, incorporate new technologies and meet evolving customer needs.

We deliver many of our solutions as an application-service provider, primarily from our data centers located in North America and Europe that customers access through the Internet or virtual private networks. We also deliver some of our solutions by licensing the software to customers for use on their own computers and premises.

Our FS business offers software and technology services to a broad range of users, including asset managers, chief financial officers, compliance officers, custodians, fund administrators, insurers and reinsurers, market makers, plan administrators, registered investment advisors, treasurers, traders and wealth managers. Effective January 1, 2011, we realigned our FS businesses to better serve the needs of our customers. To provide our solutions, FS is grouped into businesses that focus on the specific requirements of our customers, as follows:

Asset Management: We offer solutions that help institutional investors, hedge funds, private equity firms, fund administrators and securities transfer agents improve both investment decision-making and operational efficiency, while managing risk and increasing transparency. Our solutions support every stage of the investment process, from research and portfolio management, to valuation, risk management, compliance, investment accounting, transfer agency and client reporting.

Banking: We provide banks with an integrated solution suite for asset/liability management, budgeting and planning, regulatory compliance and profitability. Our solutions also manage all aspects of universal banking including back-office transaction processing, front-office multichannel delivery, card management and payments.

Corporate Liquidity: Our solutions for corporate liquidity help businesses facilitate connectivity between their buyers, suppliers, banks, data providers and other stakeholders to increase visibility of cash, improve communication and response time, reduce risk, and help drive maximum value from working capital. Our end-to-end collaborative financial management framework helps chief financial officers and treasurers bring together receivables, treasury and payments for a single view of cash and risk, and to optimize business processes for enhanced liquidity management.

Global Trading: Our global trading solutions help buy- and sell-side firms achieve increased performance, low latency and execution across multiple platforms, asset classes and markets. We provide equities, futures, fixed income, options and energy traders with trading, risk management, compliance and surveillance solutions. Linking buy-side firms to brokers, we provide access to liquidity pools as well as order management, advanced execution and smart order routing.

Insurance: We provide solutions for the insurance industry in each of the following major business lines: life and health, annuities and pensions, property and casualty, reinsurance and asset management. Our software and services support functions from the front office through the back office, from customer service, policy administration and actuarial calculations to financial and investment accounting and reporting.

Position, Risk & Operations: Our solutions for position, risk and operations help banks, broker/dealers and futures commission merchants increase the efficiency and transparency of securities and derivatives processing. Our solutions also provide accounting, securities financing, data management and tax reporting across multiple platforms, asset classes and markets. Supporting

Table of Contents

the entire trade lifecycle from execution to settlement, we provide centralized transactional databases that deliver consolidated views of positions and risk.

Wealth Management: We provide wealth management solutions that help banks, trust companies, brokerage firms, insurance firms, benefit administrators and independent advisors acquire, service and grow their client relationships. We provide solutions for client acquisition, transaction management, trust accounting and recordkeeping that can be deployed as stand-alone products, or as part of an integrated wealth management platform.

Additionally, FS has a business unit with the purpose of managing and advancing technology, deployment and distribution strategies including advanced-technology development and deployment frameworks and system components such as market data and time-series components, and valuation, risk and compliance engines. The business unit helps financial institutions develop and deploy custom applications, integrates SunGard system components with proprietary or third party components, and implements BPM solutions in a virtualized, SaaS environment.

FS also has a global services organization that delivers business consulting, technology and professional services for financial services institutions, energy companies and corporations. Leveraging our global delivery model, more than 5,000 consultants and developers worldwide help customers manage their complex data needs, optimize end-to-end business processes and assist with systems integration, while providing full application development, maintenance, testing and support services.

Higher Education

HE provides software and technology services to colleges and universities, including community colleges, liberal arts colleges, public universities, private colleges, for profit institutions, foundations, state systems and international institutions, to help them support communities of learners. HE also provides software and services to school districts (K-12). Our strategy, which we call the Open Digital Campus, combines our deep expertise in higher education with alternative delivery models, modular software components and modern technologies that help universities and colleges design and build their next-generation digital campuses. Our HE solutions include:

Academics & Student Success: We provide solutions to help institutions monitor student progress, identify at-risk students and intervene to provide them with timely support. We provide specialized expertise to help academic departments create online courses and academic programs and to help institutions identify funding opportunities and secure grants from foundations, governmental and other funding sources.

Alumni Relations & Development: Our solutions help advancement officers, alumni relations directors and fund-raisers to cultivate relationships with alumni, institutional donors and friends. Using these solutions, institutions plan and execute capital and other fundraising campaigns and orchestrate opportunities for ongoing interaction to deepen relationships among alumni and other members of the extended educational community.

Business Intelligence: We offer software solutions and technology services to support enterprise reporting, performance management and data-driven decision making. We provide functionally focused performance management applications for enrollment management officers in the areas of recruiting, admissions and student retention, as well as performance management solutions for advancement officers.

Community & Relationship Management: We provide solutions that help institutional personnel cultivate relationships and manage personalized interaction with students from the first point of contact through admissions, the student's campus experience, to graduation and beyond. We also

Table of Contents

provide campus portal and communications solutions that serve as the focal point for providing information and services to members of the campus community.

Enabling Technologies: Our solutions provide institutions with technologies and services to help them manage institutional information and business processes. Our data integration technologies and services facilitate the interoperability of our systems and diverse third-party systems within the digital campus. Our identity and access management services aid in maintaining the security of campus data and systems. Our mobile platform and mobile application development services provide our customers with a community-sourced approach to developing, deploying and supporting mobile applications.

Finance & Human Capital Management: We provide financial management solutions tailored to the unique business structure of colleges and universities, including specialized functions to address education-specific needs such as faculty compensation tracking, travel and expense management, and integration with student administration systems.

