AVK I Advent Claymore Convertible Securities and Income Fund

Dear Shareholder |

Tracy V. Maitland
President and Chief Executive
Officer

We thank you for your investment in the Advent Claymore Convertible Securities and Income Fund (the “Fund”). This report covers the Fund’s performance for the semiannual period ended April 30, 2010.

Advent Capital Management, LLC serves as the Fund’s Investment Adviser. Based in New York, New York, with additional investment personnel in London, England, Advent is a credit-oriented firm specializing in the management of global convertible, high-yield and equity securities across three lines of business—long-only strategies, hedge funds and closed-end funds. As of April 30, 2010, Advent managed approximately \$5.25 billion in assets.

Claymore Securities, Inc. (“Claymore”) serves as the Servicing Agent to the Fund. Claymore Securities, Inc. is an affiliate of Claymore Advisors, LLC, the Fund’s Administrator. Claymore and its associated entities are wholly-owned subsidiaries of Guggenheim Partners, LLC (“Guggenheim Partners”), a global diversified financial services firm with more than \$100 billion in assets under supervision. Claymore Securities, Inc. offers strategic investment solutions for financial advisors and their clients. In total, Claymore entities provide supervision, management, or servicing on approximately \$15.9 billion in assets as of March 31, 2010.

The Fund’s investment objective is to provide total return through a combination of capital appreciation and current income. Under normal market conditions, the Fund will invest at least 80% of its managed assets in a diversified portfolio of convertible securities and non-convertible income securities. Under normal market conditions, the Fund will invest at least 60% of its managed assets in convertible securities and up to 40% in lower grade, non-convertible income securities.

All Fund returns cited—whether based on net asset value (“NAV”) or market price—assume the reinvestment of all distributions. For the six-month period ending April 30, 2010, the Fund generated a total return based on market price of 28.27% and a return of 22.56% based on NAV.

As of April 30, 2010, the Fund’s market price of \$17.64 represented a discount of 8.79% to NAV of \$19.34. As of October 31, 2009, the Fund’s market price of \$14.24 represented a discount of 12.53% to NAV of \$16.28. The market value of the Fund’s shares fluctuates from time to time, and it may be higher or lower than the Fund’s NAV.

In each month from November 2009 through April 2010, the Fund paid a monthly distribution of \$0.0939 per common share. The current monthly distribution represents an annualized distribution rate of 6.39% based upon the last closing market price of \$17.64 as of April 30, 2010. There is no guarantee of any future distributions or that the current returns and distribution rate will be maintained.

We encourage shareholders to consider the opportunity to reinvest their distributions from the Fund through the Dividend Reinvestment Plan (“DRIP”), which is described in detail on page 28 of this report. When shares trade at a discount to NAV, the DRIP takes advantage of the discount by reinvesting the monthly dividend distribution in common shares of the Fund purchased in the market at a price less than NAV. Conversely, when the market price of the Fund’s common shares is at a premium above NAV, the DRIP reinvests participants’ dividends in newly-issued common shares at NAV, subject to an Internal Revenue Service (“IRS”) limitation that the purchase price cannot be more than 5% below the market price per share. The DRIP provides a cost-effective means to accumulate additional shares and enjoy the benefits of compounding returns over time. Since the Fund endeavors to maintain a steady monthly distribution rate, the DRIP plan effectively provides an income averaging technique, which causes

Semiannual Report | April 30, 2010 | 3

AVK | Advent Claymore Convertible Securities and Income Fund | Dear Shareholder continued

shareholders to accumulate a larger number of Fund shares when the share price is depressed than when the price is higher.

The following Questions & Answers section provides more information about the factors that affected the Fund's performance.

We are honored that you have chosen the Advent Claymore Convertible Securities and Income Fund as part of your investment portfolio. For the most up-to-date information on your investment, please visit the Fund's website at www.claymore.com/avk.

Sincerely,
Tracy V. Maitland
President and Chief Executive Officer of the Advent Claymore Convertible Securities and Income Fund

AVK | Advent Claymore Convertible Securities and Income Fund | Questions & Answers

Questions & Answers |

Advent Claymore Convertible Securities and Income Fund (the “Fund”) is managed by a team of seasoned professionals at Advent Capital Management, LLC, (“Advent”), led by Tracy V. Maitland, Advent’s President and Chief Investment Officer. In the following interview, Mr. Maitland discusses the convertible securities and high-yield markets and the performance of the Fund during the six-month period ended April 30, 2010.

Will you remind us of this Fund’s objective and how you seek to achieve it?

The Fund’s investment objective is to provide total return through a combination of capital appreciation and current income. An important goal of the Fund is to provide total returns comparable with equities by using higher yielding and typically less volatile convertible securities.

Under normal market conditions, the Fund will invest at least 80% of its managed assets in a diversified portfolio of convertible securities and non-convertible income securities. Under normal market conditions, the Fund will invest at least 60% of its managed assets in convertible securities and may invest up to 40% in lower grade, non-convertible income securities, although the portion of the Fund’s assets invested in convertible securities and non-convertible income securities will vary from time to time consistent with the Fund’s investment objective, changes in equity prices and changes in interest rates and other economic and market factors. The Fund expects to invest approximately 70% of its assets in lower-grade securities, however, from time to time, it is possible that all of the Fund’s assets may be invested in lower-grade securities. During periods of very high market volatility, the Fund may not be invested at these levels.

More than half of the convertible market and a large portion of the Fund’s convertible investments are in securities issued by growth companies, particularly companies within the health care and technology sectors. Growth companies generally issue convertible bonds or convertible preferred stocks as a means of raising capital to build their businesses. Convertibles represent something of a hybrid between equity and debt as a way to raise capital; convertibles generally have lower interest rates than non-convertible bonds, but entail less dilution than issuing common stock. Convertible preferreds are often issued by financial companies in order to raise capital while keeping their credit ratings higher than if they offered bonds. This is because issuing bonds would increase the proportion of debt on an issuer’s balance sheet, possibly triggering a downgrade in credit rating, while preferred stock is classified as equity.

The Fund’s ability to allocate among convertibles and high-yield bonds, also known as “junk” bonds, helps provide diversification at an asset, sector and security level. Among the attractions of convertible securities are that they generally offer a yield advantage over common stocks; they have tended to capture much of the upside when equity prices move up in stronger markets; and the yield advantage along with bond-like characteristics has historically provided inherent downside protection in weaker markets. However, there is no assurance that convertible securities will participate significantly in any upward movement of the underlying common stock or that they will provide protection from downward movements.

