Semiannual Report

Global High Income Fund Inc.

Semiannual Report

April 30, 2014

Managed distribution policy key points to note

The Fund has a managed distribution policy. Effective June 2014, the Fund makes regular monthly distributions at an annualized rate equal to 6% of the Fund s net asset value, as determined as of the last trading day during the first week of a month (usually a Friday, unless the NYSE is closed that day). (From June 2012 through the monthly distribution for May 2014, the annualized rate had been 7% (which, consistent with the policy, in any given month may have been comprised of a combination of net investment income, short- and/or long-term capital gains, and/or a return of capital)).

To the extent that the Fund s taxable income in any fiscal year exceeds the aggregate amount distributed based on a fixed percentage of its net asset value, the Fund would make an additional distribution in the amount of that excess near the end of the fiscal year. To the extent that the aggregate amount distributed by the Fund (based on a percentage of its net assets) exceeds its current and accumulated earnings and profits, the amount of that excess would constitute a return of capital or net realized capital gains for tax purposes. A return of capital may occur, for example, when some or all of the money that shareholders invested in the Fund is deemed to be paid back to shareholders. A return of capital distribution does not necessarily reflect the Fund s investment performance and should not be confused with yield or income.

You should not draw any conclusions about the Fund s investment performance from the amount of the monthly distribution or from the terms of the Fund s managed distribution policy.

The Fund periodically issues notices and press releases estimating the source characteristics of its monthly distributions. The estimated amounts and sources reported in these materials are only estimates and are not being provided for tax reporting purposes. The actual amounts and sources of the amounts for accounting and tax reporting purposes will depend upon the Fund s investment experience during the remainder of its fiscal year and may be subject to changes based on tax regulations. The Fund will send you a Form 1099-DIV (or your financial intermediary should provide you with similar information) for the calendar year that will tell you how to report these distributions for federal income tax purposes.

The Fund s Board may change or terminate the managed distribution policy at any time without prior notice to Fund shareholders; any such change or termination may have an adverse effect on the market price for the Fund s shares.

Further information regarding the Fund s managed distribution policy is contained in the section captioned Distribution policy towards the end of this report.

June 13, 2014

Dear shareholder,

We present you with the semiannual report for Global High Income Fund Inc. (the Fund) for the six months ended April 30, 2014.

Performance

For the six months ended April 30, 2014, the Fund declined 0.67% on a net asset value basis and gained 0.55% on a market price basis. In comparison, the Fund s benchmark, the Global High Income Fund Index (the Index), gained 0.90%. Over the same period, the Fund s Lipper Emerging Markets Hard Currency Debt Funds peer group median returned 2.31% on a net asset value basis and returned 3.28% on a market price basis. (For more performance information, including a description of the Index, please refer to Performance at a glance on page 4.)

The Fund did not use structural leverage during the reporting period. That is, the Fund did not have preferred stock outstanding or borrow from banks for investment purposes, as some of its peers may have done. Leverage magnifies returns on both the upside and on the downside and creates a wider range of returns within the Fund s peer group.

Global High Income Fund Inc.

Investment goals:

Primarily, high level of current income; secondarily, capital appreciation

Portfolio Management:

Portfolio management team, including Uwe Schillhorn UBS Global Asset Management (Americas) Inc.

Commencement:

October 8, 1993

NYSE symbol:

GHI

Distribution payments:

Monthly

The Fund traded at a discount to its net asset value (NAV), although the discount slightly narrowed during the reporting period. On the last trading day of the preceding fiscal year, which ended October 31, 2013, the Fund traded at a discount of 12.1%. At the close of the current reporting period, April 30, 2014, the Fund traded at a discount of 11.5%. As of the same dates, the Lipper peer group reported median discounts of 10.9% and 9.7%, respectively.

A fund trades at a discount when the market price at which its shares trade is less than its NAV per share. Alternatively, a fund trades at a premium when the market price at which its shares trade is more than its NAV per share. The market price is the price the market is willing to pay for shares of a fund at a given time, and may be influenced by a range of factors, including supply and demand, and market conditions. NAV per share is determined by dividing the value of the Fund securities, cash and other assets, less all liabilities, by the total number of common shares outstanding.