IT Management Services: Our managed services provide expertise to augment the in-house capabilities of our customers in administering, managing and supporting IT needs and other mission-critical functions. We provide institutions with IT management resources and expertise including staffing of chief information officers and other IT staff to efficiently augment or strategically source IT support. We fulfill a full spectrum of IT needs, extending from application hosting and management to systems implementation, infrastructure management, 24/7 help desk support, project management, reporting and institutional research support and technology management.

K-12 Education: We provide administrative information software solutions and related implementation and support services for K-12 school districts and private schools throughout the United States. Our software and technology services help school districts improve the efficiency of their operations and use Web-based technologies to serve their constituents. We offer a fully integrated suite of products for student information, learning management, special education, financial and human resource activities. Effective January 1, 2011, our K-12 Education business was moved from our PS segment into our HE segment.

Student Services: Our solutions help colleges and universities manage the student lifecycle from recruiting and admissions through registration, financial aid, student retention and completion. We offer end-to-end student administration systems, as well as applications to support specialized student services functions. We also provide expertise to help customers improve their recruiting effectiveness.

Public Sector

PS provides software and technology services designed to meet the specialized needs of local, state and federal governments, public safety and justice agencies, utilities and public sector institutions as well as nonprofits. More than 115 million citizens in North America live in municipalities that rely on our products and services.

Our public administration solutions support a range of specialized enterprise resource planning and administrative processes for functions such as accounting, human resources, payroll, utility billing, land management and managed IT services. Public safety and justice agencies use our solutions to manage emergency dispatch operations, citizen and incident records, mobile computing in the field, and the operation of courts and jails. Our e-Government solutions help local governments to use the Internet and wireless technologies to serve their constituents. Our PS software and service solutions

Table of Contents

help our customers connect staff, departments and citizens to help improve the quality of life in the communities they serve. In December 2010, we sold our Public Sector U.K. operation.

Availability Services

AS helps our customers improve the resilience of mission critical systems. We do this by designing, implementing and managing cost-effective solutions using people, process and technology to address enterprise IT availability needs. Since we pioneered commercial disaster recovery in the 1970s, we believe that our specialization in information availability solutions, together with our experience, technology expertise, resource management capabilities, vendor neutrality and diverse service offerings, have uniquely positioned us to meet customers' varied needs in an environment in which businesses are critically dependent on availability of IT. We have a comprehensive portfolio of services that extend from always ready standby services to high availability advanced recovery services and always on production and managed services, including planning and provisioning of enterprise cloud computing and SaaS platforms. We also provide business continuity management software and consulting services to help our customers design, implement and maintain plans to protect their central business systems. To serve our 10,000 AS customers, we have 5,000,000 square feet of data center and operations space at over 80 facilities in over ten countries. Since our inception, we have helped our customers recover from unplanned interruptions resulting from major disasters including the Gulf Coast hurricanes in 2008, widespread flooding in the U.K. in 2007, hurricane Katrina and Gulf Coast hurricanes in 2005, Florida hurricanes in 2004, the Northeast U.S. blackout in 2003 and the terrorist attacks of September 11, 2001.

We provide the following four categories of services: recovery services, managed services, consulting services and business continuity management software. They can be purchased independently or collectively, depending on the customer's requirements. Although recovery services remain our principal revenue generating services, managed services, consulting and business continuity management software increasingly account for a greater percentage of our new sales. Because advanced recovery and managed services are often unique to individual customers and utilize a greater proportion of dedicated (versus shared) resources, they typically require modestly more capital expenditures and command a somewhat lower operating margin rate than traditional systems recovery services. The combination of all of these services provides our customers with a total, end-to-end IT operations and information availability management solution.

Recovery Services: AS helps customers maintain access to the information and computer systems they need to run their businesses by providing cost-effective solutions to keep IT systems operational and secure in the event of an unplanned business disruption. These business disruptions can range from man-made events (e.g., power outages, telecommunications disruptions and acts of terrorism) to natural disasters (e.g., floods, hurricanes and earthquakes). AS offers a complete range of recovery services, depending on the length of time deemed acceptable by customers for IT systems outage—ranging from minutes (for mission-critical applications) to several hours or several days (for non-mission-critical applications). We deliver these services using processors, servers, storage devices, networks and other resources and infrastructure that are subscribed to by multiple customers, which results in economies of scale for us and cost-effectiveness for our customers. These shared services range from basic standby systems recovery services, workforce continuity services, and mobile recovery options to blended advanced recovery or high availability solutions that typically combine systems recovery services with dedicated data storage resources that allow customers to replicate data to one of our sites, helping them minimize data loss and reduce recovery times.

Table of Contents

Managed Services: AS provides IT infrastructure and production services that customers use to run their businesses on a day-to-day basis. These services range from co-located IT infrastructure (e.g., where AS provides data center space, power, cooling and network connectivity) to fully managed infrastructure services (e.g., where AS fully manages the daily operation of a customer’s IT infrastructure). Some managed services require dedicated processors, servers, storage devices, networks and other resources, which are either obtained by the customer or provided by us for the customer’s exclusive use. Other managed services are provided on shared infrastructure. Managed services are designed in a flexible manner that allows customers to choose the services they need from a menu of options delivered on pre-agreed schedules or on an on-demand basis. Therefore, the combination of selected managed services is unique to each customer, with solutions crafted to meet that customer’s specific needs. Managed services help customers augment their IT resources and skills without having to hire full-time internal IT staff and invest in infrastructure that is not fully used all the time. In 2010, we launched enterprise-grade cloud services and will continue to expand our cloud offering in 2011.

Consulting Services: AS offers consulting services to help customers solve critical business continuity and IT infrastructure problems including business continuity, data storage and management, information security, and numerous categories of IT infrastructure operations.

Business Continuity Management Software: AS offers software solutions that help customers operate a comprehensive and professional business continuity plan across their enterprise and enable ongoing business operations in a crisis. AS software has flexible modular solutions that allow customers to add functionality as required. Modules are available to support business impact analysis, business continuity planning, incident response and emergency notification. The software solution leverages a common platform for data consistency, as well as standardized reporting for seamless automation of the business continuity process.