Please tell us about the economic and market environment over the last six months.

The economic recovery that began in 2009 appeared to solidify and strengthen in the first few months of 2010. The early stages of the recovery were driven mainly by monetary and fiscal stimulus and an upturn in the inventory cycle. More recently, activity appears to be more sustainable, with improving conditions in the labor market, firming aggregate demand and reviving confidence. In late April, the Bureau of Economic Analysis made a preliminary announcement that real gross domestic product expanded at an annual rate of 3.2% in the first quarter of 2010, and most estimates call for growth in this same range for the remainder of the year. Corporate earnings have been surprisingly strong.

Following the financial crisis of 2008, in the first quarter of 2009 the credit markets began a dramatic recovery and equities began to move up sharply. The bullish market conditions during most of 2009 and the early months of 2010 were almost a mirror image of the bearish market conditions of 2008. In retrospect, the market plunge in 2008 set the stage for the strong rebound in 2009, which has continued in 2010, and convertible securities were among the best performing asset classes.

The total return of the Merrill Lynch All U.S. Convertibles Index for the six-month period ended April 30, 2010, was 16.28%. The Standard & Poor's 500 Index, which is generally regarded as a representation of the broad stock market, returned 15.66% for the same period. The Barclays Capital US Aggregate Bond Index, which measures the return of the high-quality U.S. bond market as a whole, returned 2.54% for the six-month period. Return of the Merrill Lynch High Yield Master II Index, which measures performance of the high-yield bond market, was 11.65% for the six months ended April 30, 2010.

How did the Fund perform in this environment?

Market conditions during the six months ended April 30, 2010, were nearly ideal for the Fund, which seeks equity-like returns with a focus on income by investing at least 60% of the Fund's assets in convertible securities, under normal conditions. Beginning in March 2009, as equities rebounded and the credit markets staged a dramatic recovery, convertibles enjoyed very high returns. During the first half of the Fund's 2010 fiscal year, the Fund significantly outperformed convertibles, high-yield securities and equities, as measured by the index returns cited above. The Fund also performed better than most other closed-end convertible funds, in large part because it was heavily invested in convertible securities, while some competing funds had more emphasis on high-yield bonds, which performed well, but not as well as convertibles. The Fund's use of leverage contributed further to higher income and a high total return during a period of very low short-term interest rates and strong markets. Past

Semiannual Report | April 30, 2010 | 5

AVK | Advent Claymore Convertible Securities and Income Fund | Questions & Answers continued

performance is not a guarantee of future results. The use of leverage, which contributed to performance during this period, can impede performance when the cost of leverage is higher than the returns generated by the Fund's investments.

For the six-month period ending April 30, 2010, the Fund generated a total return based on market price of 28.27% and a return of 22.56% based on NAV. As of April 30, 2010, the Fund's market price of \$17.64 represented a discount of 8.79% to NAV of \$19.34. As of October 31, 2009, the Fund's market price of \$14.24 represented a discount of 12.53% from NAV of \$16.28. The market value of the Fund's shares fluctuates from time to time and it may be higher or lower than the Fund's NAV. All Fund returns cited—whether based on net asset value ("NAV") or market price—assume the reinvestment of all distributions.

What were the major investment decisions that affected the Fund's performance?

An important reason for the Fund's strong performance was its heavy investment in convertible securities as opposed to high-yield bonds and other more purely income vehicles. As the name of the Fund suggests, it is primarily a convertible fund, although it is permitted to invest up to 40% in various income-producing securities. During the six months ended April 30, 2010, the Fund's investment in high-yield securities was maintained at approximately 14%, significantly lower than the permitted weight in these securities. This was balanced by approximately 80% in convertible securities. The decision to emphasize convertible securities contributed meaningfully to return, since convertibles performed much better than high-yield bonds during the six-month period.

Also positive for return over this period was the Fund's longstanding emphasis on the health care sector. A particularly strong weight in health care over the past two years has been quite beneficial because there really has been no recession in health care. The Fund's health care companies have generated strong cash flow and maintained strong balance sheets, but their stocks and convertibles have often been undervalued because of concerns about health care reform. Now that health care reform has become a reality, higher health care expenditures in the United States are likely to contribute further to what is already a growth business. Among the health care holdings that contributed strongly to performance over the six-month period were a convertible preferred of Mylan, Inc. (1.7% of long-term investments), a global pharmaceutical company, and a convertible bond of Teva Pharmaceutical Industries LLC (1.7% of long-term investments), the world's largest generic drug company.

Another sector in which the Fund has a significant weight is financials. Securities of financial companies hurt the Fund's performance in 2008, when they were the biggest victims of the financial panic. Since then, stocks of financial companies performed quite well based on improving fundamentals as well as recovery from extremely low levels during the worst of the financial crisis. The markets have recognized the turnaround in the major banking companies and the Fund has participated very significantly. For the first half of the 2010 fiscal year, the Fund's largest returns came from warrants of Bank of America Corporation (1.5% of long-term investments) and from a Citigroup Inc. convertible preferred (1.7% of long-term investments). Both of these companies are large U.S.-based banks. Some of the Fund's positions in the financial sector have been reduced recently, enabling the Fund to realize some of the profits in these holdings.

Warrants such as the Bank of America warrants held by the Fund are often used, in essence, like a synthetic convertible in the sense that the portfolio's position in warrants has been balanced by some cash and also some positions in extremely defensive convertible securities. Warrants typically have an asymmetry that is somewhat akin

to convertibles in that they tend to capture more of the upside than the downside, especially when they have a few years to run and when the underlying stock is volatile. Hence, holding warrants along with low-volatility, bond-like investments, creates an asymmetric profile of potential investment returns that is akin to that of a convertible security.

Another major contributor to the Fund's strong performance was a convertible bond of United States Steel Corp. (no longer held in the portfolio at period end). Many industrial stocks such as U.S. Steel have done very well during this period of recovery, and the steel business is influenced by continued heavy demand in China. The Fund's managers sold these bonds at more than double their par value; the bonds soared in price because the stock into which they are convertible moved up sharply. When a bond is selling far above its face value, it is generally eliminated from the portfolio because there is no longer sufficient downside protection. Such "in-the-money" convertibles eventually behave much like stocks, with high volatility and significant downside risk.

