Inforte Corp.

Notes to financial statements
(Unaudited)
March 31, 2001

(1) BASIS OF PRESENTATION

The accompanying unaudited financial statements have been prepared by Inforte Corp. ("Inforte") pursuant to the rules and regulations of the Securities and Exchange Commission regarding interim financial reporting. Accordingly, they do not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements and should be read in conjunction with the financial statements and notes thereto for the year ended December 31, 2000 included in Inforte's annual report Form 10K (File No. 333-92325). The balance sheet at December 31, 2000 has been derived from the audited financial statements at that date but does not include all of the information and footnotes required by generally accepted accounting principles for complete financial statements. The accompanying financial statements reflect all adjustments (consisting solely of normal, recurring adjustments) which are, in the opinion of management, necessary for a fair presentation of results for the interim periods presented. The results of operations for the three month periods ended March 31, 2001 are not necessarily indicative of the results to be expected for the full fiscal year. Certain previously reported amounts have been reclassified to conform with current presentation format.

(2) NET INCOME PER COMMON SHARE

Inforte computes basic earnings per share by dividing net income by the weighted average number of common shares outstanding. Diluted earnings per common share is computed by dividing net income by the weighted average number of common shares and dilutive common share equivalents then outstanding.

Three Months Ended March 31,

	2000	2001
	(unaudited)	
Basic weighted average shares	10,767,891	12,719,821
Effect of dilutive stock options	1,664,026	979,761
Diluted common and common equivalent shares	12,431,917	13,699,582

(3) SHORT-TERM AND LONG-TERM MARKETABLE SECURITIES

Inforte considers all investments with maturities of one year or less from the respective balance sheet dates to be short-term marketable securities and all investments with maturities greater than one year from the balance sheet dates to be long-term marketable securities. In accordance with Statement of Financial Accounting Standards No. 115, "Accounting for Certain Investments in Debt and Equity Securities," Inforte has categorized its marketable securities as "available-for-sale."

(4) INCOME TAXES

Inforte's effective tax rate for the March 2001 quarter was 35% compared to 43% for the March 2000 quarter. The lower rate in 2001 is due to the higher percentage of pretax income in 2001 resulting from interest income versus operating income. Generally, a significant portion of Inforte's marketable securities are tax advantaged and reduce the effective tax rate for interest, resulting in interest income having a lower tax rate than operating income. The tax rate for the remainder of 2001 may decline from the March 2001 35% rate if interest income continues to provide the majority of taxable income and we continue to invest significantly in tax-advantaged investments.

(5) STOCKHOLDERS' EQUITY

During the March 2001 quarter, Inforte repurchased 58,500 shares of stock for a total cost of $472,406.

6

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

You should read the following discussion in conjunction with our financial statements, together with the notes to those statements, included elsewhere in this Form 10-Q. The following discussion contains forward-looking statements that involve risks, uncertainties, and assumptions such as statements of our plans, objectives, expectations and intentions. Our actual results may differ materially from those discussed in these forward-looking statements because of the risks and uncertainties inherent in future events that include, but are not limited to, those identified under the caption "Risk Factors" appearing in this 10Q as well as factors discussed elsewhere in this Form 10-Q. Actual results may differ from forward-looking results for a number of reasons, including but not limited to, Inforte's ability to: (i) effectively forecast demand and profitably match our resources with the demand; (ii) attract and retain clients and satisfy our clients' expectations; (iii) recruit and retain qualified professionals; (iv) reliably forecast demand when information technology services spending is less certain; (v) accurately estimate the time and resources necessary for the delivery of our services; and (vi) build and maintain marketing relationships with leading software vendors. Should one or more of these risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those anticipated, estimated or projected. All forward-looking statements included in this document are made as of the date hereof, based on information available to Inforte on the date thereof, and Inforte assumes no obligation to update any forward-looking statements.