Acquisitions

To complement our organic growth, we have a highly disciplined program to identify, evaluate, execute and integrate acquisitions. Generally, we seek to acquire businesses that broaden our existing product lines and service offerings by adding complementary products and service offerings and by expanding our geographic reach. During 2010, we spent approximately \$82 million in cash to acquire four businesses.

The following table lists the businesses we acquired in 2010:

Acquired Company/Business	Date Acquired	Description
InMatrix Holdings	01/29/10	Provides credit risk management solutions for commercial lending primarily to the banking industry.
365 Hosting Limited	03/11/10	Provides cloud computing and data center managed IT services.
Fox River Execution Technology, LLC	07/19/10	Registered broker/dealer that provides algorithmic trade execution.
Mindwell AB	10/05/10	Swedish financial technology consulting services firm.

Table of Contents

Product Development

We continually support, upgrade and enhance our systems and develop new products to meet the needs of our customers for operational efficiency and resilience and to leverage advances in technology. FS continues to transform some of the key functionality of its core systems into components for its new software development and on-demand delivery environment called Infinity. Infinity enables financial institutions to develop and deploy custom applications, integrating SunGard components with their own proprietary or third party components. Infinity uses SunGard's Common Services Architecture (CSA), a service-oriented architecture (SOA) development framework, offering BPM and a virtualized, SaaS infrastructure.

Our expenditures for software development during the years ended December 31, 2008, 2009 and 2010, including amounts that were capitalized, totaled approximately \$325 million, \$364 million and \$385 million, respectively. In 2008, 2009 and 2010, software development expenses were 8%, 9% and 10%, respectively, of revenue from software and processing solutions. These amounts do not include routine software support costs that are included in cost of sales, nor do they include costs incurred in performing certain customer-funded development projects in the ordinary course of business.

Marketing

Most of our FS and HE solutions are marketed throughout North America and Western Europe and many are marketed worldwide, including Asia-Pacific, Central and Eastern Europe, the Middle East, Africa and Latin America. Our PS solutions are marketed primarily in North America. Our AS solutions are marketed primarily in North America and Europe, with a focus on both new accounts and existing accounts. Our revenue from sales outside the United States during the years ended December 31, 2008, 2009 and 2010 totaled approximately \$1.45 billion, \$1.50 billion and \$1.56 billion, respectively.

Brand and Intellectual Property

We own registered marks for the SUNGARD name and own or have applied for trademark registrations for many of our services and software products.

To protect our proprietary services and software, we rely upon a combination of copyright, patent, trademark and trade secret law, confidentiality restrictions in contracts with employees, customers and others, software security measures, and registered copyrights and patents. We also have established policies requiring our personnel and representatives to maintain the confidentiality of our proprietary property. We have a few registrations of our copyrights and a number of patents and patent applications pending. We will continue to apply for software and business method patents on a case-by-case basis and will continue to monitor ongoing developments in the evolving software and business method patent field (see ITEM 1A RISK FACTORS).

Competition

Because most of our computer services and software solutions are specialized and technical in nature, most of the niche areas in which we compete have a relatively small number of significant competitors. Some of our existing competitors and some potential competitors have substantially greater financial, technological and marketing resources than we have.

Financial Systems. In our FS business, we compete with numerous other data processing and software vendors that may be broadly categorized into two groups. The first group is comprised of

Table of Contents

specialized financial systems companies that are much smaller than we are. The second group is comprised of large computer services companies whose principal businesses are not in the financial systems area, some of which are also active acquirors. We also face competition from the internal processing and IT departments of our customers and prospects. The key competitive factors in marketing financial systems are the accuracy and timeliness of processed information provided to customers, features and adaptability of the software, level and quality of customer support, degree of responsiveness, level of software development expertise, total cost of ownership and return on investment. We believe that we compete effectively with respect to each of these factors and that our leadership, reputation and experience in this business are important competitive advantages.

Higher Education and Public Sector. In our HE and PS businesses, we compete with a variety of other vendors depending upon customer characteristics such as size, type, location, computing environment and functional requirements. For example, different competitors serve educational institutions and government agencies of different sizes or types and in different states or geographic regions. Competitors in these businesses range from larger providers of generic enterprise resource planning systems to smaller providers of specialized applications and technologies. We also compete with outsourcers and systems integrators, as well as the internal processing and information technology departments of our customers and prospective customers. The key competitive factors in marketing higher education and public sector systems are the accuracy and timeliness of processed information provided to customers, features and adaptability of the software, level and quality of customer support, degree of responsiveness, level of software development expertise and overall net cost. We believe that we compete effectively on each of these factors and that our leadership, reputation and experience in these businesses are important competitive advantages.

Availability Services. In our AS business, our greatest source of competition for recovery and advanced recovery services is in-house dedicated solutions, which are solutions that our customers or prospective customers develop and maintain internally instead of purchasing from a vendor such as us. Historically, our single largest commercial competitor in the AS business for recovery and advanced recovery services has been IBM Corporation, which we believe is the only company other than ours that currently provides the full continuum of information availability services. We also face competition from specialized vendors, including hardware manufacturers, data-replication and virtualization software companies, outsourcers, managed hosting companies, IT services companies and telecommunications companies. Competition among managed or data center service providers is fragmented across various competitor types, such as major telecommunication providers, carrier neutral managed services providers, real estate investment trusts, IT outsourcers and regional colocation providers. We believe that we compete effectively with respect to the key competitive dimensions in the information availability industry, namely economies of scale, quality of infrastructure, scope and quality of services, including breadth of hardware platforms and network capacity, level and quality of customer support, level of technical expertise, vendor neutrality and price. We also believe that our experience and reputation as an innovator in information availability solutions, our proven track record, our financial stability and our ability to provide the entire portfolio of information availability services as a single vendor solution are important competitive advantages.