Also positive was auto manufacturer Ford Motor Company (2.1% of long-term investments). This is a highly leveraged company that is very sensitive to overall economic conditions, and its new products have been surprisingly well received. Ford has benefited from a combination of the company doing well and the sharp recovery in the economy.

In the interest of balance, it is essential to acknowledge holdings that detracted from performance, but actually there were very few and the losses they generated were relatively small. The top 10 contributors to performance each added \$2 million to \$5 million to returns, while the 10 greatest detractors each reduced return by less than \$300,000. Of course, this strong performance mainly reflects a very strong market.

The biggest detractor was a convertible bond of GMX Resources, Inc. (0.4% of long-term investments), an oil and gas drilling and exploration company. This is a highly leveraged company that has been hurt by weak natural gas prices.

6 | Semiannual Report | April 30, 2010

AVK | Advent Claymore Convertible Securities and Income Fund | Questions & Answers continued

How has the Fund's leverage strategy affected performance?

The Fund utilizes leverage (borrowing) as part of its investment strategy, to finance the purchase of additional securities that provide increased income and potentially greater appreciation potential to common shareholders than could be achieved from a portfolio that is unleveraged. The Fund currently implements its leverage strategy through the issuance of Auction Market Preferred Shares ("AMPSSM"). Since January 14, 2009, the Fund's leverage has been maintained at \$262 million.

The Fund has six series of AMPS, three that auction each week and three that auction every 28 days. The broad auction-rate preferred securities market remains essentially frozen, as it has been since February 2008. The auctions for nearly all auction-rate preferred shares, including those issued by the Fund, continue to fail. Investors need to be aware that a failed auction is not a default, nor does it require the redemption of a fund's auction-rate preferred shares. Provisions in the offering documents of the Fund's AMPS provide a mechanism to set a maximum rate in the event of a failed auction, and, thus, investors will continue to be entitled to receive interest payments for holding these AMPS. This maximum rate is determined based upon a multiple of or a spread to LIBOR, whichever is greater. During the six-month period ended April 30, 2010, established maximum rates were based on a spread of 125 basis points over the applicable LIBOR rates, with the maximum rates ranging from 1.46% to 1.51%.

The Fund will continue to evaluate the benefits and effects of leverage on the Fund, as well as explore other types of leverage. Given the very low interest rates that have been established for the Fund's AMPS over the last several months, the leverage has helped to create capital appreciation in the Fund's portfolio and has contributed to income available for distributions to common shareholders, since the portfolio is yielding more than the cost of leverage.

There is no guarantee that the Fund's leverage strategy will be successful, and the Fund's use of leverage may cause the Fund's NAV and market price of common shares to be more volatile. Leverage adds value only when the total return on securities purchased exceeds the cost of leverage.

Please discuss the Fund's distributions during the last six months.

In each month from November 2009 through April 2010, the Fund paid a monthly distribution of \$0.0939 per common share. The current monthly distribution represents an annualized distribution rate of 6.39% based upon the last closing market price of \$17.64 as of April 30, 2010. There is no guarantee of any future distributions or that the current returns and distribution rate will be maintained.

What is the current outlook for the markets and the Fund?

The Fund's management team continues to see opportunities in convertible securities. Although credit spreads have narrowed dramatically from the panic in late 2008, credit spreads on high-yield securities remain somewhat wider than the historical norm—which suggests potential for further spread tightening, particularly in the event of continued economic recovery while the Federal Reserve maintains record-low short-term interest rates. Moreover, there is potential for credit spreads to become tighter than the historical norms—which would tend to drive up the market prices of convertibles and high-yield investments.

A key underpinning of convertibles—as well as high-yield bonds and other corporate credits—is the reopening of the capital markets last year. There has been much publicity about banks’ reluctance to lend and banks’ tightened lending standards. But large public corporations borrow from the public capital markets, and the public capital markets reopened early in 2009. The markets have continued to accommodate new issues of high-yield bonds and convertible securities. The open new issue market enhances the creditworthiness of essentially all issuers because it provides refinancing of existing credits at reasonable interest rates. (At the height of the credit panic late in 2008, there were no new issues of convertibles or high-yield bonds. Many corporate bond issuers were in the same situation as homeowners with mortgages who were unable to refinance.)

There is also further potential in equities, especially considering that key stock market indices have not yet recovered to former highs. The interest-rate environment is propitious for equities. Indeed, periods of low short-term interest rates (set by the Federal Reserve) and periods of tightening corporate credit spreads have historically been followed by periods of rewarding stock market returns. Continued strength in equities is likely to lead to rewarding returns from convertible securities.

Despite this optimism about market prospects, the Fund’s investment approach is risk-averse. As the markets have recovered, the Fund’s managers have begun to place greater emphasis on income and on downside protection. Recent investments include convertible bonds that are trading near “bond value” (i.e., are trading for little more than their estimated value if they were “straight” nonconvertible bonds) and high-yield bonds of companies considered to be sound. Recent purchases have also included convertible preferred shares, which often provide a potentially rewarding combination of relatively high yields, relatively strong sensitivity to the underlying stocks, and relatively good quality. Historically, convertible preferreds have often been issued by financial companies as a way to boost capital. Many financial stocks appear undervalued, and an environment of low short-term interest rates generally results in enhanced profitability of financial companies.

History indicates that convertible securities as an asset class represent a low-risk means of obtaining equity-like returns. Convertible securities typically yield more than common stocks and capture much of the upside when common stocks rise but

AVK | Advent Claymore Convertible Securities and Income Fund | Questions & Answers continued

tend to lose less than common stocks when equity markets are weak. A period of uncertainty such as the present appears to be an ideal time to invest in convertible securities as a way to maintain the potential for equity-like returns while entailing less downside risk than outright ownership of common stocks. While past performance does not guarantee future returns, key convertible indices have performed as well or better than equity indices over the long term.

The conversion premium reflects the market price of a convertible relative to the market value of the common shares into which the convertible security can be converted.

For example, a bond trading at a par value of \$1,000 that is convertible into 20 shares of common stock trading at \$40 would have a conversion premium of 25% over its conversion value of \$800. The lower the conversion premium, the more upside there is for convertible investors. If the stock performs poorly, the convertible normally provides downside protection based on its yield and its fixed-income value.

Index Definitions

Indices are unmanaged and it is not possible to invest directly in any index.