After the fiscal reporting period ended, the Fund issued a press release on May 21, 2014, announcing a reduction in the annualized rate for distributions pursuant to its managed distribution policy from 7% to 6%, effective beginning with the June 2014 monthly distribution. (Important features of this policy are described on the inside front cover of this report.)

This change was believed appropriate in light of the Fund s investment opportunities in the current market environment. Notably, global government bond yields remain at historically low levels. While emerging markets debt, issued both externally (that is, debt denominated in US dollars or other hard, developed country currencies) and domestically (that is, debt denominated in a local emerging markets currency), typically offers premiums (i.e., higher yields) to developed market debt, the yields paid by emerging markets debt remains low compared to historical levels. Also, opportunities to generate significant capital gains by such investments may be more limited over the shorter-term as emerging markets debt is expected to remain somewhat sensitive to changes in US Treasury yields, which are expected to increase; and local currency denominated debt has generally been more sensitive to local economic and geopolitical issues. While we maintain a positive long-term outlook for the emerging markets debt asset class, we have a cautious near-term outlook and expect to see continued periods of elevated volatility. Given prevailing market yields, it is believed that the new distribution rate is more appropriate and in line with the Fund s ongoing earnings potential as of this time.

Market commentary

After a challenging start, the emerging markets debt asset class rallied and generated solid results during the six month reporting period as a whole. Risk aversion was elevated at times during the first half of the period amid rising US interest rates and concerns regarding global growth, the latter of which was partially triggered by weak economic data in China. In addition, there were political concerns in Turkey and Venezuela.

While there was no one catalyst, the asset class then began rallying in February. Given significant spread¹ widening in 2013 and January 2014, emerging market debt valuations were more attractive, and investors may have felt that negative economic and geopolitical news had been largely priced into the market. Despite a number of headline risks, including Russia s actions in Ukraine, the asset class continued to move higher in March and April.

During the six months ended April 30, 2014, US dollar-denominated emerging markets debt, as measured by the JP Morgan Emerging Markets Bond Index Global (EMBI Global), gained 3.30%. Local market investments (in other words, emerging markets debt denominated in the currency of the issuer) returned -1.48%, as measured by the JP Morgan Government Bond Index-Emerging Markets Global Diversified (GBI-EM Global Diversified).

Portfolio commentary

What worked

An underweight to Ukrainian debt was beneficial for results. Ukrainian debt performed poorly amid Russia s annexation of Crimea and uncertainties about future hostilities.

An overweight to Indonesian US dollar-denominated debt was additive for performance. Despite the country s high current account deficit, it outperformed the Index, supported by promising measures to trim its deficit.

An overweight to US dollar-denominated debt from Sri Lanka contributed to performance. Investor demand was solid overall given attractive yields. In addition, the government took a number of actions to support its economy.

An overweight to Indian US dollar-denominated debt enhanced the Fund s results. India s US dollar-denominated debt outperformed the Index as sentiment for the country improved leading up to its national elections and expectations for meaningful reforms.

An overweight to local currency debt from Bangladesh was rewarded given its strong results. What didn t work

An underweight to Argentinian US dollar-denominated debt was negative for performance. We moved from an overweight to an underweight position in late 2013/early 2014, given our concerns regarding the fundamentals and political backdrop in Argentina. After generating weak results during the first half of the reporting period, our underweight was not rewarded, as its US dollar denominated debt rallied as the period progressed.

An overweight to US dollar-denominated debt from Venezuela was not rewarded. Despite performing well during the second half of the reporting period, this was not enough to offset weakness from November 2013 through January 2014.

An overweight to Brazilian local debt was a headwind for the Fund s performance. Brazilian local debt generated poor results during the first part of the reporting period. It later stabilized as demand improved, given attractive yields and expectations for more modest inflation.