Employees

As of December 31, 2010, we had approximately 20,100 employees. Our success depends partly on our continuing ability to retain and attract skilled technical, sales and management personnel. While skilled personnel are in high demand and competition exists for their talents, we have been able to

Table of Contents

retain and attract highly qualified personnel (see ITEM 1A RISK FACTORS). We believe that our employee relations are excellent.

ITEM 1A. RISK FACTORS

Certain of the matters we discuss in this Report on Form 10-K may constitute forward-looking statements. You can identify forward-looking statements because they contain words such as believes, expects, may, will, should, seeks, approximately, intends, plans, anticipates or similar expressions which concern our strategy, plans or intentions. All statements we make relating to estimated and projected earnings, margins, costs, expenditures, cash flows, growth rates and financial results are forward-looking statements. In addition, we, through our senior management, from time to time make forward-looking public statements concerning our expected future operations and performance and other developments. All of these forward-looking statements are subject to risks and uncertainties that may change at any time, and, therefore, our actual results may differ materially from those we expected. We derive most of our forward-looking statements from our operating budgets and forecasts, which are based upon many detailed assumptions. While we believe that our assumptions are reasonable, we caution that it is very difficult to predict the impact of known factors, and, of course, it is impossible for us to anticipate all factors that could affect our actual results. Some of the factors that we believe could affect our results include:

our high degree of debt-related leverage;

general economic and market conditions;

the condition of the financial services industry, including the effect of any further consolidation among financial services firms;

the integration of acquired businesses, the performance of acquired businesses, and the prospects for future acquisitions;

the effect of war, terrorism, natural disasters or other catastrophic events;

the effect of disruptions to our systems and infrastructure;

the timing and magnitude of software sales;

the timing and scope of technological advances;

customers taking their information availability solutions in-house;

the trend in information availability toward solutions utilizing more dedicated resources;

the market and credit risks associated with clearing broker operations;

the ability to retain and attract customers and key personnel;

risks relating to the foreign countries where we transact business;

the ability to obtain patent protection and avoid patent-related liabilities in the context of a rapidly developing legal framework for software and business-method patents;

a material weakness in our internal controls; and

unanticipated changes in our tax provision or the adoption of new tax legislation.

The factors described in this paragraph and other factors that may affect our business or future financial results, as and when applicable, are discussed in our filings with the Securities and Exchange

Table of Contents

Commission (SEC), including this Report on Form 10-K. We assume no obligation to update any written or oral forward-looking statements made by us or on our behalf as a result of new information, future events or other factors.

Risks Related to Our Indebtedness

Our substantial leverage could adversely affect our ability to raise additional capital to fund our operations, limit our ability to react to changes in the economy or our industry, expose us to interest rate risk to the extent of our variable rate debt and prevent us from meeting our debt obligations.

As a result of being acquired on August 11, 2005 by a consortium of private equity investment funds, we are highly leveraged and our debt service requirements are significant.

Our high degree of debt-related leverage could have important consequences, including:

making it more difficult for us to make payments on our debt obligations;

increasing our vulnerability to general economic and industry conditions;

requiring a substantial portion of cash flow from operations to be dedicated to the payment of principal and interest on our indebtedness, therefore reducing our ability to use our cash flow to fund our operations, capital expenditures and future business opportunities;

exposing us to the risk of increased interest rates as certain of our borrowings, including borrowings under our senior secured credit facilities, are at variable rates of interest;

restricting us from making acquisitions or causing us to make non-strategic divestitures;

limiting our ability to obtain additional financing for working capital, capital expenditures, product development, debt service requirements, acquisitions and general corporate or other purposes; and

limiting our ability to adjust to changing market conditions and placing us at a competitive disadvantage compared to our competitors who are less highly leveraged.

We and our subsidiaries may be able to incur substantial additional indebtedness in the future, subject to the restrictions contained in our senior secured credit facilities and the indentures relating to our senior notes due 2015, 2018 and 2020 and senior subordinated notes due 2015. If new indebtedness is added to our current debt levels, the related risks that we now face could intensify.

Our debt agreements contain restrictions that limit our flexibility in operating our business.

Our senior secured credit agreement and the indentures governing our senior notes due 2015, 2018 and 2020 and senior subordinated notes due 2015 contain various covenants that limit our ability to engage in specified types of transactions. These covenants limit our ability to, among other things:

incur additional indebtedness or issue certain preferred shares;

pay dividends on, repurchase or make distributions in respect of our capital stock or make other restricted payments;

make certain investments;

sell certain assets;

create liens;

consolidate, merge, sell or otherwise dispose of all or substantially all of our assets; and

enter into certain transactions with our affiliates.

Table of Contents

In addition, under the senior secured credit agreement, we are required to satisfy and maintain specified financial ratios and other financial condition tests. Our ability to meet those financial ratios and tests can be affected by events beyond our control, and we may not be able to meet those ratios and tests. A breach of any of these covenants could result in a default under the senior secured credit agreement. Upon an event of default under the senior secured credit agreement, the lenders could elect to declare all amounts outstanding to be immediately due and payable and terminate all commitments to extend further credit.

If we were unable to repay those amounts, the lenders under the senior secured credit agreement could proceed against the collateral granted to them to secure that indebtedness. We have pledged a significant portion of our assets as collateral under the senior secured credit agreement and the senior notes due 2014, to the extent required by the indenture governing these notes. If the lenders under the senior secured credit agreement accelerate the repayment of borrowings, we may not have sufficient assets to repay the senior secured credit facilities and the senior notes, as well as our unsecured indebtedness.

Risks Related to Our Business

Our business depends largely on the economy and financial markets, and a slowdown or downturn in the economy or financial markets could adversely affect our business and results of operations.