The Merrill Lynch All U.S. Convertibles Index is comprised of more than 500 issues of convertible bonds and convertible preferred shares of all qualities.

The Barclays Capital US Aggregate Bond Index covers the U.S. dollar-denominated, investment-grade, fixed rate, taxable bond market of SEC-registered securities. The Index includes bonds from the U.S. Treasury, government-related, corporate, mortgage-backed securities (agency fixed-rate and hybrid ARM passthroughs), asset-backed securities and collateralized mortgage-backed securities sectors.

Merrill Lynch High Yield Master II Index is a commonly used benchmark index for high yield corporate bonds. It is a measure of the broad high yield market.

AVK Risks and Other Considerations

The views expressed in this report reflect those of the Portfolio Managers and Claymore only through the report period as stated on the cover. These views are subject to change at any time, based on market and other conditions and should not be construed as a recommendation of any kind. The material may also contain forward-looking statements that involve risk and uncertainty, and there is no guarantee they will come to pass. There can be no assurance that the Fund will achieve its investment objectives. The value of the Fund will fluctuate with the value of the underlying securities. Historically, closed-end funds often trade at a discount to their net asset value. The Fund is subject to investment risk, including the possible loss of the entire amount that you invest. Past performance does not guarantee future results.

Convertible Securities. The Fund is not limited in the percentage of its assets that may be invested in convertible securities. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. The market values of convertible securities tend to decline as interest rates increase and, conversely, to increase as interest rates decline. However, the convertible security's market value tends to reflect the market price of the common stock of the issuing company when that stock price is greater than the convertible's "conversion price," which is the predetermined price at which the convertible security could be exchanged for the associated stock.

Synthetic Convertible Securities. The value of a synthetic convertible security will respond differently to market fluctuations than a convertible security because a synthetic convertible security is composed of two or more separate securities, each with its own market value. In addition, if the value of the underlying common stock or the level of the index involved in the convertible component falls below the exercise price of the warrant or option, the warrant or option may lose all value.

Lower Grade Securities. Investing in lower grade securities (commonly known as "junk bonds") involves additional risks, including credit risk. Credit risk is the risk that one or more securities in the Fund's portfolio will decline in price, or fail to pay interest or principal when due, because the issuer of the security experiences a decline in its financial status.

Leverage Risk. Certain risks are associated with the leveraging of common stock. Both the net asset value and the market value of shares of common stock may be subject to higher volatility and a decline in value.

Interest Rate Risk. In addition to the risks discussed above, convertible securities and non-convertible income securities are subject to certain risks, including:

- if interest rates go up, the value of convertible securities and nonconvertible income securities in the Fund's portfolio generally will decline;
- during periods of declining interest rates, the issuer of a security may exercise its option to prepay principal earlier than scheduled, forcing the Fund to reinvest in lower yielding securities. This is known as call or prepayment risk. Lower grade securities have call features that allow the issuer to repurchase the security prior to its stated maturity. An issuer may redeem a lower grade security if the issuer can refinance the security at a lower cost due to declining interest rates or an improvement in the credit standing of the issuer; and

- during periods of rising interest rates, the average life of certain types of securities may be extended because of slower than expected principal payments. This may lock in a below market interest rate, increase the security's duration (the estimated period until the security is paid in full) and reduce the value of the security. This is known as extension risk.

Illiquid Investments. The Fund may invest without limit in illiquid securities. The Fund may also invest without limit in Rule 144A Securities. Although many of the Rule 144A Securities in which the Fund invests may be, in the view of the investment Adviser, liquid, if qualified institutional buyers are unwilling to purchase these Rule 144A Securities, they may become illiquid. Illiquid securities may be difficult to dispose of at a fair price at the times when the Fund believes it is desirable to do so. The market price of illiquid securities generally is more volatile than that of more liquid securities, which may adversely affect the price that the Fund pays for or recovers upon the sale of illiquid securities.

Foreign Securities and Emerging Markets Risk. Investing in non-U.S. issuers may involve unique risks, such as currency, political, economic and market risk. In addition, investing in emerging markets entails additional risk including, but not limited to (1) news and events unique to a country or region (2) smaller market size, resulting in lack of liquidity and price volatility (3) certain national policies which may restrict the Fund's investment opportunities.

Strategic Transactions. The Fund may use various other investment management techniques that also involve certain risks and special considerations, including engaging in hedging and risk management transactions, including interest rate and foreign currency transactions, options, futures, swaps, caps, floors, and collars and other derivatives transactions.

Auction Market Preferred Shares (AMPS) Risk. There also risks associated with investing in Auction Market Preferred Shares or AMPS. The AMPS are redeemable, in whole or in part, at the option of the Fund on any dividend payment date for AMPS, and will be subject to mandatory redemption in certain circumstances. The AMPS will not be listed on an exchange. You may only buy or sell AMPS through an order placed at an auction with or through a broker-dealer that has entered into an agreement with the auction agent and the Fund or in a secondary market maintained by certain broker dealers. These broker-dealers are not required to maintain this market, and it may not provide you with liquidity. The AMPS market continues to remain illiquid as auctions for nearly all AMPS continue to fail. A failed auction is not a default, nor does it require the redemption of a fund's auction-rate preferred shares. Provisions in the Fund's offering documents provide a mechanism to set a maximum rate in the event of a failed auction, and, thus, investors will continue to be entitled to receive payment for holding these AMPS.

In addition to the risks described above, the Fund is also subject to: Management Risk, Market Disruption Risk, and Anti-Takeover Provisions. Please see www.claymore.com/avk for a more detailed discussion about Fund risks and considerations.

(a) Securities are exempt from registration under Rule 144A of the Securities Act of 1933. These securities may be resold in transactions exempt from registration, normally to qualified institutional buyers. At April 30, 2010, these securities amounted to 23.2% of net assets applicable to common shareholders.

(b) Zero coupon bond.

(c) Security is a “step down” bond where the coupon decreases or steps down at a predetermined date.

(d) Floating rate security. The rate shown is as of April 30, 2010.

(e) Security becomes an accreting bond after December 15, 2013 with a 2.0% principal accretion rate.

(f) Non-income producing security.

Ratings shown are per Standard & Poor’s. Securities classified as NR are not rated by Standard & Poor’s.

All percentages shown in the Portfolio of Investments are based on Net Assets Applicable to Common Shareholders unless otherwise noted.

See notes to financial statements.

