The Royal Bank of Scotland Group plc

Statement on the publication of the 2018 Bank of England stress test results

28 November 2018

The Royal Bank of Scotland Group plc ("RBS") notes the announcement made today by the Bank of England ("BoE") regarding the results of its 2018 stress test. The test applied a hypothetical adverse scenario to the Group's balance sheet as at 31 December 2017 and compared the theoretical Common Equity Tier 1 ("CET1") ratio and Tier 1 leverage ratio positions of RBS before and after the impact of strategic management actions.

IFRS 9 Transitional basis

RBS's low point CET1 ratio under the hypothetical adverse scenario would have been 9.6% on a transitional basis pre management actions, excluding dividends and excluding CRD IV restrictions. This is above RBS's 7.3% hurdle rate (please refer to definitions in notes below the table).

RBS's Tier 1 leverage ratio under the hypothetical adverse scenario would have been 5.1% post the impact of strategic management actions. This is above the hurdle rate of 3.59%.

IFRS 9 Non-transitional basis (fully loaded)

RBS's low point CET1 ratio under the hypothetical adverse scenario would have been 9.2% on a fully loaded basis pre management actions, excluding dividends and excluding CRD IV restrictions. This is above RBS's 6.9% hurdle rate (please refer to definitions in notes below the table).

RBS's Tier 1 leverage ratio under the hypothetical adverse scenario would have been 4.8% on a fully loaded basis pre management actions, excluding dividends and excluding CRD IV restrictions. This is above the hurdle rate of 3.25%.

Commenting on the results, Katie Murray, Interim Chief Financial Officer, said:

“I am pleased that we have achieved a clear pass in the Bank of England’s stress test. This result provides confidence that RBS could continue to support its customers and the UK economy, even in the very tough economic conditions modelled in the test. It is a sign of further progress in rebuilding capital in a year when we also resolved our last major legacy issues as well as announcing an annual profit and paying a dividend for the first time in ten years.”

- The low points for the common equity Tier 1 (CET1) ratio and leverage ratio shown in the table do not necessarily
- (a) occur in the same year of the stress scenario and correspond to the year where the minimum stressed ratio is calculated after 'strategic' management actions and before AT1 conversion.
 - (b) The CET1 capital ratio is defined as CET1 capital expressed as a percentage of risk-weighted assets, where these are in line with CRR and the UK implementation of CRD IV via the PRA Rulebook.
 - (c) Tier 1 capital ratio is defined as Tier 1 capital expressed as a percentage of RWAs where Tier 1 capital is defined as the sum of CET1 capital and additional Tier 1 capital in line with the UK implementation of CRD IV.
 - (d) Total capital ratio is defined as total capital expressed as a percentage of RWAs where total capital is defined as the sum of Tier 1 capital and Tier 2 capital in line with the UK implementation of CRD IV.
 - (e) The Tier 1 leverage ratio is Tier 1 capital expressed as a percentage of the leverage exposure measure excluding central bank reserves, in line with the *PRA's Policy Statement PS21/17*.
- The low point year for the non-transitional IFRS 9 basis may differ to the low point year on a transitional IFRS 9
- (f) basis. Non-transitional IFRS 9 hurdle rates are hypothetical. The bank will review its method for calculating these hurdle rates in future years.
 - (g) Corresponds to the same year as the minimum CET1 ratio over the stress scenario after 'strategic' management actions.
 - (h) Corresponds to the same year as the minimum leverage ratio over the stress scenario after 'strategic' management actions.
 - (i) This includes CRD IV distribution restrictions. Where a bank is subject to such restrictions all non-business as usual cuts to distributions subject to CRD IV restrictions will appear in the next column – 'All 'strategic' management actions including CRD IV distribution restrictions'. This should not be interpreted as a judgement by the Bank that any or all of such cuts are conditional on such restrictions.
 - (j) Actuals for end-2017 are shown on the basis of 1 January 2018 in order to incorporate the implementation of IFRS 9.

Additional information:

1. Hurdle rate is Bank specific and set by the PRA.

The projections of RBS's financial performance under hypothetical stress included in this announcement are based on the methodology and calculations of the BoE. This does not represent RBS's projections or base capital plan assumptions.