When there is a slowdown or downturn in the economy, a drop in stock market levels or trading volumes, or an event that disrupts the financial markets, our business and financial results may suffer for a number of reasons. Customers may react to worsening conditions by reducing their capital expenditures in general or by specifically reducing their IT spending. In addition, customers may curtail or discontinue trading operations, delay or cancel IT projects, or seek to lower their costs by renegotiating vendor contracts. Also, customers with excess IT resources may choose to take their information availability solutions in-house rather than obtain those solutions from us. Moreover, competitors may respond to market conditions by lowering prices and attempting to lure away our customers to lower cost solutions. If any of these circumstances remain in effect for an extended period of time, there could be a material adverse effect on our financial results. Because our financial performance tends to lag behind fluctuations in the economy, our recovery from any particular downturn in the economy may not occur until after economic conditions have generally improved.

Our business depends to a significant degree on the financial services industry, and a weakening of, or further consolidation in, or new regulations affecting, the financial services industry could adversely affect our business and results of operations.

Because our customer base is concentrated in the financial services industry, our business is largely dependent on the health of that industry. When there is a general downturn in the financial services industry, or if our customers in that industry experience financial or business problems, our business and financial results may suffer. If financial services firms continue to consolidate, there could be a material adverse effect on our business and financial results. When a customer merges with a firm using its own solution or another vendor's solution, it could decide to consolidate on a non-SunGard system, which could have an adverse effect on our financial results.

To the extent new regulations adopted negatively impact the business, operations or financial condition of our customers, our business and financial results could be adversely affected. We could be required to invest a significant amount of time and resources to comply with additional regulations or

Table of Contents

to modify the manner in which we provide products and services to our customers; and such regulations could limit how much we can charge for our services. We may not be able to update our existing products and services, or develop new ones at all or in a timely manner, to satisfy our customers' needs. Any of these events, if realized, could have a material adverse effect on our business and financial results.

Our acquisition program is an important element of our strategy but, because of the uncertainties involved, this program may not be successful and we may not be able to successfully integrate and manage acquired businesses.

Part of our growth strategy is to pursue additional acquisitions in the future. There can be no assurance that our acquisition program will continue to be successful. In addition, we may finance any future acquisition with debt, which would increase our overall levels of indebtedness and related interest costs. If we are unable to successfully integrate and manage acquired businesses, then our business and financial results may suffer. It is possible that the businesses we have acquired and businesses that we acquire in the future may perform worse than expected, be subject to an adverse litigation outcome or prove to be more difficult to integrate and manage than expected. If that happens, there may be a material adverse effect on our business and financial results for a number of reasons, including:

we may have to devote unanticipated financial and management resources to acquired businesses;

we may not be able to realize expected operating efficiencies or product integration benefits from our acquisitions;

we may have to write off goodwill or other intangible assets; and

we may incur unforeseen obligations or liabilities (including assumed liabilities not fully indemnified by the seller) in connection with acquisitions.

If we are unable to identify suitable acquisition candidates and successfully complete acquisitions, our growth may be adversely affected.

Our growth has depended in part on our ability to acquire similar or complementary businesses on favorable terms. This growth strategy is subject to a number of risks that could adversely affect our business and financial results, including:

we may not be able to find suitable businesses to acquire at affordable valuations or on other acceptable terms;

we may face competition for acquisitions from other potential acquirers, some of whom may have greater resources than us or may be less highly leveraged, or from the possibility of an acquisition target pursuing an initial public offering of its stock;

we may have to incur additional debt to finance future acquisitions as we have done in the past and no assurance can be given as to whether, and on what terms, such additional debt will be available; and

we may find it more difficult or costly to complete acquisitions due to changes in accounting, tax, securities or other regulations.

Catastrophic events may disrupt or otherwise adversely affect the markets in which we operate, our business and our profitability.

Our business may be adversely affected by a war, terrorist attack, natural disaster or other catastrophe. A catastrophic event could have a direct negative impact on us or an indirect impact on us

Table of Contents

by, for example, affecting our customers, the financial markets or the overall economy. The potential for a direct impact is due primarily to our significant investment in our infrastructure. Although we maintain redundant facilities and have contingency plans in place to protect against both man-made and natural threats, it is impossible to fully anticipate and protect against all potential catastrophes. Despite our preparations, a security breach, criminal act, military action, power or communication failure, flood, severe storm or the like could lead to service interruptions and data losses for customers, disruptions to our operations, or damage to our important facilities. The same disasters or circumstances that may lead to our customers requiring access to our availability services may negatively impact our own ability to provide such services. Our three largest availability services facilities are particularly important, and a major disruption at one or more of those facilities could disrupt or otherwise impair our ability to provide services to our availability services customers. If any of these events happen, we may be exposed to unexpected liability, our customers may leave, our reputation may be tarnished, and there could be a material adverse effect on our business and financial results.

Our application service provider systems may be subject to disruptions that could adversely affect our reputation and our business.

Our application service provider systems maintain and process confidential data on behalf of our customers, some of which is critical to their business operations. For example, our global trading and position, risk and operations systems maintain account and trading information for our customers and their clients, and our wealth management and insurance systems maintain investor account information for retirement plans, insurance policies and mutual funds. There is no guarantee that the systems and procedures that we maintain to protect against unauthorized access to such information are adequate to protect against all security breaches. If our application service provider systems are disrupted or fail for any reason, or if our systems or facilities are infiltrated or damaged by unauthorized persons, our customers could experience data loss, financial loss, harm to reputation and significant business interruption. If that happens, we may be exposed to unexpected liability, our customers may leave, our reputation may be tarnished, and there could be a material adverse effect on our business and financial results.

Because the sales cycle for our software is typically lengthy and unpredictable, our results may fluctuate from period to period.

Our operating results may fluctuate from period to period and be difficult to predict in a particular period due to the timing and magnitude of software sales. We offer a number of our software solutions on a license basis, which means that the customer has the right to run the software on its own computers. The customer usually makes a significant up-front payment to license software, which we generally recognize as revenue when the license contract is signed and the software is delivered. The size of the up-front payment often depends on a number of factors that are different for each customer, such as the number of customer locations, users or accounts. As a result, the sales cycle for a software license may be lengthy and take unexpected turns. Thus, it is difficult to predict when software sales will occur or how much revenue they will generate. Since there are few incremental costs associated with software sales, our operating results may fluctuate from quarter to quarter and year to year due to the timing and magnitude of software sales.

