The RBS US Mid Cap Trendpilot(TM) Exchange Traded Notes (RBS ETNs) are unsecured and unsubordinated obligations of The Royal Bank of Scotland N.V. (RBS NV), and are fully and unconditionally guaranteed by RBS Holdings N.V. (RBS Holdings).

RBS ETNs track the RBS US Mid Cap Trendpilot(TM) Index (USD) TR (the "Index"). The Index utilizes a systematic trend-following strategy to provide exposure to either the SandP MidCap 400(R) Total Return Index (the "Benchmark Index") or the yield on a hypothetical notional investment in 3-month U.S. Treasury bills (the "Cash Rate"). The Index is designed to provide exposure to the Benchmark Index in positive trending markets and exposure to the Cash Rate in negative trending markets using an objective and transparent methodology.

RBS US MID CAP TRENDPILOTTM INDEX METHODOLOGY

If the closing level of the SPTRMDCP Index is at or above its historical 200-business day simple moving average for five consecutive business days

[GRAPHIC OMITTED] A positive trend is established:
The Index will track the Benchmark Index

If the closing level of the SPTRMDCP Index is below its historical 200-business day simple moving average for five consecutive business days

[GRAPHIC OMITTED] A negative trend is established:
The Index will track the Cash Rate

If neither of the above two conditions is satisfied, the trend of the Index will be the same as the trend of the Index on the immediately preceding business day. The Index will implement any trend reversal at the open of trading on the second business day immediately following the business day on which the Index trend switches from positive to negative or from negative to positive, as the case may be.

INDEX PERFORMANCE (RETROSPECTIVELY CALCULATED FOR ALL TIME PERIODS):

You should be aware that because the Index was only created on January 24, 2011, no actual Index information existed before then. All Index information that is presented below was retrospectively calculated as if the Index had been in existence during those periods. All andP MidCap 400(R) Total Return Index and SandP MidCap 400(R) Index data are based on historical performance. The retrospectively calculated and historical index performance should not be taken as any indication of future performance of the Index or the RBS ETNs. The performance information below also does not include the RBS ETN investor fee or any transaction costs or expenses.

COMPARISON OF ANNUAL RETURNS

RISK TO RETURN (12/31/00-12/31/10)

[GRAPHIC OMITTED]

Source: Bloomberg. Average Annual Return in the graph above is derived by taking the sum of the annual return over ten 12-month periods (from Dec. to Dec. year-to-year, from 12/31/00-12/31/10), divided by ten. Average Annualized Volatility refers to the sum of the annualized volatility over ten 12-month periods (from Dec. to Dec. year-to-year, from 12/31/00-12/31/10), divided by ten.

COMPARISON OF CUMULATIVE 3-YEAR ANNUALIZED RETURNS

-- S&P MidCap 400(R) Total Return Index
-- RBS US Mid Cap TrendpilotTM Index

[GRAPHIC OMITTED]

Source: Bloomberg. Cumulative 3-Year Annualized Returns in the graph above illustrates the geometric average annualized return of the Index and the SandP MidCap 400(R) Total Return Index, as applicable, based on the cumulative return of the applicable index over three-year periods (from 12/31 of the third year prior and ending on 12/31 of the year presented), assuming annual compounding. Geometric average annualized return in this case means the constant rate of return applied to each year within the relevant 3 -year period, compounded annually, resulting in the cumulative return of the applicable index over the relevant 3-year period. Please be aware that the

Index did not exist and an investment in the Index was not possible during the time periods presented above. Further, we may redeem the RBS ETNs at any time at our option. If we do so, you may not be able to own any investment in the RBS

*Standard Deviation is a measure of the volatility of an asset, and illustrates the extent of variation (whether higher or lower) that exists from the average of a given set of results. A low standard deviation indicates that the results tend to be very close to the average result (a low degree of volatility). In contrast, a high standard deviation indicates that the results are spread out over a large range of outcomes (a high degree of volatility).

**Maximum drawdown measures the decrease in the value of an asset from its historical highest value in a given period to its lowest value in that period. Maximum drawdown expresses that decrease as a percentage.

CERTAIN RISK CONSIDERATIONS: The RBS ETNs involve risks not associated with an investment in conventional debt securities, including a possible loss of some or all of your investment. The level of the Index must increase by an amount sufficient to offset the aggregate investor fee applicable to the RBS ETNs in order for you to receive at least the principal amount of your investment back at maturity or upon early repurchase or redemption. The Index may underperform the Benchmark Index, and is expected to perform poorly in volatile markets. Liquidity of the market for RBS ETNs may vary over time. The RBS ETNs do not pay interest. Any payment on the RBS ETNs is subject to ability of RBS NV, as the issuer, and RBS Holdings, as the guarantor, to pay their respective obligations when they become due. You should carefully consider whether the RBS ETNs are suited to your particular circumstances before you decide to purchase them. We urge you to consult with your investment, legal, accounting, tax and other advisors with respect to any investment in the RBS ETNs.

The RBS ETNs are not suitable for all investors. You should carefully read the relevant pricing supplement and prospectus, including the more detailed explanation of the risks involved in any investment in the RBS ETNs as described in the "Risk Factors" section of the pricing supplement, before investing.