Overview

Strategic technology consultancy Inforte Corp. helps create long-term return on investment and sustainable advantages for clients by capitalizing on the convergence of business strategy and technology across the value chain. Inforte delivers strategic technology consulting, comprehensive demand chain management solutions, plus solutions that optimize supply chain integration. Inforte's client advocacy approach and rigorous delivery methodologies have garnered the trust of Global 2000 clients, produced industry-leading project-efficiency metrics and helped Inforte earn references from 100 percent of its clients.

Since our inception in September 1993, we have followed an organic growth model with all growth generated internally rather than through mergers or acquisitions. As of March 31, 2001, we employed 428 people in our offices in Atlanta, Chicago, Dallas, London, Los Angeles, New York and San Francisco. Reflecting the importance we place on employee motivation and ownership, each of our employees is a stock or option holder.

The majority of our revenues are from professional services performed on a fixed-price basis; however, we also perform services on a time-and-materials basis. Typically, the first portion of an engagement involves a strategy project or a discovery phase lasting 30 to 60 days, which we perform on a fixed-price basis. This work enables us to determine with our clients the scope of successive phases for design and implementation, which in total generally last three to nine months, and to decide whether we will perform these additional phases for a fixed price or on a time-and-materials basis. Whether we use fixed pricing or time-and-material pricing depends upon our assessment of the project's risk, and how precisely our clients are able to define the scope of activities they wish us to perform. Fixed prices are based on estimates from senior personnel in our consulting organization who project the length of the engagement, the number of people required to complete the engagement, and the skill level and billing rates of those people. We then adjust the fixed price based on various qualitative risk factors such as the aggressiveness of the delivery deadline and the technical complexity of the solution.

We ask clients to pay 25%-50% of our fixed-price projects in advance to enable us to secure a project team in a timeframe that is responsive to the client's needs. We bill the remainder in advance of the work performed based upon a predetermined billing schedule over the course of the engagement. We do not perform work under milestone-based billing schedules. We recognize revenues from fixed-price contracts on the percentage-of-completion method, based on the ratio of costs incurred to total estimated costs. Amounts billed before we perform

services are classified as deferred revenue. We bill time-and-materials projects twice per month on the 15th and last day of each month. We recognize time-and-materials revenues as we perform the services. We do not include in our revenues the reimbursable expenses we charge to our clients, on either fixed-price or time-and-material projects.

Our revenues and earnings may fluctuate from quarter to quarter based on factors within and outside of our control. These include:

- the variability in market demand for information technology professional services;
- the growth rate of the U.S. economy and the impact that relative economic strength or weakness has on information technology services spending;
- the seasonal spending by our clients
- the length of the sales cycle associated with our service offerings;
- the number, size, and scope of our projects;
- the efficiency with which we deliver projects and use our people;
- the compensation that we pay our people; and
- our ability to keep discretionary expenses within budget.

If revenues do not increase at a rate at least equal to increases in expenses, our results of operations could be materially and adversely affected.

RESULTS OF OPERATIONS

The following table sets forth the percentage of revenues of certain items included in Inforte's statement of income:

	% of Revenue Three months ended March 31, 2000	2001
Revenues	100.0	100.0
Operating expenses:		
Project personnel and related expenses	44.0	52.6
Sales and marketing	12.7	13.2
Recruiting, retention and training	11.4	6.6
Management and administrative	19.9	24.5
Total operating expenses	88.0	97.0
Operating income	12.0	3.0
Interest income, net and other	2.8	7.2
Pretax income	14.7	10.2
Income tax expense	6.3	3.6
Net income	8.4	6.6

Three months ended March 31, 2000 and 2001

Revenues. Revenues increased 14% to $14.1 million for the quarter ended March 31, 2001 from $12.3 million for quarter ended March 31, 2000. This growth reflects the increase in the average revenue per client. For the quarter ended March 31, 2001, we had 40 significant clients with each of these clients contributing $1.4 million to revenue on average on an annualized basis. We had 45 significant clients during the quarter ended March 31, 2000, each contributing $1.1 million to revenue on average on an annualized basis.