(a) Based on average shares outstanding during the period.

(b) Total investment return is calculated assuming a purchase of a common share at the beginning of the period and a sale on the last day of the period reported either at net asset value (“NAV”) or market price per share. Dividends and distributions are assumed to be reinvested at NAV for NAV returns or the prices obtained under the Fund’s Dividend Reinvestment Plan for market value returns. Total investment return does not reflect brokerage commissions. A return calculated for a period of less than one year is not annualized.

(c) Annualized.

See notes to financial statements.

Semiannual Report | April 30, 2010 | 17

AVK | Advent Claymore Convertible Securities and Income Fund

Notes to Financial Statements | April 30, 2010 (unaudited)

Note 1 – Organization:

Advent Claymore Convertible Securities and Income Fund (the “Fund”) was organized as a Delaware statutory trust on February 19, 2003. The Fund is registered as a diversified, closed-end management investment company under the Investment Company Act of 1940, as amended.

Note 2 –Accounting Policies:

The preparation of the financial statements in accordance with U.S. generally accepted accounting principles (“GAAP”) requires management to make estimates and assumptions that affect the reported amounts and disclosures in the financial statements. Actual results could differ from these estimates.

The following is a summary of significant accounting policies followed by the Fund.

(a) Valuation of Investments

Securities listed on an exchange are valued at the last reported sale price on the primary exchange on which they are traded. Equity securities for which there are no transactions on a given day are valued at the mean of the closing bid and asked prices. Securities traded on NASDAQ are valued at the NASDAQ Official Closing Price. Equity securities not listed on a securities exchange or NASDAQ are valued at the mean of the closing bid and asked prices. Debt securities are valued by independent pricing services or dealers using the mean of the closing bid and asked prices for such securities or, if such prices are not available, at prices for securities of comparable maturity, quality and type. Exchange-traded options are valued at the closing price, if traded that day. If not traded, they are valued at the mean of the bid and asked prices on the primary exchange on which they are traded. Futures contracts are valued using the settlement price established each day on the exchange on which they are traded. Short-term securities with remaining maturities of 60 days or less at the time of purchase are valued at amortized cost, which approximates market value.

For those securities where quotations or prices are not available, the valuations are determined in accordance with procedures established in good faith by the Board of Trustees. Valuations in accordance with these procedures are intended to reflect each security’s (or asset’s) “fair value”. Such “fair value” is the amount that the Fund might reasonably expect to receive for the security (or asset) upon its current sale. Each such determination should be based on a consideration of all relevant factors, which are likely to vary from one pricing context to another. Examples of such factors may include, but are not limited to: (i) the type of security, (ii) the initial cost of the security, (iii) the existence of any contractual restrictions on the security’s disposition, (iv) the price and extent of public trading in similar securities of the issuer or of comparable companies, (v) quotations or evaluated prices from broker-dealers and/or pricing services, (vi) information obtained from the issuer, analysts, and/or the appropriate stock exchange (for exchange traded securities), (vii) an analysis of the company’s financial statements, and (viii) an evaluation of the forces that influence the issuer and the market(s) in which the security is purchased and sold (e.g. the existence of pending merger activity, public offerings or tender offers that might affect the value of the security). There were no securities fair valued in accordance with such procedures established by the Board of Trustees at April 30, 2010.

GAAP requires disclosure of fair valuation measurements as of each measurement date. In compliance with GAAP, the Fund follows a fair value hierarchy that distinguishes between market data obtained from independent sources (observable inputs) and the Fund’s own market assumptions (unobservable inputs). These inputs are used in determining the value of the Fund’s investments and summarized in the following fair value hierarchy:

Level 1 – quoted prices in active markets for identical securities

Level 2 – quoted prices in inactive markets or other significant observable inputs (e.g. quoted prices for similar securities; interest rates; prepayment speed; credit risk; yield curves)

Level 3 – significant unobservable inputs (e.g. discounted cash flow analysis; non-market based methods used to determine fair value)

Observable inputs are those based upon market data obtained from independent sources, and unobservable inputs reflect the Fund's own assumptions based on the best information available. The various input levels are not an indication of the risk associated with investing in those securities.

Total	\$ 139,706	\$ 547,143	\$ —	\$ 686,849

(b) Investment Transactions and Investment Income

Investment transactions are accounted for on the trade date. Realized gains and losses on investments are determined on the identified cost basis. Dividend income is recorded net of applicable withholding taxes on the ex-dividend date and interest income is recorded on an accrual basis. Discounts or premiums on debt securities purchased are accreted or amortized to interest income over the lives of the respective securities using the effective interest method.

(c) Currency Translation

Assets and liabilities denominated in foreign currencies are translated into U.S. dollars at the mean of the bid and asked price of respective exchange rates on the last day of the period. Purchases and sales of investments denominated in foreign currencies are translated at the exchange rate on the date of the transaction.

The Fund does not isolate that portion of the results of operations resulting from changes in foreign exchange rates on investments from the fluctuations arising from changes in market prices of securities held. Such fluctuations are

included with the net realized and unrealized gain or loss from investments.

Foreign exchange realized gain or loss resulting from the holding of a foreign currency, expiration of a currency exchange contract, difference in exchange rates between the trade date and settlement date of an investment purchased or sold, and the difference between dividends or interest actually received compared to the amount shown in the Fund's accounting records on the date of receipt are included as net realized gains or losses on foreign currency transactions in the Fund's Statement of Operations.

Foreign exchange gain or loss on assets and liabilities, other than investments, are included in unrealized appreciation (depreciation) on foreign currency translations in the Fund's Statement of Operations.

Semiannual Report | April 30, 2010 | 19

AVK | Advent Claymore Convertible Securities and Income Fund | Notes to Financial Statements (unaudited)
continued

(d) Covered Call Options

The Fund may employ an option strategy of writing (selling) covered call options on securities held in the portfolio of the Fund. The Fund uses options as part of a portfolio management or hedging technique to seek to protect against possible adverse changes in the market value of securities held in or to be purchased for the Fund's portfolio, or to protect the value of the Fund's portfolio.

When an option is written, the premium received is recorded as an asset with an equal liability and is subsequently marked to market to reflect the current market value of the option written. These liabilities are reflected as options written in the Statement of Assets and Liabilities. Premiums received from writing options which expire unexercised are recorded on the expiration date as a realized gain. The difference between the premium received and the amount paid on effecting a closing purchase transaction, including brokerage commissions, is also treated as a realized gain, or if the premium is less than the amount paid for the closing purchase transactions, as a realized loss. If a call option is exercised, the premium is added to the proceeds from the sale of the underlying security in determining whether there has been a realized gain or loss.