Rapid changes in technology and our customers' businesses could adversely affect our business and financial results.

Our business may suffer if we do not successfully adapt our products and services to changes in technology and changes in our customers' businesses. These changes can occur rapidly and at unpredictable intervals and we may not be able to respond adequately. If we do not successfully update

Table of Contents

and integrate our products and services to adapt to these changes, or if we do not successfully develop new products and services needed by our customers to keep pace with these changes, then our business and financial results may suffer. Our ability to keep up with technology and business changes is subject to a number of risks and we may find it difficult or costly to, among other things:

update our products and services and to develop new products fast enough to meet our customers' needs;

make some features of our products and services work effectively and securely over the Internet;

integrate more of our FS solutions;

update our products and services to keep pace with business, regulatory and other developments in the financial services industry, where many of our customers operate; and

update our services to keep pace with advancements in hardware, software and telecommunications technology.

Some technological changes, such as advancements that have facilitated the ability of our AS customers to develop their own internal solutions, may render some of our products and services less valuable or eventually obsolete. In addition, because of ongoing, rapid technological changes, the useful lives of some technology assets have become shorter and customers are therefore replacing these assets more often. As a result, our customers are increasingly expressing a preference for contracts with shorter terms, which could make our revenue less predictable in the future.

Customers taking their information availability solutions in-house may continue to create pressure on our organic revenue growth rate.

Our AS solutions allow customers to leverage our significant infrastructure and take advantage of our experience, technology expertise, resource management capabilities and vendor neutrality. Technological advances in recent years have significantly reduced the cost and the complexity of developing in-house solutions. Some customers, especially among the very largest having significant IT resources, prefer to develop and maintain their own in-house availability solutions, which can result in a loss of revenue from those customers. If this trend continues or worsens, there will be continued pressure on our organic revenue growth rate.

The trend toward information availability solutions utilizing more single customer dedicated resources likely will lower our overall operating margin rate over time.

In the information availability services industry, especially among our more sophisticated customers, there is an increasing preference for solutions that utilize some level of dedicated resources, such as blended advanced recovery services and managed services. The primary reason for this trend is that adding dedicated resources, although more costly, provides greater control, reduces data loss and facilitates quicker responses to business interruptions. Advanced recovery services often result in greater use of dedicated resources with a modest decrease in operating margin rate. Managed services require significant dedicated resources and, therefore, have an appropriately lower operating margin rate.

Table of Contents

Our brokerage operations are highly regulated and are riskier than our other businesses.

Organizations like the Securities and Exchange Commission, Financial Services Authority and Financial Industry Regulatory Authority can, among other things, fine, censure, issue cease-and-desist orders and suspend or expel a broker/dealer or any of its officers or employees for failures to comply with the many laws and regulations that govern brokerage operations. Our ability to comply with these laws and regulations is largely dependent on our establishment, maintenance and enforcement of an effective brokerage compliance program. Our failure to establish, maintain and enforce proper brokerage compliance procedures, even if unintentional, could subject us to significant losses, lead to disciplinary or other actions, and tarnish our reputation. Regulations affecting the brokerage industry, in particular with respect to active traders, may change, which could adversely affect our financial results.

We are exposed to certain risks relating to the execution and clearance services provided by our brokerage operations to retail customers, institutional clients (including hedge funds and other broker/dealers), and proprietary traders. These risks include, but are not limited to, customers failing to pay for securities commitments in the marketplace, trading errors, the inability or failure to settle trades, and trade execution or clearance systems failures. In our other businesses, we generally can disclaim liability for trading losses that may be caused by our software, but in our brokerage operations, we cannot limit our liability for trading losses even when we are not at fault. As a result we may suffer losses that are disproportionate to the relatively modest profit contributions of this business.

We could lose revenue due to fiscal funding or termination for convenience clauses in certain customer contracts, especially in our HE and PS businesses.

Certain of our customer contracts, particularly those with governments, institutions of higher education and school districts, may be partly or completely terminated by the customer due to budget cuts or sometimes for any reason at all. These types of clauses are often called fiscal funding or termination for convenience clauses. If a customer exercises one of these clauses, the customer would be obligated to pay for the services we performed up to the date of exercise, but would not have to pay for any further services. In addition, governments, institutions of higher education and school districts may require contract terms that differ from our standard terms. While we have not been materially affected by exercises of these clauses or other unusual terms in the past, we may be in the future. If customers that collectively represent a substantial portion of our revenue were to invoke the fiscal funding or termination for convenience clauses of their contracts, our future business and results of operations could be adversely affected.

If we fail to comply with government regulations in connection with our business or providing technology services to certain financial institutions, our business and results of operations may be adversely affected.

Because we act as a third-party service provider to financial institutions and provide mission-critical applications for many financial institutions that are regulated by one or more member agencies of the Federal Financial Institutions Examination Council (FFIEC), we are subject to examination by the member agencies of the FFIEC. More specifically, we are a Multi-Regional Data Processing Servicer of the FFIEC because we provide mission critical applications for financial institutions from several data centers located in different geographic regions. As a result, the FFIEC conducts periodic reviews of certain of our operations in order to identify existing or potential risks associated with our operations that could adversely affect the financial institutions to whom we provide services, evaluate

Table of Contents

our risk management systems and controls, and determine our compliance with applicable laws that affect the services we provide to financial institutions. In addition to examining areas such as our management of technology, data integrity, information confidentiality and service availability, the reviews also assess our financial stability. Our incurrence of significant debt in connection with the LBO increases the risk of an FFIEC agency review determining that our financial stability has been weakened. A sufficiently unfavorable review from the FFIEC could result in our financial institution customers not being allowed to use our technology services, which could have a material adverse effect on our business and financial condition.