Sequentially, revenue declined 19% to $14.1 million in the March 2001 quarter from $17.4 million in the December 2000 quarter. The decline is not typical for

our business, which has historically experienced stronger sequential growth rates in the first half of the year when most clients have access to new budget money. The sequential revenue trend reflects the slower growth rate of the U.S. economy and the negative impact that heightened economic uncertainty has on information technology (IT) spending. Given the current economic environment, we expect revenue for each quarter going forward in 2001 to equal $12.5 million to $14.0 million.

Project personnel and related expenses. Project personnel and related expenses consist primarily of compensation and fringe benefits for our professional employees who deliver consulting services and non-reimbursable project costs. All labor costs for project personnel are included in project personnel and related expenses. These expenses increased 37% to $7.4 million for the quarter ended March 31, 2001, from $5.4 million for quarter ended March 31, 2000. The increase was due to the hiring of additional consulting professionals. We employed 324 consultants on March 31, 2001, up from 250 one year earlier.

Project personnel and related expenses represented 52.6% of revenues for the quarter ended March 31, 2001, compared to 44.0% for the quarter ended March 31, 2000. The increase as a percentage of revenues was due to higher employee compensation in the March 2001 quarter, while revenue per consultant declined, primarily due to lower utilization. Revenue per consultant was $167,000 in the March 2001 quarter, down from $215,000 during the March 2000 quarter. Over the past two quarters, utilization has fallen below our target range of 70-80%. We expect utilization to remain below our target range for the next few quarters, unless we note a substantial positive change in the U.S. economy with a related increase in overall IT spending by our clients. We expect our 2001 quarterly spending on project personnel and related expenses to remain similar or increase as a percentage of revenue from the March 2001 quarter level.

Sales and marketing. Sales and marketing expenses consist primarily of compensation, benefits and travel costs for employees in the market development, practice development and client development groups and costs to execute marketing programs. Sales and marketing expenses increased 19% to $1.9 million for the quarter ended March 31, 2001 from $1.6 million in the same period in 2000. The spending increase was due to the growth in our practice development and client development sales forces and increased marketing personnel. Sales and marketing expenses as a percentage of revenues increased to 13.2% for the quarter ended March 31, 2001 from 12.7% in the first quarter of 2000 as headcount growth exceeded the rate of revenue growth. We expect our 2001 quarterly spending on sales and marketing to remain similar or increase as a percentage of revenue from the March 2001 quarter level.

Recruiting, retention, and training. Recruiting, retention and training expenses consist of compensation, benefits and travel costs for personnel engaged in human resources; costs to recruit new employees; costs of human resources programs; and training costs, including travel and labor costs. These expenses decreased by 34% to $0.9 million for the quarter ended March 31, 2001 from $1.4 million in the first quarter of 2000. The decline was due to a lower hiring rate in 2001 versus 2000, reducing recruiting expenses. During the March 2000 quarter total employees grew by 27% to 326. In the March 2001 quarter total employees declined 3% to 428. Unless we experience a significant change in customer demand, we expect our 2001 quarterly spending on recruiting, retention and training to remain similar to, or possibly decline from, the March 2001 quarter dollar level.

Management and administrative. Management and administrative expenses consist primarily of compensation, benefits and travel costs for management, finance, information technology and facilities personnel, together with rent, telecommunications, audit, and legal costs, and depreciation and amortization of capitalized computers, purchased software and property. These expenses increased 41% to $3.5 million for the quarter ended March 31, 2001 from $2.4 million for the same period in 2000. As a percentage of revenue, management and administrative expenses were 24.5% in the quarter ended March 31, 2001, up from 19.9% for the quarter ended March 31, 2000 as staff and facilities spending grew more rapidly than the rate of revenue growth.

