Huaneng Power International, Inc.
Huaneng Building,
6 Fuxingmennei Street,
Xicheng District,
Beijing, 100031 PRC

This Form 6-K consists of:

An announcement regarding the power generation within China during the first three quarters of 2012 by Huaneng Power International, Inc. (the “Registrant”), made by the Registrant on October 16, 2012.

Document 1

Hong Kong Exchanges and Clearing Limited and The Stock Exchange of Hong Kong Limited take no responsibility for the contents of this document, make no representation as to its accuracy or completeness and expressly disclaim any liability whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this document.

POWER GENERATION WITHIN CHINA
DECREASES BY 5.40% FOR THE FIRST
THREE QUARTERS OF 2012

This announcement is made pursuant to Rules 13.09(1) and (2) of the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited.

Huaneng Power International, Inc. (the “Company”) announced its power generation for the first three quarters of 2012.

According to the Company’s preliminary statistics, as of 30 September 2012, the Company’s total power generation within China on consolidated basis amounted to 223.662 billion kWh, representing a decrease of 5.40% over the same period last year; accumulated electricity sold amounted to 210.916 billion kWh, representing a decrease of 5.33% over the same period last year.

The decrease in power generation of the Company was mainly attributable to the following reasons:

1. Affected by the slower economic growth nationwide and the weak demand for electricity, the power generation across the country grew by only approximately 3%. The growth of power generation in the areas where the Company’s power plants are located increased by 0.74% on consolidated basis, and the power generation by coal-fired generating plants decreased by over 3.5% on consolidated basis over the same period last year.
 2. The average capacity growth rate of the Company for the first three quarters of 2012 was
-

2.4 percentage points lower than that in the locations where the Company's power plants are situated, which affected the Company's share in the power generation market.

3. During the period from May to September 2012, there had been a rich supply of water to hydropower plants in the provinces and municipalities of Hunan, Jiangxi, Chongqing, Fujian, Gansu and Yunnan, etc., leading to a very high loading rate of hydropower units. In particular, there had been a sharp increase in the hydropower generation provided to Guangdong from Three Gorges, Yunnan and Guizhou. The rise of hydropower generation narrowed the demand for coal-fired power generation in the provinces where hydropower is generated or provided, and significantly affected the Company's generation output.
4. The long-term suspension of the coal mines in the surrounding areas of Yunnan Diandong due to safety accidents in the first quarter of this year resulted in tense supply of coal to the Company's two power plants in Diandong, and affected electricity production of the Company.

The power generation and electricity sold by each of the Company's domestic power plants for the first three quarters of 2012 are listed below (in billion kWh):

Domestic Power Plant	Power generation for the first three quarters of 2012	Power generation for the first three quarters of 2011	Change	Electricity sold for the first three quarters of 2012	Electricity sold for the first three quarters of 2011	Change