(e) Swaps

A swap is an agreement to exchange the return generated by one instrument for the return generated by another instrument. The Fund may enter into swap agreements to manage its exposure to interest rates and/or credit risk or to generate income. The swaps are valued daily at current market value and any unrealized gain or loss is included in the Statement of Assets and Liabilities. Gain or loss is realized upon periodic payments and ultimately upon the termination of the swap and is equal to the difference between the Fund's basis in the swap and the proceeds of the closing transaction, including any fees. During the period that the swap agreement is open, the Fund may be subject to risk from the potential inability of the counterparty to meet the terms of the agreement. The swaps involve elements of both market and credit risk in excess of the amounts reflected on the Statement of Assets and Liabilities. Upon termination of a swap agreement, a payable to or receivable from swap counterparty is established on the Statement of Assets and Liabilities to reflect the net gain/loss, including interest income/expense, on terminated swap positions of such amounts with the counterparty upon settlement according to the terms of the swap agreement.

Realized gain (loss) upon termination of swap contracts is recorded on the Statement of Operations. Fluctuations in the value of swap contracts are recorded as a component of net change in unrealized appreciation (depreciation) of swap contracts. Net periodic payments received by the Fund are included as part of realized gains (losses) and, in the case of accruals for periodic payments, are included as part of unrealized appreciation (depreciation) on the Statement of Operations.

(f) Securities Lending

The Fund may lend its securities to broker-dealers and financial institutions. The loans are collateralized by cash or securities at least equal at all times to the market value of the securities loaned. The Fund may bear the risk of delay in recovery of, or loss of rights in, the securities loaned should the borrower of the securities experience financial difficulty. The Fund receives compensation for lending its securities in the form of fees or it retains a portion of interest on the investment of any cash received as collateral. The Fund also continues to receive interest and dividends on the securities loaned, and any gain or loss in the market price of the securities loaned that may occur during the term of the loan will be for the account of the Fund. As of April 30, 2010, the Fund had no securities on loan.

(g) Concentration of Risk

It is the Fund's policy to invest a significant portion of its assets in convertible securities. Although convertible securities do derive part of their value from that of the securities into which they are convertible, they are not considered derivative financial instruments. However, certain of the Fund's investments include features which render them more sensitive to price changes in their underlying securities. Consequently, this exposes the Fund to greater downside risk than traditional convertible securities, but still less than that of the underlying common stock.

(h) Distributions to Shareholders

The Fund declares and pays monthly dividends to common shareholders. These dividends consist of investment company taxable income, which generally includes qualified dividend income, ordinary income and short-term capital gains. Any net realized long-term gains are distributed annually to common shareholders. Dividends and distributions to preferred shareholders are accrued and determined as described in Note 7.

Distributions to shareholders are recorded on the ex-dividend date. The amount and timing of distributions are determined in accordance with federal income tax regulations, which may differ from U.S. generally accepted accounting principles.

20 | Semiannual Report | April 30, 2010

AVK | Advent Claymore Convertible Securities and Income Fund | Notes to Financial Statements (unaudited)
continued

Note 3 – Investment Management Agreement, Servicing Agreement and Other Agreements:

Pursuant to the Investment Management Agreement (the “Agreement”) between the Fund and Advent Capital Management, LLC, the Fund’s investment adviser (the “Advisor”), the Advisor is responsible for the daily management for the Fund’s portfolio of investments, which includes buying and selling securities for the Fund, as well as investment research. The Advisor will receive an annual fee from the Fund based on the average value of the Fund’s Managed Assets, which includes the amount from the issuance of the Preferred Shares. In addition, subject to the approval of the Fund’s Board of Trustees, a pro rata portion of the salaries, bonuses, health insurance, retirement benefits and similar employment costs for the time spent on Fund operations (other than the provision of services required under the Agreement) of all personnel employed by the Advisor who devote substantial time to Fund operations may be reimbursed by the Fund to the Advisor. For the six months ended April 30, 2010, the Advisor was not reimbursed by the Fund for these items. The annual fee will be determined as follows:

- (a) If the average value of the Fund’s Managed Assets (calculated monthly) is greater than \$250 million, the fee will be a maximum amount equal to 0.54% of the average value of the Fund’s Managed Assets. At the inception of the Fund, the Advisor agreed to waive a portion of the management fee from the Fund during the first five years of the Fund’s operations ending April 30, 2008. Thereafter, the Advisor agreed to waive fees at a declining rate. Effective May 1, 2009, the advisory fee waiver was 0.03% of the average Managed Assets. For the six months ended April 30, 2010, the Advisor waived advisory fees of \$102,119. Effective May 1, 2010, the advisory fee waiver was reduced to 0.01% of the average Managed Assets.

Pursuant to a Servicing Agreement between the Fund and Claymore Securities, Inc., the Fund’s servicing agent (the “Servicing Agent”), the Servicing Agent will act as servicing agent to the Fund. The Servicing Agent will receive an annual fee from the Fund, which will be based on the average value of the Fund’s Managed Assets. The fee will be determined as follows:

- (a) If the average value of the Fund’s Managed Assets (calculated monthly) is greater than \$250 million, the fee will be a maximum amount equal to 0.21% of the average value of the Fund’s Managed Assets. At the inception of the Fund, the Servicing Agent agreed to waive a portion of the servicing fee from the Fund during the first five years of the Fund’s operations ending April 30, 2008. Thereafter, the Servicing Agent agreed to waive fees at a declining rate. Effective May 1, 2009, the servicing fee waiver was 0.04% of the average Managed Assets. For the six months ended April 30, 2010, the Servicing Agent waived fees of \$136,159. Effective May 1, 2010, the servicing fee waiver was reduced to 0.01% of the average Managed Assets.

The fee waivers of the Advisor and the Servicing Agent are contractual commitments of more than one year and are not subject to recoupment.

On October 15, 2009, Guggenheim Partners LLC, (“Guggenheim”), a global, diversified financial services firm, and Claymore Group Inc., parent of the Servicing Agent, announced the completion of a previously announced merger. The closing of this transaction took place on October 14, 2009. This transaction resulted in a change-of-control whereby Claymore Group Inc. and its subsidiaries, including the Servicing Agent, became indirect, wholly-owned subsidiaries of Guggenheim. The transaction has not affected the daily operations of the Fund or the Servicing Agent.