Liquidity and Capital Resources. Cash and marketable securities increased from $83.0 million as of December 31, 2000 to $84.1 million at March 31, 2001. This increase is from cash provided by operating activities of $1.3 million, and from stock option and purchase plans of $0.5 million, offset by purchases of treasury stock of $0.5 million and capital expenditures of $0.2 million.

9

Capital expenditures were primarily for computer equipment and software. We expect that capital expenditures will remain near this minimal level until overall customer demand in our industry begins to grow again.

As of March 31, 2001 our accounts receivable (less deferred revenue) equaled negative 5 days of sales outstanding. However, since December 31, 1997, days of sales outstanding have been as high as 41 days. We believe our current days of sales outstanding is unsustainably low, and we expect it will rise going forward. We do not, however, expect it to rise above normal industry levels of current days of sales outstanding and believe that we will have adequate cash flow to manage our working capital needs in the ordinary course of business.

Inforte believes that its current cash, cash equivalents and marketable securities will be sufficient to meet working capital and capital expenditure requirements for the foreseeable future.

Risk Factors

In addition to other information in this Form 10-Q, the following risk factors should be carefully considered in evaluating Inforte and its business because such factors currently may have a significant impact on Inforte's business, operating results and financial condition. As a result of the risk factors set forth below and elsewhere in this Form 10-Q, and the risk factors discussed in Inforte's other Securities and Exchange Commission filings, and in Inforte's earnings releases, actual results could differ materially from those projected in any forward-looking statements.

RISKS RELATED TO INFORTE

If we fail to identify and successfully transition to the latest and most advanced solutions or keep up with an evolving industry, we will not compete successfully for clients and our profits may decrease.

We focus on providing our clients solutions that employ the latest technologies. If we fail to identify the latest and most advanced solutions, or if we identify but fail to successfully transition our business to these advanced solutions, our reputation and our ability to compete for clients and the best employees could suffer. If we cannot compete successfully for clients, our revenues may decrease. Also, if our projects do not involve the latest and most advanced solutions, they would generate lower fees.

Because our market changes rapidly, some of the most important challenges facing us are the need to:

- o effectively use advanced technologies;
- o continue to develop our strategic and technical expertise;
- o influence and respond to emerging industry standards and other technological changes;
- o enhance our current services; and
- o develop new services that meet changing customer needs.

All of these challenges must be met in a timely and cost-effective manner. We cannot assure you that we will succeed in effectively meeting these challenges.

If we fail to satisfy our clients' expectations, our existing and continuing business could be adversely affected.

10

If we fail to satisfy the expectations of our clients, we could damage our reputation and our ability to retain existing clients and attract new clients. In addition, if we fail to perform our engagements, we could be liable to our clients for breach of contract. Although most of our contracts limit the amount of any damages to the fees we received, we could still incur substantial cost, negative publicity, and diversion of management resources to defend a claim, and as a result, our business results could suffer.

If we are unable to accurately forecast our quarterly revenue our profitability may be reduced.

Recently, the level of spending by clients and potential clients on information technology in the United States has become less certain. We believe the uncertainty stems from the rapid slowing of growth in Gross Domestic Product in the United States that began in the second half of calendar 2000. In some cases the uncertainty has reduced the overall number of projects available for bid. In other cases the uncertainty has resulted in project deferrals, project scope reductions or limited follow-on projects at existing clients. While our revenue forecast methods are sophisticated and have proven accurate historically, we believe the recent environment adds greater risk and uncertainty to our forecasts. If we fail to accurately forecast revenue, our actual results may differ materially from the amounts planned, and our profitability may be reduced.