Small overweights in Russian debt and the Russian ruble detracted from results. While we continue to have a favorable view of the country overall, these positions performed poorly as investment sentiment weakened given Russia s actions in Ukraine.

Spread is the difference between the yields paid on a government bond (such as US Treasuries) and a security of a different quality, but with the same or similar maturity. When spreads widen, it implies the market is factoring in greater risk of default for the lower rated security; conversely, when spreads tighten, the market is factoring in less risk. Such movements in spreads generally result in changes in market prices for such securities.

Portfolio adjustments

Several adjustments were made to the portfolio during the reporting period.

In March, we increased the Fund s allocation to Russia, while paring its exposure to Ukraine, as we found the former to be more attractively valued. Russia remains a large part of the Index (9.4% as of April 30, 2014) and, while we continue to maintain a constructive view on its debt given strong credit metrics, we are closely monitoring developments in Ukraine.

In January, we reduced the Fund s exposure to Brazilian local debt and kept our exposure to the Brazilian real at neutral.

As discussed, we moderated the Fund s allocation to Argentina in late 2013/early 2014, moving from an overweight to an underweight position.

Use of derivatives

The Fund continued to utilize a number of instruments to manage its overall currency exposure. Currency forwards were among the most commonly utilized derivative instruments. (A currency forward is an agreement between two parties to exchange a certain amount in currencies at a certain rate at a future date.) During the reporting period, the Fund s overall currency management strategy detracted from results.

The Fund used various types of credit-related instruments to manage its credit risk across emerging markets. Credit default swaps (a type of credit derivative) and credit linked notes (notes structured to provide exposure to an underlying bond or asset) were utilized to adjust the Fund s exposure to the debt of certain emerging markets countries. Whereas credit default swaps were generally used to adjust the Fund s US dollar-denominated debt exposure, the other instruments were employed almost exclusively to gain access to various local markets. The overall management of US dollar-denominated assets, including derivatives, slightly detracted from performance while local market exposure (i.e., credit linked notes) generally contributed to results.

The Fund engaged in transactions involving interest rate related derivative instruments, including, but not limited to, futures and swaps. Total return swaps also played a role in adjusting the Fund s exposure to local yields. Overall, duration and yield curve management did not meaningfully impact performance during the reporting period.

Outlook

As noted earlier, we maintain a cautious near-term outlook for the emerging markets asset class. Improving growth in developing countries could have a positive impact on emerging market exports. However, this has yet to occur. In addition, valuations in the asset class have become less attractive given spread widening in recent months.

While certain geopolitical issues have been priced into the market, in our view, we expect to see continued periods of elevated volatility. That being said, the potential impact of higher rates in the US could be somewhat more muted in 2014 versus last year, as the Federal Reserve has telegraphed its intention to taper its asset purchases. Within the asset class, we currently feel US dollar-denominated debt should outperform local debt for the year as a whole.

We thank you for your continued support and welcome any comments or questions you may have. For additional information regarding your fund, please contact your financial advisor, or visit us at www.ubs.com/globalam-us.

Sincerely,

Mark E. Carver Uwe Schillhorn, CFA

Past performance does not predict future performance. The return and value of an investment will fluctuate so that an investor s shares, when sold, may be worth more or less than their original cost. The Fund s net asset value (NAV) returns assume, for illustration only, that dividends and other distributions, if any, were reinvested at the NAV on the payable dates. The Fund s market price returns assume that all dividends and other distributions, if any, were reinvested at prices obtained under the Fund s Dividend Reinvestment Plan. Returns for the period of less than one year have not been annualized. Returns do not reflect the deduction of taxes that a shareholder would pay on Fund dividends and other distributions, if any, or on the sale of Fund shares.