The Bank of New York Mellon (“BNY”) acts as the Fund’s custodian, accounting agent, auction agent and transfer agent. As custodian, BNY is responsible for the custody of the Fund’s assets. As accounting agent, BNY is responsible

for maintaining the books and records of the Fund's securities and cash. As auction agent, BNY is responsible for conducting the auction of the preferred shares. As transfer agent, BNY is responsible for performing transfer agency services for the Fund.

Claymore Advisors, LLC provides fund administration services to the Fund. As compensation for its services performed under the Administration Agreement, Claymore Advisors, LLC receives an administration fee payable monthly at the annual rate set forth below as a percentage of the average daily managed assets of the Fund:

Managed Assets	Rate
First \$200,000,000	0.0275%
Next \$300,000,000	0.0200%
Next \$500,000,000	0.0150%
Over \$1,000,000,000	0.0100%

Certain officers and trustees of the Fund are also officers and directors of the Advisor or Servicing Agent. The Fund does not compensate its officers or trustees who are officers of the aforementioned firms.

Semiannual Report | April 30, 2010 | 21

AVK | Advent Claymore Convertible Securities and Income Fund | Notes to Financial Statements (unaudited)
continued

Note 4 – Federal Income Taxes:

The Fund intends to continue to comply with the requirements of Subchapter M of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies. Accordingly, no provision for U.S. federal income taxes is required. In addition, by distributing substantially all of its ordinary income and long-term capital gains, if any, during each calendar year, the Fund can avoid a 4% federal excise tax that is assessed on the amount of the under-distribution.

At April 30, 2010, the cost and related gross unrealized appreciation and depreciation on investments for tax purposes are as follows:

Cost of Investments for Tax Purposes	Gross Tax Unrealized Appreciation	Gross Tax Unrealized Depreciation	Net Tax Unrealized Appreciation on Investments	Net Tax Unrealized Depreciation on Derivatives and Foreign Currency
\$ 607,492,428	\$ 84,935,329	\$ (5,578,414)	\$ 79,356,915	\$ (–)

As of October 31, 2009, the components of accumulated earnings/(losses) (excluding paid-in capital) on a tax basis were as follows:

Undistributed Ordinary Income/(Accumulated Ordinary Loss)	Undistributed Long-Term Gains/(Accumulated Capital Loss)
\$ –	\$(223,595,020)

The differences between book basis and tax basis unrealized appreciation/(depreciation) are attributable to the tax deferral of losses on wash sales and income adjustments for tax purposes on certain convertible securities.

At October 31, 2009, for federal income tax purposes, the Fund had a capital loss carryforward of \$223,595,020 available to offset possible future capital gains. Of the capital loss carryforward, \$96,628,168 is set to expire on October 31, 2016, and \$126,966,852 is set to expire on October 31, 2017.

For the year ended October 31, 2009, the tax character of distributions paid of \$33,021,144 was ordinary income and \$152,176 was return of capital.

For all open tax years and all major jurisdictions, management of the Fund has concluded that there are no significant uncertain tax positions that would require recognition in the financial statements. Open tax years are those that are open for examination by taxing authorities (i.e. generally the last four tax year ends and the interim tax period since then). Furthermore, management of the Fund is also not aware of any tax positions for which it is reasonably possible that the total amounts of unrecognized tax benefits will significantly change in the next twelve months.

Note 5 – Investments in Securities:

For the six months ended April 30, 2010, purchases and sales of investments, excluding short-term securities, were \$238,034,779 and \$224,869,832, respectively.

Note 6 – Derivatives:

(a) Accounting Pronouncement for Derivatives

The Fund is required by GAAP to improve financial reporting about derivative instruments by requiring enhanced disclosures to enable investors to better understand: a) how and why a fund uses derivative instruments, b) how derivative instruments and related hedge fund items are accounted for, and c) how derivative instruments and related hedge items affect a fund's financial position, results of operations and cash flows.

(b) Covered Call Option

The Fund may employ an option strategy of writing (selling) covered call options on securities held in the portfolio of the Fund. The Fund uses options as part of a portfolio management or hedging technique to seek to protect against possible adverse changes in the market value of securities held in or to be purchased for the Fund's portfolio, or to protect the value of the Fund's portfolio.

An option on a security is a contract that gives the holder of the option, in return for a premium, the right to buy from (in the case of a call) or sell to (in the case of a put) the writer of the option the security underlying the option at a specified exercise or "strike" price. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price (in the case of a call) or to pay the exercise price upon delivery of the underlying security (in the case of a put).

continued

There are several risks associated with transactions in options on securities. As the writer of a covered call option, the Fund forgoes, during the option's life, the opportunity to profit from increases in the market value of the security covering the call option above the sum of the premium and the strike price of the call, but has retained the risk of loss should the price of the underlying security decline. The writer of an option has no control over the time when it may be required to fulfill its obligation as writer of the option. Once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its obligation under the option and must deliver the underlying security at the exercise price.

During the six months ended April 30, 2010, there were no written option contracts outstanding.

(c) Swaps

Swap agreements are contracts between parties in which one party agrees to make periodic payments to the other party (the "Counterparty") based on the change in market value or level of a specified rate, index or asset. In return, the Counterparty agrees to make periodic payments to the first party based on the return of a different specified rate, index or asset. Swap agreements will usually be done on a net basis, the Fund receiving or paying only the net amount of the two payments. The net amount of the excess, if any, of each Fund's obligations over its entitlements with respect to each swap is accrued on a daily basis and an amount of cash or highly liquid securities having an aggregate value at least equal to the accrued excess is maintained in an account at the Fund's custodian bank.

Interest rate swap agreements involve the exchange by the Fund with another party of their respective commitments to pay or receive interest. Total return swap agreements involve commitments to receive (and pay) interest over a floating rate (LIBOR) based on a notional amount. To the extent the total return of the security (price changes, interest paid/received, rebate earned on collateral posted by the Fund) is positive, the Fund will receive a payment from the counterparty (or if negative, make a payment to the counterparty).