We may be unable to hire and retain employees who are highly skilled, which would impair our ability to perform client services, generate revenue and achieve profitability

If we are unable to hire and retain highly-skilled individuals, our ability to retain existing business and compete for new business will be harmed. Individuals who have the experience and expertise to perform the services we provide to our clients are limited and competition for these individuals is intense. To attract and retain these individuals, we invest a significant amount of time and money. In addition, we expect that an important component of overall compensation for our employees will continue to be equity. If our stock price does not increase over time, it may be more difficult to retain employees who have been compensated with stock options. Options granted to employees from the IPO date, February 17, 2000, through March 31, 2001 total 1.3 million shares. These recent option grants have exercise prices of $8.56 to $71.82 with an average exercise price of $29.74. Since the current market price for Inforte stock has recently been below this average strike price it may be more difficult to retain employees. If employee retention rates grow to unacceptable levels because compensation is not at competitive rates, Inforte may increase the level of stock option grants or cash compensation. These actions would reduce earnings per share and may cause Inforte to become unprofitable.

If we fail to adequately manage rapid changes in our growth rate, our profitability and cash flow may be reduced or eliminated.

If we cannot keep pace with the rapid changes in our growth rate, we will be unable to effectively match resources with demand, and maintain high client satisfaction, which may eliminate our profitability and our ability to achieve positive cash flow from operations. Our business has grown dramatically over the past several years. For example, our revenue has increased from $13.4 million in 1998, to $30.1 million in 1999 and to $63.8 million in 2000. As a result of the current U.S. economic environment and overcapacity in our industry, however, we expect revenue in 2001 to decline compared to 2000. For 2001 and 2002, our growth rate is highly dependent on the macroeconomic environment, which heavily influences our clients' level of IT services spending. The level of IT spending is subject to rapid positive and negative changes. If the level of IT services spending declines further, we may not be profitable or achieve positive cash flow from operations in 2001 or 2002. If our growth exceeds our expectations, our current resources and infrastructure may be inadequate to handle the growth. Also, our senior management team has limited collective experience managing a public company or a business the current size of Inforte. Additionally, our management team has limited collective experience managing a business during an economic slowdown or recession.

If our marketing relationships with software vendors deteriorate, we would lose their client referrals.

We currently have marketing relationships with software vendors, including Ariba, Blue Martini, i2, Siebel, and Vignette. Although we have historically received a large number of business leads from these software vendors to implement their products, they are not required to refer business to us and they may terminate these relationships at any time. If our relationships with these software vendors deteriorate, we may lose their client leads and our ability to develop new clients could be negatively impacted. Any decrease in our ability to obtain clients may cause a reduction in our revenues.

If we are unable to rapidly integrate third-party software, we may not deliver solutions to our clients on a timely basis, resulting in lost revenues and potential liability.

In providing client services, we recommend that our clients use software applications from a variety of third-party vendors. If we are unable to implement and integrate this software in a fully functional manner for our clients, we may experience difficulties that could delay or prevent the successful development, introduction, or marketing of services. Software often contains errors or defects, particularly when first introduced or when new versions or enhancements are released. Despite internal testing and testing by current and potential clients, our current and future solutions may contain serious defects due to third-party software or software we develop or customize for clients. Serious defects or errors could result in liability for damages, lost revenues, or a delay in implementation of our solutions.

Our revenues could be negatively affected by the loss of a large client or our failure to collect a large account receivable.

At times, we derive a significant portion of our revenue from large projects for a limited number of varying clients. In 1998, our five largest clients accounted for 36% of revenue and our ten largest clients accounted for 56% of revenue. In 1999, our five largest clients accounted for 36% of revenue and our ten largest clients accounted for 55% of revenue. In 2000, our five largest clients accounted for 31% of revenue and our ten largest clients accounted for 46% of revenue. Although these large clients vary from time to time and our long-term revenues do not rely on any one client, our revenues could be negatively affected if we were to lose one of these clients or if we were to fail to collect a large account receivable.

In addition, many of our contracts are short-term and provide that our clients can reduce or cancel our services without incurring any penalty. If our clients reduce or terminate our services, we would lose revenue and would have to reallocate our employees and our resources to other projects to attempt to minimize the effects of that reduction or termination. Accordingly, terminations, including any termination by a major client, could adversely impact our revenues. During 2001 we believe the uncertain economic environment increases the probability that services may be reduced or canceled.