Lipper peer group data calculated by Lipper Inc.; used with permission. The Lipper median is the return of the fund that places in the middle of the peer group. Lipper classifies the Fund in its Emerging Markets Hard Currency Debt

¹ The Global High Income Fund Index is an unmanaged index compiled by UBS Global Asset Management (Americas) Inc. constructed as follows: from the Fund s inception until 12/31/93: 100% J.P. Morgan Emerging Markets Bond Index (EMBI); from 01/01/94 to 11/05/06: 100% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global); from 11/06/06 to 03/31/08: 70% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) and 30% J.P. Morgan Government Bond Index-Emerging Markets Diversified (GBI-EM Diversified); from 04/01/08 to 05/31/08: 50% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) and 50% J.P. Morgan Government Bond Index-Emerging Markets Diversified (GBI-EM Diversified); from 06/01/08 to present: 50% J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) and 50% J.P. Morgan Government Bond Index-Emerging Markets Global Diversified (GBI-EM Global Diversified). Investors should note that indices do not reflect the deduction of fees and expenses.

² The J.P. Morgan Emerging Markets Bond Index Global (EMBI Global) is an unmanaged index which is designed to track total returns for US dollar-denominated debt instruments issued by emerging market sovereign and quasi-sovereign entities: Brady bonds, loans and Eurobonds. Investors should note that indices do not reflect the deduction of fees and expenses.

Funds category, which includes both leveraged and non-leveraged closed-end funds that seek either current income or total return by investing primarily in emerging market debt securities.

Any Fund performance information reflects the deduction of the Fund s fees and expenses, as indicated in shareholder reports, such as investment advisory and administration fees, custody fees, exchange listing fees, etc. It does not reflect any transaction charges that a shareholder may incur when (s)he buys or sells shares (e.g., a shareholder s brokerage commissions).

Investing in the Fund entails specific risks, such as interest rate risk and the risks associated with investing in the securities of issuers in emerging market countries. The value of the Fund s investments in foreign securities may fall due to adverse political, social and economic developments abroad and due to decreases in foreign currency values relative to the US dollar. Investments in emerging market issuers may decline in value because of unfavorable government actions, greater risks of political instability or the absence of accurate information about emerging market issuers. Further detailed information regarding the Fund, including a discussion of principal objectives, principal investment strategies and principal risks, may be found in the fund overview located at http://www.ubs.com/closedendfunsinfo. You may also request copies of the fund overview by calling the Closed-End Funds Desk at 888-793 8637.

¹ Prices and other characteristics will vary over time.

Duration is a measure of price sensitivity of a fixed income investment or portfolio (expressed as % change in price) to a 1 percentage point (i.e., 100 basis points) change in interest rates, accounting for optionality in bonds such as prepayment risk and call/put features.

- ³ Breakdown represents a percentage of market value as of dates indicated. Forward foreign currency contracts are reflected at unrealized appreciation/depreciation; this may not align with the risk exposure described in the portfolio commentary section of the preceding shareholder letter which reflects forward foreign currency contracts based on contract notional amount. As of the most recent period end, April 30, 2014, the Fund maintained a risk exposure to non-US dollar currencies equal to approximately 55% of the Fund.
- ⁴ Weightings represent percentage of net assets as of the dates indicated. The Fund s portfolio is actively managed and its composition will vary over time.
- beightings represent percentages of net assets as of the dates indicated. The Funds portfolio is actively managed and its composition will vary over time. Credit quality ratings shown are based on those assigned by Standard & Poors Financial Services LLC, a part of McGraw-Hill Financial (S&P), to individual portfolio holdings. S&P is an independent ratings agency. Ratings reflected represent S&P individual debt issue credit ratings. While S&P may provide a credit rating for a bond issuer (e.g., a specific company or country); certain issues, such as some sovereign debt, may not be covered or rated and therefore are reflected as non-rated for the purposes of this table. Credit ratings range from AAA, being the highest, to D, being the lowest, based on S&Ps measures; ratings of BBB or higher are considered to be investment grade quality. Unrated securities do not necessarily indicate low quality. Further information regarding S&Ps rating methodology may be found on its website at www.standardandpoors.com. Please note that any references to credit quality made in the commentary above may reflect ratings based on multiple providers (not just S&P) and thus may not align with the data represented in this table.