If we fail to comply with any regulations applicable to our business, we may be exposed to unexpected liability and/or governmental proceedings, our customers may leave, our reputation may be tarnished, and there could be a material adverse effect on our business and financial results. In addition, the future enactment of more restrictive laws or rules on the federal or state level, or, with respect to our international operations, in foreign jurisdictions on the national, provincial, state or other level, could have an adverse impact on business and financial results.

If we are unable to retain or attract customers, our business and financial results will be adversely affected.

If we are unable to keep existing customers satisfied, sell additional products and services to existing customers or attract new customers, then our business and financial results may suffer. A variety of factors could affect our ability to successfully retain and attract customers, including the level of demand for our products and services, the level of customer spending for information technology, the level of competition from customers that develop their own solutions internally and from other vendors, the quality of our customer service, our ability to update our products and develop new products and services needed by customers, and our ability to integrate and manage acquired businesses. Further, the markets in which we operate are highly competitive and we may not be able to compete effectively. Our services revenue, which has been largely recurring in nature, comes from the sale of our products and services under fixed-term contracts. We do not have a unilateral right to extend these contracts when they expire. Revenue from our broker/dealer businesses is not subject to minimum or ongoing contractual commitments on the part of brokerage customers. If customers cancel or refuse to renew their contracts, or if customers reduce the usage levels or asset values under their contracts, there could be a material adverse effect on our business and financial results.

If we fail to retain key employees, our business may be harmed.

Our success depends on the skill, experience and dedication of our employees. If we are unable to retain and attract sufficiently experienced and capable personnel, especially in product development, sales and management, our business and financial results may suffer. For example, if we are unable to retain and attract a sufficient number of skilled technical personnel, our ability to develop high quality products and provide high quality customer service may be impaired. Experienced and capable personnel in the technology industry remain in high demand, and there is continual competition for their talents. When talented employees leave, we may have difficulty replacing them, and our business may suffer. There can be no assurance that we will be able to successfully retain and attract the personnel that we need.

We are subject to the risks of doing business internationally.

A portion of our revenue is generated outside the United States, primarily from customers located in Europe. Over the past few years we have expanded our operations in India and acquired businesses

Table of Contents

in China and Singapore in an effort to increase our presence throughout Asia Pacific. Because we sell our services outside the United States, our business is subject to risks associated with doing business internationally. Accordingly, our business and financial results could be adversely affected due to a variety of factors, including:

changes in a specific country's or region's political and cultural climate or economic condition;

unexpected or unfavorable changes in foreign laws and regulatory requirements;

difficulty of effective enforcement of contractual provisions in local jurisdictions;

inadequate intellectual property protection in foreign countries;

trade-protection measures, import or export licensing requirements such as Export Administration Regulations promulgated by the U.S. Department of Commerce and fines, penalties or suspension or revocation of export privileges;

the effects of applicable foreign tax law and potentially adverse tax law changes;

significant adverse changes in foreign currency exchange rates;

longer accounts receivable cycles;

managing a geographically dispersed workforce; and

difficulties associated with repatriating cash in a tax-efficient manner.

In foreign countries, particularly in those with developing economies, certain business practices may exist that are prohibited by laws and regulations applicable to us, such as the U.S. Foreign Corrupt Practices Act. Although our policies and procedures require compliance with these laws and are designed to facilitate compliance with these laws, our employees, contractors and agents may take actions in violation of applicable laws or our policies. Any such violation, even if prohibited by our policies, could have a material adverse effect on our business and reputation.

The private equity firms that acquired the Company (Sponsors) control us and may have conflicts of interest with us.

Investment funds associated with or designated by the Sponsors indirectly own, through their ownership in the Parent Companies, a substantial portion of our capital stock. As a result, the Sponsors have control over our decisions to enter into any corporate transaction regardless of whether noteholders believe that any such transaction is in their own best interests. For example, the Sponsors could cause us to make acquisitions or pay dividends that increase the amount of indebtedness that is secured or that is senior to our senior subordinated notes or to sell assets.

Additionally, the Sponsors are in the business of making investments in companies and may from time to time acquire and hold interests in businesses that compete directly or indirectly with us. One or more of the Sponsors may also pursue acquisition opportunities that may be complementary to our business and, as a result, those acquisition opportunities may not be available to us. So long as investment funds associated with or designated by the Sponsors continue to indirectly own a significant amount of the outstanding shares of our common stock, even if such amount is less than 50%, the Sponsors will continue to be able to strongly influence or effectively control our decisions.

If we are unable to protect our proprietary technologies and defend infringement claims, we could lose one of our competitive advantages and our business could be adversely affected.

Our success depends in part on our ability to protect our proprietary products and services and to defend against infringement claims. If we are unable to do so, our business and financial results may suffer. To protect our proprietary technology, we rely upon a combination of copyright, patent, trademark and trade secret law, confidentiality restrictions in contracts with employees, customers and others, software security measures, and registered copyrights and patents. Despite our efforts to protect the proprietary technology, unauthorized persons may be able to copy, reverse engineer or otherwise use some of our technology. It also is possible that others will develop and market similar or better technology to compete with us. Furthermore, existing patent, copyright and trade secret laws may afford only limited protection, and the laws of certain countries do not protect proprietary technology as well as United States law. For these reasons, we may have difficulty protecting our proprietary technology against unauthorized copying or use. If any of these events happens, there could be a material adverse effect on the value of our proprietary technology and on our business and financial results. In addition, litigation may be necessary to protect our proprietary technology. This type of litigation is often costly and time-consuming, with no assurance of success.

We may be sued for violating the intellectual property rights of others.

The software industry is characterized by the existence of a large number of trade secrets, copyrights and the rapid issuance of patents, as well as frequent litigation based on allegations of infringement or other violations of intellectual property rights. We may unknowingly violate the intellectual property rights of others. Some of our competitors or other third parties may have been more aggressive than us in applying for or obtaining patent protection for innovative proprietary technologies both in the United States and internationally. In addition, we use a limited amount of open source software in our products and may use more open source software in the future. Because open source software is developed by numerous independent parties over whom we exercise no supervision or control, allegations of infringement for using open source software are possible. Although we monitor our use and our suppliers' use of open source software to avoid subjecting our products to conditions we do not intend, the terms of many open source licenses have not been interpreted by United States or other courts, and there is a risk that these licenses could be construed in a manner that could impose unanticipated conditions or restrictions on our ability to commercialize our products.