If we estimate incorrectly the time required to complete our projects, we will lose money on fixed-price contracts.

A majority of our contracts are fixed-price contracts, rather than contracts in which the client pays us on a time and materials basis. We must estimate the number of hours and the materials required before entering into a fixed-price contract. Our future success will depend on our ability to continue to set rates and fees accurately and to maintain targeted rates of employee utilization and project quality. If we fail to accurately estimate the time and the resources required for a project, any required increase in the time and resources to complete the project could cause our profits to decline.

Fluctuations in our quarterly revenues and operating results due to cyclical client demand may lead to reduced prices for our stock.

Our quarterly revenues and operating results have fluctuated significantly in the past and we expect them to continue to fluctuate significantly in the future. Historically, we have experienced our greatest sequential growth during the first and second quarters. We typically experience significantly lower sequential growth in the third and fourth quarters. We attribute this to the budgeting cycles of our customers, most of whom have calendar-based fiscal years

and as a result are more likely to incur the expense of our services during the first half of the year. During 2001, we do not expect this normal seasonal growth pattern, and have adjusted our recruiting and spending plans accordingly. Our cautious expectations for 2001 are based upon slower U.S. economic growth that began in the second half of 2000 and business trends during the first four months of 2001. If we are unable to predict the cyclical client demand in a slower growth or distressed economic environment, our expenses may be disproportionate to our revenue on a quarterly basis and our stock price may be adversely affected.

Others could claim that we infringe on their intellectual property rights, which may result in substantial costs, diversion of resources and management attention, and harm to our reputation.

A portion of our business involves the development of software applications for specific client engagements. Although we believe that our services do not infringe on the intellectual property rights of others, we may be the subject of claims for infringement, which even if successfully defended could be costly and time-consuming. An infringement claim against us could materially and adversely affect us in that we may:

- experience a diversion of our financial resources and management attention;
- incur damages and litigation costs, including attorneys' fees;
- be enjoined from further use of the intellectual property;
- be required to obtain a license to use the intellectual property, incurring licensing fees;
- need to develop a non-infringing alternative, which could be costly and delay projects; and
- have to indemnify clients with respect to losses incurred as a result of our infringement of the intellectual property.

Because we are newer and smaller than many of our competitors, we may not have the resources to effectively compete, causing our revenues to decline.

Many of our competitors have longer operating histories, larger client bases, longer relationships with clients, greater brand or name recognition, and significantly greater financial, technical, marketing, and public relations resources than we do. We may be unable to compete with the full-service consulting companies, including the consulting divisions of the largest global accounting firms, who are able to offer their clients a wider range of services. If our clients decide to take their information technology professional services projects to these companies, our revenues may decline. It is possible that in uncertain economic times our clients may prefer to work with larger firms to a greater extent than normal. In addition, new professional services companies may provide services similar to ours at a lower price, which could cause our revenues to decline.

RISKS RELATED TO OUR INDUSTRY

If the rate of adoption of advanced information technology slows substantially, our revenues may decrease.

We market our services primarily to firms that want to adopt Internet-based information technology that provides an attractive return on investment or helps provides a sustainable competitive advantage. Our revenues could decrease if companies decide not to integrate the latest technologies into their businesses due to economic factors, governmental regulations, financial constraints, or other reasons.

Inforte's market research suggests that the level information technology spending in the United States is closely linked with the growth rate of the Gross Domestic Product (GDP). The recent slowdown in the GDP growth rate has caused a slower rate of adoption of advanced information technology by our target clients. We expect information technology spending and Inforte revenue to be highly dependent on the health of the US economy.

If the supply of information technology companies and personnel continues to exceed demand, this may adversely impact the pricing of our projects and our ability to win business.