Credit default swap transactions involve the Fund's agreement to exchange the credit risk of an issuer. A buyer of a credit default swap is said to buy protection by paying periodic fees in return for a contingent payment from the seller if the issuer has a credit event such as bankruptcy, a failure to pay outstanding obligations or deteriorating credit while the swap is outstanding. A seller of a credit default swap is said to sell protection and thus collects the periodic fees and profits if the credit of the issuer remains stable or improves while the swap is outstanding but the seller in a credit default swap contract would be required to pay an agreed-upon amount, which approximates the notional amount of the swap, to the buyer in the event of an adverse credit event of the issuer.

The Fund decreased the volume of activity in swaps during the period ended April 30, 2010, with an average notional balance of approximately \$586,000 during the period ended April 30, 2010.

As of April 30, 2010 there were no swap agreements outstanding.

The following table presents the effect of Derivatives Instruments on the Statement of Operations for the six months ended April 30, 2010.

Effect of Derivative Instruments on the Statement of Operations (amounts in thousands)

	Amount of Realized Gain/(Loss) on Derivatives	
	Swaps	Total
Derivatives not accounted for as hedging instruments		
Credit default contracts	\$(101)	\$(101)

Change in Unrealized (Appreciation)/Depreciation on
Derivatives

	Swaps	Total
Derivatives not accounted for as hedging instruments		
Credit default contracts	\$ 97	\$97

Note 7 – Capital:

Common Shares

The Fund has an unlimited amount of common shares, \$0.001 par value, authorized and 23,580,877 issued and outstanding. In connection with the Fund’s dividend reinvestment plan, the Fund issued no shares during the six month ended April 30, 2010 and 18,019 shares during the year ended October 31, 2009. At April 30, 2010, Advent Capital Management LLC, the Fund’s investment adviser, owned 7,943 shares of the Fund.

Preferred Shares

On June 19, 2003, the Fund's Board of Trustees authorized the issuance of Auction Market Preferred Shares ("AMPS"), as part of the Fund's leverage strategy. AMPS issued by the Fund have seniority over the common shares.

On July 24, 2003, the Fund issued 2,150 shares of Series M7, 2,150 shares of Series T28, 2,150 shares of Series W7 and 2,150 shares of Series TH28, each with a liquidation value of \$25,000 per share plus accrued dividends. In addition, on March 16, 2004, the Fund issued 1,200 shares of Series F7 and 1,200 shares of Series W28 each with a liquidation value of \$25,000 per share plus accrued dividends.

The preferred shares redemptions during the year ended October 31, 2009 and the number of preferred shares outstanding at April 30, 2010 are as follows:

Series	Number of Shares Redeemed October 31, 2009	Amount Redeemed	Shares Outstanding April 30, 2010
M7	102	\$2,550,000	2,048
T28	102	\$2,550,000	2,048
W7	102	\$2,550,000	2,048
W28	56	\$1,400,000	1,144
TH28	102	\$2,550,000	2,048
F7	56	\$1,400,000	1,144

Dividends are accumulated daily at a rate set through an auction process. The broad auction-rate preferred securities market, including the Fund's AMPS, has experienced considerable disruption since mid-February 2008. The result has been failed auctions on nearly all auction-rate preferred shares, including the Fund's AMPS. A failed auction is not a default, nor does it require the redemption of the Fund's AMPS.

Provisions in the AMPS offering documents establish a maximum rate in the event of a failed auction. The AMPS reference rate is the seven-day LIBOR Rate for a dividend period of 7 to 21 days, and the one-month LIBOR Rate for a dividend period of more than 21 days but fewer than 49 days. The maximum rate, for auctions for which the Fund has not given notice that the auction will consist of net capital gains or other taxable income, is the higher of the reference rate times 125% or the reference rate plus 1.25%. Distributions of net realized gains, if any, are made annually.

Management will continue to monitor events in the marketplace and continue to evaluate the Fund's leverage as well as any alternative that may be available.

For the six months ended April 30, 2010, the annualized dividend rates ranged from:

Series	High	Low	At April 30, 2010
M7	1.51%	1.46%	1.51%

Series			
T28	1.50	1.48	1.50
Series			
W7	1.51	1.46	1.51
Series			
W28	1.51	1.48	1.51
Series			
TH28	1.51	1.48	1.51
Series			
F7	1.51	1.46	1.51

The Fund is subject to certain limitations and restrictions while Preferred Shares are outstanding. Failure to comply with these limitations and restrictions could preclude the Fund from declaring any dividends or distributions to common shareholders or repurchasing common shares and/or could trigger the mandatory redemption of Preferred Shares at their liquidation value.

Preferred Shares, which are entitled to one vote per share, generally vote with the common stock but vote separately as a class to elect two Trustees and on any matters affecting the rights of the Preferred Shares.

Note 8 – Indemnifications:

In the normal course of business, the Fund enters into contracts that contain a variety of representations, which provide general indemnifications. The Fund's maximum exposure under these arrangements is unknown, as this would involve future claims that may be made against the Fund that have not yet occurred. However, the Fund expects the risk of loss to be remote.

Note 9 – Recent Accounting Pronouncements:

On January 21, 2010, the FASB issued an Accounting Standard Update, Fair Value Measurements and Disclosures (Topic 820): Improving Disclosures about Fair Value Measurements which provides guidance on how investment assets and liabilities are to be valued and disclosed. Specifically, the amendment requires reporting entities to disclose i) the input and valuation techniques used to measure fair value for both recurring and nonrecurring fair value measurements, for Level 2 or Level 3 positions ii) transfers between all levels (including Level 1 and Level 2) will be required to be disclosed on a gross basis (i.e. transfers out must be disclosed separately from transfers in) as well as the reason(s) for the transfer and iii) purchases, sales, issuances and settlements must be shown on a gross basis in the Level 3 rollforward rather than as one net number. The effective date of the amendment is for interim and annual periods beginning after December 15, 2009 however, the requirement to provide the Level 3 activity for purchases, sales, issuances and settlements on a gross basis will be effective for interim and annual periods beginning after December 15, 2010. At this time the Fund is evaluating the implications of the amendment to ASC 820 and the impact to the financial statements.

Note 10 – Subsequent Events:

On May 3, 2010, the Fund declared a monthly dividend to common shareholders of \$0.0939 per common share. This dividend is payable on May 28, 2010 to shareholders of record on May 14, 2010. On June 1, 2010, the Fund declared a monthly dividend to common shareholders of \$0.0939 per common share. This dividend is payable on June 30, 2010 to shareholders of record on June 15, 2010.