As a result of all of these factors, there can be no assurance that in the future third parties will not assert infringement claims against us and preclude us from using a technology in our products or require us to enter into royalty and licensing arrangements on terms that are not favorable to us, or force us to engage in costly infringement litigation, which could result in us paying monetary damages or being forced to redesign our products to avoid infringement. Additionally, our licenses and service agreements with our customers generally provide that we will defend and indemnify them for claims against them relating to our alleged infringement of the intellectual property rights of third parties with respect to our products or services. We might have to defend or indemnify our customers to the extent they are subject to these types of claims. Any of these claims may be difficult and costly to defend and may lead to unfavorable judgments or settlements, which could have a material adverse effect on our reputation, business and financial results. For these reasons, we may find it difficult or costly to add or retain important features in our products and services.

At present, we are vigorously defending a number of patent infringement cases. While we do not believe we have a potential liability for damages or royalties from any known current legal proceedings

Table of Contents

or claims related to the infringement of patent or other intellectual property rights that would individually or in the aggregate materially adversely affect our financial condition and operating results, the results of such legal proceedings cannot be predicted with certainty. Should we fail to prevail in any of the matters related to infringement of patent or other intellectual property rights of others or should several of these matters be resolved against us in the same reporting period, it could have a material adverse effect on our business and financial results.

Defects, design errors or security flaws in our products could harm our reputation and expose us to potential liability.

Most of our products are very complex software systems that are regularly updated. No matter how careful the design and development, complex software often contains errors and defects when first introduced and when major new updates or enhancements are released. If errors or defects are discovered in our current or future products, we may not be able to correct them in a timely manner, if at all. In our development of updates and enhancements to our products, we may make a major design error that makes the product operate incorrectly or less efficiently.

In addition, certain of our products include security features that are intended to protect the privacy and integrity of customer data. Despite these security features, our products and systems, and our customers' systems may be vulnerable to break-ins and similar problems caused by third parties, such as hackers bypassing firewalls and misappropriating confidential information. Such break-ins or other disruptions could jeopardize the security of information stored in and transmitted through our computer systems and those of our customers, subject us to liability and tarnish our reputation. We may need to expend significant capital resources in order to eliminate or work around errors, defects, design errors or security problems. Any one of these problems in our products may result in the loss of or a delay in market acceptance of our products, the diversion of development resources, a lower rate of license renewals or upgrades and damage to our reputation, and in turn may increase service and warranty costs.

A material weakness in our internal controls could have a material adverse effect on us.

Effective internal controls are necessary for us to provide reasonable assurance with respect to our financial reports and to effectively prevent fraud. If we cannot provide reasonable assurance with respect to our financial reports and effectively prevent fraud, our reputation and operating results could be harmed. Pursuant to the Sarbanes-Oxley Act of 2002, we are required to furnish a report by management on internal control over financial reporting, including management's assessment of the effectiveness of such control. Internal control over financial reporting may not prevent or detect misstatements because of its inherent limitations, including the possibility of human error, the circumvention or overriding of controls, or fraud. Further, the complexities of our quarter- and year-end closing processes increase the risk that a weakness in internal controls over financial reporting may go undetected. Therefore, even effective internal controls can provide only reasonable assurance with respect to the preparation and fair presentation of financial statements. In addition, projections of any evaluation of effectiveness of internal control over financial reporting to future periods are subject to the risk that the control may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate. If we fail to maintain the adequacy of our internal controls, including any failure to implement required new or improved controls, or if we experience difficulties in their implementation, we could fail to meet our reporting obligations, and there could be a material adverse effect on our business and financial results.

Table of Contents

Unanticipated changes in our tax provision or the adoption of new tax legislation could affect our profitability or cash flow.

We are subject to income taxes in the United States and many foreign jurisdictions. Significant judgment is required in determining our worldwide provision for income taxes. We regularly are under audit by tax authorities. Although we believe our tax provision is reasonable, the final determination of our tax liability could be materially different from our historical income tax provisions, which could have a material effect on our financial position, results of operations or cash flows. In addition, tax-law amendments in the U.S. and other jurisdictions could significantly impact how U.S. multinational corporations are taxed. Although we cannot predict whether or in what form such legislation will pass, if enacted it could have a material adverse effect on our business and financial results.

ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

ITEM 2. PROPERTIES

We lease space, primarily for availability services facilities, data centers, sales offices, customer support offices and administrative offices, in many locations worldwide. We also own some of our computer and office facilities. Our principal facilities include our leased Availability Services facilities in Philadelphia, Pennsylvania (629,800 square feet), Carlstadt, New Jersey (661,000 square feet), and Hounslow, England (195,000 square feet) and include our financial systems application service provider centers in Voorhees, New Jersey; Birmingham, Alabama; Burlington, Massachusetts; Hopkins, Minnesota; Ridgefield, New Jersey; and Wayne, Pennsylvania. We believe that our leased and owned facilities are adequate for our present operations.

ITEM 3. LEGAL PROCEEDINGS

We are presently a party to certain lawsuits arising in the ordinary course of our business. We believe that none of our current legal proceedings will be material to our business, financial condition or results of operations.

ITEM 4. (REMOVED AND RESERVED)

PART II

ITEM 5. MARKET FOR REGISTRANTS' COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

Our outstanding common stock is privately held, and there is no established public trading market for our common stock. As of February 15, 2011, there were 197 holders of record of each of Class A common stock and Class L common stock of SCC, and there was one holder of record of common stock of SunGard.

See ITEM 7-LIQUIDITY AND CAPITAL RESOURCES COVENANT COMPLIANCE for a description of restrictions on our ability to pay dividends.