Beginning in the second half of 2000 many firms in our industry announced significant employee layoffs and lower utilization rates of billable personnel. An oversupply of technology professionals may reduce the price clients are willing to pay for our services. An oversupply may also increase the talent pool for potential clients who may choose to complete projects in-house rather than use an outside consulting firm such as Inforte. Lower utilization rates increase the likelihood that a competitor will reduce their price to secure business in order to improve their utilization rate. The extent to which pricing and our ability to win business may be impacted is a function of both the magnitude and duration of the supply and demand imbalance in our industry.

RISKS RELATED TO THE OWNERSHIP OF OUR COMMON STOCK

Our stock price could be extremely volatile, like many technology stocks.

The market prices of securities of technology companies, particularly information technology services companies, have been highly volatile. We expect continued high volatility in our stock price, with prices at times bearing no relationship to Inforte's operating performance.

Volatility of our stock price could result in expensive class action litigation.

If our common stock suffers from volatility like the securities of other technology companies, we could be subject to securities class action litigation similar to that which has been brought against companies following periods of volatility in the market price of their common stock. Litigation could result in substantial costs and could divert our resources and senior management's attention. This could harm our productivity and profitability.

Officers and directors own a significant percentage of outstanding shares and, as a group, control a vote of stockholders.

As of March 31, 2001 the executive officers and directors set forth below, own approximately 45% of the outstanding shares of our common stock and own individually the percentage set forth opposite their names:

- Philip S. Bligh 20.8%
- Stephen C.P. Mack 18.5%
- Nick Padgett 5.2%

If the stockholders listed above act or vote together with other employees who own significant shares of our common stock they will have the ability to control the election of our directors and the approval of any other action requiring the approval of our stockholders, including any amendments to the certificate of incorporation and mergers or sales of all or substantially all assets, even if the other stockholders perceive that these actions are not in their best interests.

The authorization of preferred stock, a staggered board of directors and supermajority voting requirements will make a takeover attempt more difficult, even if the takeover would be favorable for stockholders.

Inforte's certificate of incorporation and bylaws may have the effect of deterring, delaying or preventing a change in control of Inforte. For example, our charter documents provide for:

o the ability of the board of directors to issue preferred stock and to determine the price and other terms, including preferences and voting rights, of those shares without stockholder approval;

o the inability of our stockholders to act by written consent or to call a special meeting;

o advance notice provisions for stockholder proposals and nominations to the board of directors;

o a staggered board of directors, with three-year terms, which will lengthen the time needed to gain control of the board of directors; and

o supermajority voting requirements for stockholders to amend provisions of the charter documents described above.

We are also subject to Delaware law. Section 203 of the Delaware General Corporation Law prohibits us from engaging in a business combination with any significant stockholder for a period of three years from the date the person became a significant stockholder unless, for example, our board of directors approved the transaction that resulted in the stockholder becoming an interested stockholder. Any of the above could have the effect of delaying or preventing changes in control that a stockholder may consider favorable.

Item 3. QUALITATIVE AND QUANTITATIVE DISCLOSURES ABOUT MARKET RISK

In all categories of cash, cash equivalents and short-term and long term marketable securities, Inforte invests only in securities of high credit quality. All investments bear a minimum Standard & Poor's rating of A1, Moody's investor service rating of P1, or equivalent. Inforte believes that it does not have any material market risk exposure with respect to financial instruments.

PART II. OTHER INFORMATION

Item 1. Legal Proceedings
None

Item 2. Changes in Securities and Use of Proceeds
None

Item 3. Defaults upon Senior Securities
None

Item 4. Submission of Matter to a Vote of Security Holders
None

Item 5. Other Information
None

Item 6. Exhibits and Reports on Form 8-K

(a) Reports on Form 8K

Inforte filed a filed a Form 8-K on January 31, 2001, announcing that on January 24, 2001 the board of directors approved a stock repurchase program that allows the company to buy up to $25 million of Inforte shares. The program has no expiration date and will be used to make periodic purchases at the company's discretion to offset the dilutive impact from the company's stock option and employee stock purchase programs.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized.

Inforte Corp.
